Answer—First. Sore head is caused by fowls being confined in damp, filthy and poorly ventilated quarters. This disease is very contagious and may be introduced into a flock that is kept in the best sanitary condition possible by the introduction of a bird from an infected yard. Where fowls are kept in clean, well ventilated quarters and given the proper food and water diseases are unknown. By the use of carbolic acid as a disinfectant the yards and houses can be easily kept in a healthy state. Use 5 per cent carbolic acid and 95 per cent water. To effect a cure and to keep the disease from spreading the affected birds should be isolated and the following treatment given: Bathe the affected parts with soap and water in order to soften the crusts, and afterward apply a solution of sulphate of copper (bluestone) a dram to half a pint of water. Sulphate of copper has been found destructive to many kinds of fungi, and, therefore, is promising in this disease. Carbolated vaseline can also be used with good results. Tincture of iodine, either by itself or mixed with 10 per cent of carbolic acid, may be used with success, but this remedy is rather severe and should only be applied sparingly and after the others mentioned have proved ineffectual. This local treatment should be accompanied by cleaning and disinfection of the houses, and, if possible, changing to new, uninfected runs. The feeding trough and drinking vessels should be daily washed with boiling water.

2d. Yes.

3d. This is a disease that is puzzling the best medical authorities on poultry in the country, and we are not well enough informed on the matter to be able to give a remedy.

4th. Table scraps may be fed chicks after they are two or three weeks old, providing they are not fed too often or too much.

5th. No.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: We are trying to perfect a new breed of hens. We began this year with one rooster and two pullets which might be brothers and sisters but do not know. The chickens do not seem satisfactory. Supposing we used these chickens another year, which would be best, to mate the pullets with the rooster we used this year, or use a rooster of another breed and then keep selecting the chickens most like the ones we wish each year, or would we stand a chance of getting any chickens like the hens? Please answer in "Questions" and Answers." Please tell me what is meant by pullet mating and cockerel mating; also how late can one sell broilers?

Forestville, N. Y.

Answer: If you are aiming to perfect a new breed of fowls you should not introduce foreign blood each year, or you will never reach what you are striving for. You will no doubt get a certain percentage of chickens like the hens, and by making careful selection each year and breeding from only the most

vigorous birds will no doubt accomplish what you desire, but it will take several years to do it. The terms pullet and cockerel matings, is used to designate the matings, where one pen has been mated to produce pullets and another to produce cockerels. There is a market for broilers at all times.

EDITOR AMERICAN POULTRY JOURNAL:

Dear Sir: Please answer the following in your "Question and Answer" department: First, Is it necessary to have pedigrees for chickens in order to have the right to call them thoroughbred or sell eggs from as being thoroughbred?

A. S.

Grove City, Minn.

Answer—No. Fowls are bred to conform to the requirements of the American Standard of Perfection, the only recognized authority on judging fowls. Price of this book is \$1.50. We are now booking orders for the new illustrated edition, which will be out about the first of September.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Please answer this question in your question and answer department next month. Why do my little brown leghorns begin to look droopy and die when they start to get wings?

Georgetown, S. C.

F. A. H.

Answer: They are probably overrun with lice, and in their effort to produce feathers and feed lice it overtaxes their strength and they die. Take a piece of lard about the size of an egg and melt it, to which add one teaspoonful of kerosene oil and mix thoroughly, and apply this on the head of the chick. Rub this in thoroughly so that it reaches the skin and apply it at least once a day for several days, and we believe that you will see a vast improvement in the looks of your little chicks in a very short time. You must also keep your coops sweet and clean at all times, either by whitewashing same or scalding them out with hot water frequently.

EDITOR AMERICAN POULTRY JOURNAL:

Dear Sir: I started with a pen of six Silver Wyandottes, five hens and one cockerel, bought of a noted breeder of Wyandottes, who claims his chickens have been line bred twenty years. Last year from this pen I raised twenty-nine pullets that were fit for breeding, the other having single combs. Last winter was obliged to kill my cock on account of rheumatism (he had had it more or less from the time we bought him), hence only had the cockerels raised last year to breed from. I bred two very fine vigorous looking cockerels to the old hens and pullets; eggs hatched exceedingly well, but have lost a great many of my chicks and none of them seem just right after about ten days old.

Chicks have had best of care and feed, clean, dry brooders, no lice, no bowel trouble, some of them moult around, refuse to eat much, die in a day or two. Others apparently well will be seized suddenly with something like epilepsy in people. They hollow, head draws backward, fall over on the side while the whole body quivers. After two or three of these seizures they die. I have some weighing about a pound that are now dying, refuse to eat much, become very poor and attacks of quivering of head and body, after which they seem dazed, die in a few days.

Will you please tell me in your next issue what the cause of this can be. Hens had best of care and feed last

winter, began laying last of December and laid well all winter.

Could it be caused by inbreeding by the man of whom we bought the fowls?

Will the chickens bred from this year be all right to breed from another year if we get new cocks to mate them with?

If I succeed in raising any of my chicks this year would they do to use as breeders another year?

Valparaiso, Ind.

M. L. R.

Answer: The symptoms noted lead us to conclude that your chicks are afflicted with intestinal worms. Examine in intestines of some of the chicks that die as described, and if any worms are found, give the chicks one-half to a teaspoonful of oil of turpentine to each chick. The following day give a half teaspoonful of castor oil or sweet oil.

We do not believe that inbreeding is the cause, but would not advise the use of this stock as breeders another season.

EDITOR AMERICAN POULTRY JOURNAL:

Dear Sir: I wish to give you for publication under "Questions and Answers" a receipt for the so-called chicken cholera, or, as I believe, is simply indigestion, caused by overfeeding, which I believe is the true cause 99 cases out of 100:

Poelophyn 1 part.

Leplandrun 7 parts.

Black antimony 8 parts.

Dose, 1 teaspoonful to 40 hens, fed in a mash, mixing in the compound while dry, then add the water and stir thoroughly before feeding. Another way to mix this compound is: 1 heaping teaspoonful mixed with enough wheat flour to make 40 pills, when thoroughly mixed add water enough to make a stiff dough and roll and cut into 40 pills, and in severe cases give one pill in the morning and one at night until the bird is better. This we have found a success. The man that formulated this recipe told me that the cause of the disease was the enlargement of the gall and lying across the large intestine running from the crop to the gizzard produced inflammation and caused the death of the fowl, and anything that would reduce gall would save the patient. We have tried it for four years and with us it has worked wonders. I do not say but there may be just as good remedies as this, but this we have tried and found that it gave entire satisfaction to us and our neighbor poultry raisers.

Yours respectfully,

H. P. WHEELER.

Jonesville, Mich.

Young chicks should not be allowed to roost too early. Let them seek the roost of their own accord. Care should be taken, however, to prevent crowding in pens or brood coops. They will persist in piling on top of each other and the under ones suffer accordingly. The debilitating perspiration resulting in cases of this kind seems to take the life right out of them and weakens them to such an extent as to stunt them beyond the point of recovery.

There are some of the most beautiful and seemingly conclusive theories advanced in the poultry business that were ever sprung upon the untutored in any line of endeavor. Don't accept as truth all the advice offered.

Watch the breeding fowls carefully; grease with carbolated vaseline, all heads that are showing signs of the depilumy mite. Anoint all scaly legs and those showing signs of scaldiness.

White Wyandottes and Pekin Ducks

Greatest competition White Wyandottes and Pekin Ducks, winners in the greatest competition in the world: World's Fair champions; 1, 3, 6 and 7 on young Pekin hens; 2, 3 and 7 young drakes, 3, 5 old drakes and 4 old hen. Won 6th and special on cock in White Wyandottes, and I have the best in the world in my breeding pens for 1905. 1st cock, 3d cockerel, 1, 2 and 4 pullets and eight more pullets, sisters to the prize winners and a brother to the 3d prize cockerel.

Illinois State Fair, 1st, 2d and 3d on Pekin Ducks. No White Wyandottes were shown. St. Louis Fanciers' Association, Dec., 1903, won 1st breeding pen, 1st pullet and 3d cock in White Wyandottes and special for best pullet. Chicago National Fanciers' and Breeders' Association, 1905, won 1, 4 pullets, 1, 5 hen, 1, 3d ckl., 2, 5 cock and three specials for best shape, and silver cup for the whitest bird in the show room on White Wyandottes. Pekin Ducks 1, 2 cock, 1, 2 hen, 1, 2 cockerel, 1, 2 pullet. White Wyandotte eggs \$3 for 15, \$5 for 30. Pekin Duck eggs \$2 for 11, \$3.50 for 22, \$7 for 50.

THEO. AMBROSIOUS

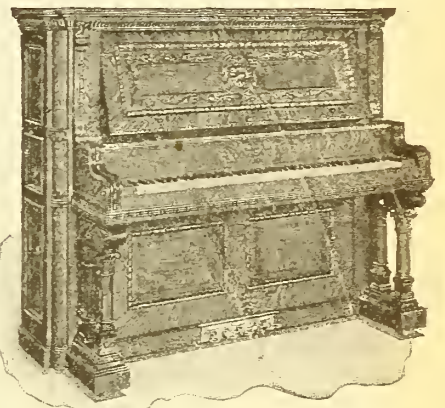

Collinsville, Illinois

WING PIANOS

Are Sold Direct From the Factory, and in No Other Way

You Save from \$75 to \$200

When you buy a Wing Piano, you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many still do—at retail—you pay the retail dealer's store rent and other expenses. You pay his profit and the commission or salary of the agents or salesmen he employs—all these on top of what the dealer himself has to pay to the manufacturer. The retail profit on a piano is from \$75 to \$200. Isn't this worth saving?

SENT ON TRIAL

Anywhere We Pay Freight No Money in Advance

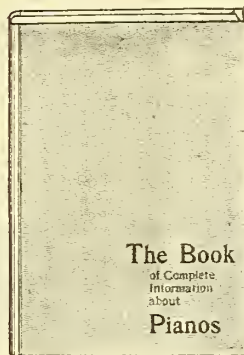

We will place a Wing Piano in any home in the United States on trial, without asking for any advance payment or deposit. We pay the freight and all other charges in advance. There is nothing to be paid either before the piano is sent or when it is received. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing, and are under no more obligation to keep the piano than if you were examining it at our factory. There can be absolutely no risk or expense to you.

Do not imagine that it is impossible for us to do as we say. Our system is so perfect that we can without any trouble deliver a piano in the smallest town in any part of the United States just as easily as we can in New York City, and with absolutely no trouble or annoyance to you, and without anything being paid in advance or on arrival either for freight or any other expense. We take old pianos and organs in exchange. A guarantee for 12 years against any defect in tone, action, workmanship or material is given with every Wing Piano.

Small, Easy Monthly Payments

In 37 years over 40,000 Wing Pianos have been manufactured and sold. They are recommended by seven governors of States, by musical colleges and schools, by prominent orchestra leaders, music teachers and musicians. Thousands of these pianos are in your own State; some of them undoubtedly in your very neighborhood. Our catalogue contains names and addresses.

Mandolin, Guitar, Harp, Zither, Banjo—The tones of any or all of these instruments may be reproduced perfectly by an ordinary player on the piano by means of our Instrumental Attachment. This improvement is patented by us and cannot be had in any other piano. WING ORGANS are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

You Need This Book

If You Intend to Buy a Piano—No Matter What Make

A book—not a catalogue—that gives you all the information possessed by experts. It tells about the different materials used in the different parts of a piano; the way the different parts are put together, what causes pianos to get out of order and in fact is a complete encyclopedia. It makes the selection of a piano easy. If read carefully, it will make you a judge of tone, action, workmanship and finish. It tells you how to test a piano and how to tell good from bad. It is absolutely the only book of its kind ever published. It contains 158 large pages and hundreds of illustrations, all devoted to piano construction. Its name is "The Book of Complete Information about Pianos." We send it free to anyone wishing to buy a piano. All you have to do is to send us your name and address.

Send a Postal To-day while you think of it, just giving your name and address or send us the attached coupon and the valuable book of information, also full particulars about the WING PIANO, with prices, terms of payment, etc., will be sent to you promptly by mail.

IT KILLS 'EM

SCHILD'S LIGHTNING LICE KILLING MACHINE

The lice—because it puts the powder on the fowl's body where the lice are. The quickest, handiest, safest way to destroy lice on poultry is to put them in Schild's

LIGHTNING LICE KILLING MACHINE

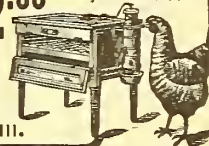

Simply sift lice powder into machine, put in your fowls, turn crank a few times and it's done. The application of some lice killers is worse than the pest—but this is easy, quick, safe and sure. Cleans 100 fowls in 60 minutes. Use our Lice Murder for clearing out mites in poultry houses—easy to apply—does the work. Catalogue free. Write for it today.

"MONEY in POULTRY."

Our new 84-page book for 1905 tells how to make it; also how to breed, feed, grow and market your poultry for best results. This book probably gives more reliable information about the poultry business, obtained from actual experience on the largest farm in America devoted exclusively to the rearing of pure-bred poultry, than any other book published. Describes and illustrates 25 varieties of our pure-bred fowls. Quotes extremely low prices on stock, eggs, incubators and brooders. Mailed for 4c in stamps.

FRANK FOY, Box 50, DES MOINES, IOWA.

\$300

If you are looking for a brooder that is a success from the start, that will enable you to have enough of them to properly care for your chicks, and will not cramp your purse, that is easy to clean, and one that applies the heat direct to the backs of the chicks. Send for free catalogue to the

PERFECT BROODER SHOP

CELORON, NEW YORK

System in Poultry Practice

BY JAMES SHACKLETON.

30 Chapters, 147 Pages, One Dollar, Postpaid.

May 1, 1905. Sales of this book since Sep. 1, 1904—eight months—are larger than for preceding 15 months. It is meant to appeal to common sense and evidently succeeds, for increase is chiefly in places where it has gone before. California always took more than any other state, and now takes more than any other three. Canada has many and now takes more than any state but California. Even Australia takes many. This book has been sold in every state of the Union, except two southern states, and Alaska. In Canada, Newfoundland, P. E. Island, New Brunswick, Nova Scotia, Quebec, Ontario, Manitoba, Assiniboia, Alberta, British Columbia and Vancouver Island. In Cuba, Hawaii, Philippines. In England, Belgium, Germany, Australia, New Zealand and China. It is meant to be of equal value in every climate, for whatever purpose fowls are kept, and evidently is so regarded. Sales are increasing rapidly everywhere. Enthusiastic testimonials are plentiful.

The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON,

Box A 12, Milburn, New Jersey

HOUDANS!

For more than thirty-one years Rigg's strain of Houdans has been the acknowledged standard of Houdan excellence by all Houdan breeders and exhibitors at ALL the leading shows of New York, Boston, etc., have drawn largely upon this strain. The record made by the Rigg strain during all these years has never been approached by any breeder.

Mr. Thos. F. Rigg, Iowa Falls, Iowa.

Driftwood Farm, Girdletree, Md., Dec. 17, 1904.

Dear Sir:—In 1898 I obtained in Colorado three Houdans that were purchased of you. I took them to Brazil, where they were practically unbeaten by the best English strains, to say nothing of breeding a lot of youngsters that hustled their Minorcas in egg production.

WALDO KENNARD.

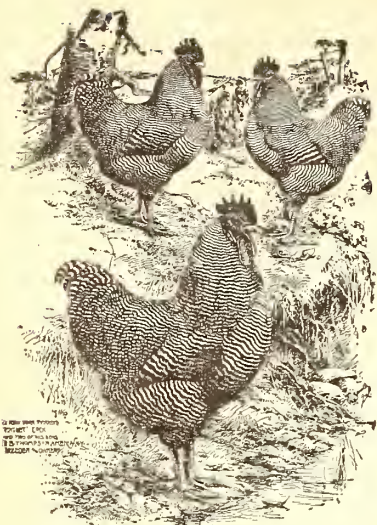

This is the kind YOU want the large, vigorous, egg-producing, show winning kind. More than 31 years of careful, systematic, line-breeding has given us this magnificent strain of Houdans.

EGGS FOR HATCHING THAT WILL PRODUCE SUCH STOCK

We have no special pens in reserve for ourselves and other pens for our customers. The same pens that supply us with our many winners and magnificent breeding birds, supply our customers with eggs. Price of eggs \$3 per setting, two settings \$5.

THOS. F. RIGG

IOWA FALLS, IOWA

A "Ringlet" 1st Prize New York Cock and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation, Madison Square Garden, New York, January, 1903.

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

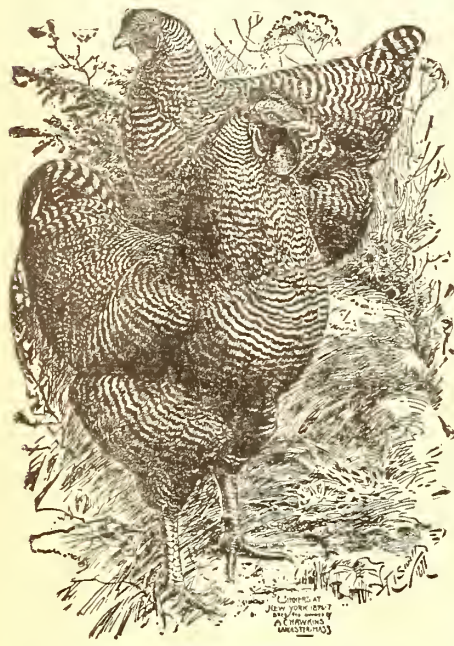

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 87 prizes. 36 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36 page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

ECCS FROM PRIZE MATINGS.	
1 Sitting, \$5.	3 Sittings, \$10.
2 Sittings, \$8.	5 Sittings, \$15.
Per 100, \$20.00.	

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others. My matings this season are the best I ever owned. * * * * *

At the Great National Show, WASHINGTON, D.C., in hot competition with over 300 birds of these varieties, the best that could be found regardless of price, I won 45 Regular and Special Prizes on 39 Entries, including First Prize on Breeding-Pen in each variety, Special for Best Display in the American Class, Special for Best Exhibit of Plymouth Rocks, Sweepstakes Special for Best Cockerel in the show (Bantams excluded), and this on my First Prize Barred P. Rock Cockerel. My winning White Wyandotte cock was pronounced by the judges to be the best they had ever seen. I won twice as many first prizes as all other exhibitors of these varieties. My BUFF ROCKS, at Boston, 1899, in hot competition, won more first and special prizes than all others. My customers are winning all over the country. If you want the BEST, write me. Hundreds of Choice Exhibition and Breeding Birds at Honest Prices. Catalogue of America's finest Plymouth Rocks and Wyandottes free.

AMERICAN POULTRY JOURNAL.

IT IS A FACT

that poultry pays a larger profit for the money invested than any other business; that anybody may make a success of it without long training or previous experience; that the Reliable Incubators and Brooders will give the best results in all cases. Our 20th Century Poultry Book tells just why, and a hundred other things you should know. We mail the book for 10 cents. Write to-day. We have 115 yards of thoroughbred poultry.

RELIABLE INCUBATOR & BROODER CO., Box A-1 Quincy, Ill.

Incubators on 30 Days Trial

The Only Kind that Never Fail. The World's Best Our Standard Hot Air Incubators require less attention to operate, they being of larger and better broods of strong healthy chicks, and they will last five times longer than any hot water incubator in the market. Large, handsome, fully illustrated catalogue and Poultry Guide with all kinds of building plans, etc., 10c. Send for a copy at once and learn something, it's worth a dollar. Address THE STANDARD F. C. INCUBATOR CO., Dept. C, Rochester, N. Y., U. S. A.

To Make Poultry Pay.

Diseases and drowning chickens must be prevented. This can be accomplished by using Sanitary Stone Ware Water Fountains. They prevent poultry diseases and chicks cannot get into them to drown. Poultry judges say they are the best poultry life preservers ever invented. Send for our special low prices. They will surprise you.

The Reliable Poultry Supply Mfg. Co. Rochester, N. Y.

Ha! Ha! Poultrymen!

Now you can rid your fowls of lice and mites without handling the birds, with our Reliable Sure Shot Nest Eggs. They save labor, time, and unnecessary expense. Don't monkey any longer using liquids or insect powders. They are a thing of the past. Order a box of our nest eggs at once, only 55c per box delivered at your door. Your money back if not satisfied. MODEL INCUBATORS and BROODERS

Everything for the Poultryman

Manufactured by Chas. A. Cyphers

...PHILLIP'S FLY CHASER...

By the use of Fly Chaser during the hot weather at the cost of one-half cent per day, each horse will do $\frac{1}{2}$ more work; cows will give $\frac{1}{2}$ more milk on $\frac{1}{2}$ the amount of feed required without it. Phillip's Death to Insects kills lice and mites on poultry, also any insect. Write for free circular and prices.

COLUMBIA SCHOOL OF POULTRY CULTURE,

Box 722,

WATERVILLE, N. Y.

We Can Teach You How to RAISE POULTRY PROFITABLY

If your poultry isn't paying as it should, you are making costly mistakes. Our course of Instruction will quickly teach you how to make any yard (large or small) pay from 25 per cent to 50 per cent profit. Your knowledge and ours combined will make you successful. The individual home lessons, delivered regularly at your very door, are prepared by practical poultrymen who have by actual experience mastered the problems which worry nine-tenths of all poultry raisers. You get no theoretic instruction. After a little study you can discover your errors and overcome them. The directions are easy to understand and follow, and big paying results are sure. If you want to qualify yourself as manager of a poultry yard and accept one of the

MANY LUCRATIVE POSITIONS

we have on our records, our Course of Instruction will soon make it possible. Poultry Culture is not drudgery when rightly conducted. It is a healthful, profitable, enjoyable vocation for man or woman. Write for interesting free literature at once. Ask for circular showing some of the good paying positions we have open for competent men.

BUFF ORPINGTONS

World's Fair Winners

at the largest poultry show ever held, with the strongest class of Buffs ever brought together, we won seven out of a possible ten firsts. This duplicates our Chicago record, where for four years we have won more firsts than all competitors combined. Circular free.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet. BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials. BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials. BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's. Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

WILLIAM ELLERY BRIGHT,
WALTHAM, MASS.

Good Trades in Good Breeders

During July and August we shall offer bargains in A1 breeding and show stock. Among the birds to be sold will be some of our very best breeders and show birds. This list includes:

First Barred Plymouth Rock Cock at the St. Louis Exposition

" " " " **Pen, Male,** " "
" " " " **Ckl., New York Show, 1903**

Besides, we have some exceptional yearling males from our best sires that are fine specimens, but were not quite mature for the winter shows; also many of the fine females that composed our best pens. All these at very reasonable rates.

IN S. C. BROWN LEGHORNS

we offer some very rich colored males and some strong breeding females for cockerel breeding.

ORIGIN AND HISTORY OF THE BREEDS

The Source of the Light and Dark Brahma—Proven Facts Which Have Been in Dispute for Many Years—History of the Light Brahma Since Its Introduction Into America—The Dark Brahma Originated in this Country and Perfected in England—Breed Characteristics of the Most Popular of the Asiatics and its Classmate.

Paper No. 1—Light and Dark Brahmas.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal

While in England the origin of the Light Brahma is and has been for years a disputed question, here in America the evidence is conclusive to the student of history that the Chamberlain introduction forms the foundation of the present Light Brahma. Mr. Harrison Weir, the eminent English writer and artist, holds to the theory that the Burnham Gray Shanghais, nine head of which were presented to Queen Victoria by Mr. Burnham in 1852, were of the original Brahma stock. Of this foundation stock Mr. Burnham wrote in 1855:

"An ambitious sea captain arrived in New York from Shanghai, bringing with him about 100 head of China fowls of all grades and colors. Of these I selected a few gray birds that were very large. I tried them with other gray stock I had." [It is said that Mr. Burnham crossed one of these males upon a Buff Cochin hen, thus making a cross between two Chinese breeds.—EDITOR.] "I soon found a lot of birds to dispose of, to which I gave what I deemed the only true and appropriate title, to wit, the 'Gray Shanghais.'"

These fowls had single combs, and while possessing Light Brahma color markings, to a considerable degree were very unlike the stock then being bred by Mr. N. H. Chamberlain, of Hartford, Conn. American fanciers have never taken Mr. Burnham's statements seriously. Mr. Charles Knox, then of Hartford, Conn., gives to history this unqualified statement:

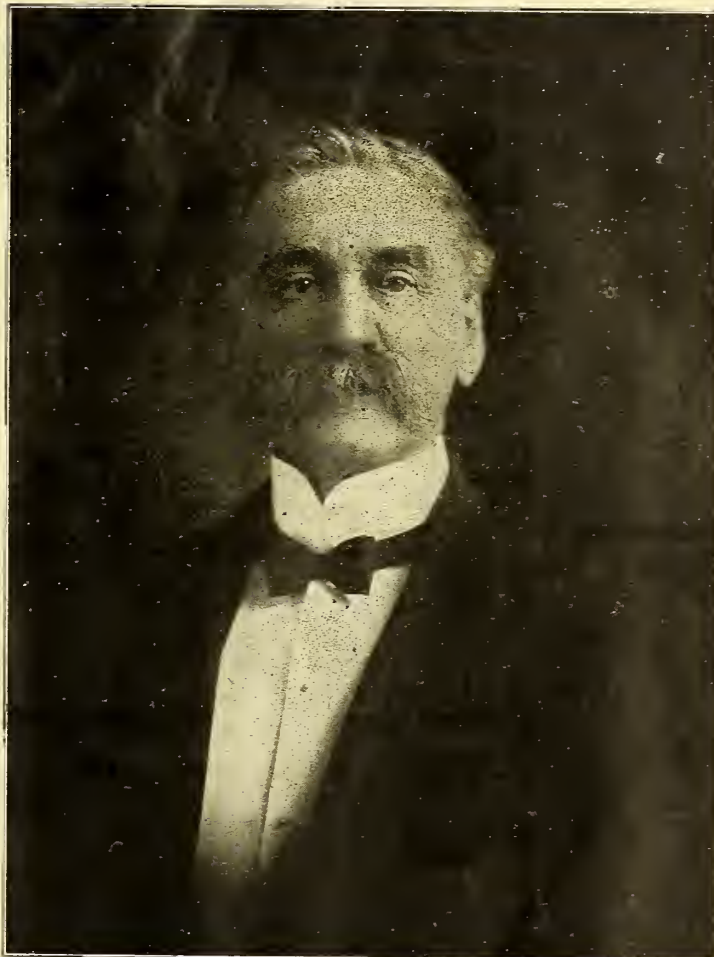

"Early in the fall of 1847, while I was clerk on the pro-

peller Sachem, of the Hartford and New York line, Captain George Deming, master, on invitation of a friend I went on board a full-rigged East Indiaman, lying near Old Slip, East river, to look at a remarkable collection of poultry we had heard about. I never knew or thought to ask what port the vessel sailed from, nor her name, for that class all bore the same name in common conversation—'East-Indiaman.' Among the poultry I saw two pairs, one gray, the other red, which attracted a great deal of attention on account of their large size. After some trouble, I learned that they were to be exhibited at Franklin market. The next trip, after reporting to Mr. Chamberlain (who had some time previous requested me to keep a lookout for something of this description, and wished to get some new breed, at his request, on my return to New York I went and bought the gray pair and took them to him at Hartford."

Mr. Knox was positive in his statement that these gray fowls very closely resembled the Light Brahma of to-day.

Fortunately there are those still living who were very closely and prominently identified with the early history of the Light Brahma—I. K. Felch and Philander Williams among the number. These grand old men and devoted fanciers are to-day proud of their production of more than half a century ago, and are still devoted to their best loved breed of fowls. These men have the esteem and the confidence of all fanciers the world over. We asked Mr. Felch to give us the important facts, as he knows them. He says:

"Notwithstanding the many efforts to divert the credit from those entitled to it, and to cloud the origin of the Light Brahma by people, many of whom have been born since the breed was christened, the facts and record remain that the fowls securing the name of Brahma Pootras, and finally discarding all forced descriptive adjectives, and finally becoming to be known as the Brahma fowl, have absorbed all others that were previously known as the Gray Chittagongs. These Chittagongs lost their identity when the Brahmas secured recognition, also the prestige they had previously enjoyed, and became the

I. K. FELCH, "the Father of Poultrydom." 71 years old.

female blood used for crosses with the Brahma males. Their progeny were bred back to the peacomb males, found on board the India ship in New York in 1847, which were purchased for one Mr. Chamberlain, of hospital fame, in Hart-

ford, Conn. Mr. Chamberlain bred them for two years or more, to sell to Mr. Virgil Cornish, who was the first exhibitor of them at the Boston Fitchburg depot show in 1850. These were christened *Brahma Poortas*, or *Short Leg Chittagongs*. The records of that show reveal the facts that these birds were different in many respects from the *Gray Chittagongs*, a Chinese fowl that was then the favorite—so much so that the jealousy of the breeder of them forced the descriptive sentence I have named above. The fowls christened as *Brahmas* had a pea comb, were clearer in color, less angular in their conformation, and admitted to be different in all respects, yet their importers were forced, for the time being, to allow them to be known as *Short Leg Chittagongs*. But they very soon shuffled off this objectionable qualification, to be known as the *Brahmas*, and to see the breeders who had so strongly opposed them showing their *Chittagongs* as single comb *Brahmas*, the last time, I believe, at the second show in Chicago in 1866. To this fact, I fear, has caused many writers to attribute the *Brahma* origin to the haphazard matings of the Chinese birds, they becoming popular at the time of which I write. By the introduction of the *Brahma* all these others were put aside. This dropped the *Chittagongs* into the condition of being used as blood food to maintain the vigor of these new aspirants, which was resorted to by many breeders. The breed was known as the *Brahma* fowl up to 1866, when the *Dark Brahma* showed up in New York. Then the adjective 'Light' was prefixed to designate the difference of the two varieties. The origin of this new comer, the *Dark Brahma*, was the result of a brood of chickens that were bred from a *Gray Chittagong* male with the *Marsh Shanghai*, these latter known as *Gray Shanghais* and subsequently as *Gray Cochins*. This brood was sent to one Bailey, of London, England, by Geo. P. Burroughs, of Melrose, Mass., in 1854. The English breeder, by the aid of the pea comb *Brahmas*, perfected them so that in 1866 the improved product was sent to us to be shown here in America that year for the first time as prize winners. Behind the Chamberlain purchase of the *Light Brahma* and the record of the *Dark Brahma* here given, no living breeder can show one fact of record. The early breeders, men of my age, 71 years, know this to be a statement of fact as to the Chamberlain strain. But in 1866, at the same exhibit where the *Dark Brahma* appeared, was shown a *Light Brahma* called 'Autocrat.' This male, which won prize, was purchased in the Fulton market by Mr. Estes, who edited the first *Standard of Excellence*. This bird in question was said to have been imported by the merchant of whom he was bought. The bird was presented to Philander Williams, who bred him to the best females he could procure, and through his progeny became the foundation of the famous *Autocrat* strain. These two strains are the only original and authentic two strains—the Chamberlain (now Felch) and the *Autocrat* strain. But since the influence of the American Poultry Association forcing all strains to standard color and type, the amalgamators of the two strains have been merged into different families and the influence upon their breeding has been varied. The early breeders who exerted influence upon the breed are: Chamberlain, the original buyer; Virgil Cornish, the first exhibitor; Childs, of Rhode Island; Williams, Corney and Felch, of Massachusetts. Since that time these fowls have found their way into every state in the Union and every country of the old world."

The fact is undisputable that the Chamberlain stock was the original *Light Brahma*.

HISTORY OF THE LIGHT BRAHMA.

Since its introduction in America the *Light Brahma* has been a popular fowl. Many breeds and varieties have come and gone, but the old *Light Brahma* remains, the love and pride of a host of fanciers and the mainstay of a large number of market poultrymen.

As an exhibition fowl, the *Light Brahma* occupies a prominent place. This large, massive bird, beautiful in its color

markings of pure white and black, is very attractive in the show pen. In New England its popularity is the greatest, both as a fanciers' and utility fowl. It has been truly said that there is a time in the life of every fancier when he has a desire to breed the *Light Brahma*. There is a pleasing personality about the *Light Brahma*—stately and majestic and easy repose.

As an egg producer the breed holds an enviable record. This fowl produces a majority of its eggs in the cold months, when the product commands the highest market price. Many fail in egg production with these fowls because of a lack of knowledge as to how to properly feed. An overfed *Brahma* hen is an idler and is unproductive. As soft roasters no other breed or variety can equal the *Brahma*, nor are in such demand in the best markets of the country.

It can be stated as a fact that the latter day Cochizing of the *Light Brahma* by many breeders has impaired the laying power of the breed, where so bred. Mr. Felch and Mr. Williams and a number of other friends of the breed have strongly opposed this action, and have retained the *Brahma* in its true form. This Cochizing of the breed has, too, affected it as an exhibition bird. The west will have none of the Cochized stock.

BREED CHARACTERISTICS.

Standard weights of *Light Brahmas*. Cock, twelve pounds; cockerel, ten pounds; hen, nine and one-half pounds; pullet, eight pounds.

Disqualifying weights: Cock not weighing nine pounds; hen not weighing seven and one-half pounds; cockerel not weighing seven and one-half pounds; pullet not weighing six pounds.

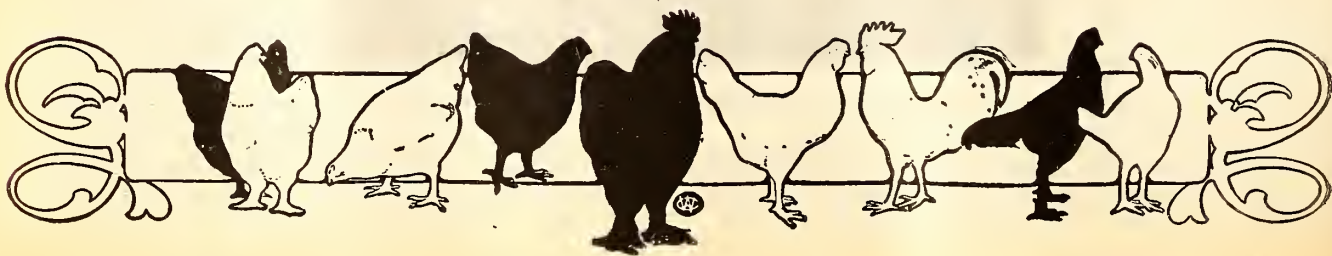

In shape the head should be moderate in size. The pea comb should be small, setting firmly and evenly on the head, lower and narrower at front and rear than in the center. It has the appearance of three small single combs joined together at base and rear, the longest and highest in the middle, each evenly serrated. The serrations of the front and rear are smaller than those in the middle. The breast should be full and prominent; the back short and broad. Neck well arched with hackle abundant in the male, flowing well over the shoulders. Body deep and well rounded. This is very important. Wings small and carried rather high. Tail medium in size; in male carried well upright. In female tail carried high enough to continue the concave sweep of the back. The thighs must be stout and covered with soft feathers. Toes well feathered on outside. In color the *Light Brahma* is pure white and black in body, breast and thighs. Under the wings it may be white, bluish-white or slate. Wings, neck and tail are positive black and white. Hackle web white with a black stripe down each feather, half or more its length, tapering to a point near the extremity. The wing bows are white, except front where some black is allowed. Primaries, black or nearly so, with white edging on lower edge of lower web. In the secondaries the lower portion of the lower web is white, the rest being black. Tail black. Sickie feathers glossy greenish black.

Standard weights of *Dark Brahmas*: Cock, eleven pounds; hen, eight and one-half pounds; cockerel, nine pounds; pullet, seven pounds.

Disqualifying weights: Cock not weighing nine pounds; hen not weighing seven pounds; cockerel not weighing seven and one-half pounds; pullet not weighing five and one-half pounds.

The *Dark Brahma* should be identical in shape with the *Light Brahma*. In color the cock is silvery white, striped with black in upper part of body, including neck-hackle, back and saddle. Breast, pure black. Wing bows, silvery white. Primaries, black, except narrow edging of white on lower edge of lower web. Secondaries, black, except lower half of lower web, which is white till near the end of feather. Here the white terminates abruptly, thus leaving the end of the feather black. Tail, glossy greenish black.

In color the female is a pure steel gray.

IDEAL LIGHT BRAHMAS.

Monthly Prize Article Department

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to Wm. E. Crevoiserat, Freeport, L. I., N. Y., and second prize to L. Watson, M. D., Chesaning, Mich.

A FARMER'S CHANCE.

The price of eggs is going up. Why? Let any person who is interested in poultry make a trip to the farmers' poultry yards and he will soon find out the reason.

The most of the yards will be found to be small and with no grass or other green food growing in them. In many the only shade to be found is that of a dilapidated coop that is cleaned regularly every spring and fall. No wonder the hens do not lay during the hot summer months.

Ask the farmer how many eggs his flock of twenty or thirty hens lay in one day. Two and sometimes three eggs a day, maybe less. Think of the expense of keeping these birds during the summer months without getting any returns. And then the molting season to follow. Dead loss for three months more.

Now is the chance for the enterprising farmer to save money. Let him sell off all his old birds and with the money realized from them let him improve his young stock. The extra time he would have spent on the old birds he can now spend on the young stock and get much better results. The coops can be kept cleaner, the water clear and cool, and more time given to their feeding.

With care and attention he can raise a fine lot of young pullets that will lay well this coming winter if good quarters and nourishing food are provided for them. The quarters for the young stock should be provided as soon as he has sold his old birds. Tear down the old shell and erect a warm, well ventilated house with plenty of room. A couple of windows in the south side and a scratching shed will be a big step toward a full egg basket.

But next summer the yard will still be bare and without shade. Let the farmer hunt around in the hedges and find where the raspberry bushes grow. Mark those that have the largest fruit and transplant them this fall, making three or four rows across the yard, and he will have solved the problem of shade.

Between the rows he should spade up the ground and sow it with some grain, taking care that the fowls are kept off until yarded next spring. This will insure plenty of green food for the fowls for the next summer.

Imagine the change. During last winter the fowls did not lay because of the cold and lack of exercising place. When the spring came each fowl might have laid fifty eggs and then the heat of summer stopped them as effectively as did the cold of winter. Instead of keeping these fowls over the molt and, perhaps, all winter without getting any returns, he decides to sell them after their spring spurt, and devote his time to developing a new lot of vigorous, hustling birds, which will lay steadily the year round, the molting period excepted, and to improve his yards and coop to correspond to his stock.

His fine looking birds and the large number of eggs they lay become the envy of the neighborhood and he becomes highly satisfied with poultry. This chance, open to all, is sure to bring good results to those who take advantage of it.

Freeport, L. I., N. Y.

WM. E. CREVOISERAT.

CARE OF GROWING CHICKS DURING HOT WEATHER.

In choosing the above subject for this article I have been astonished, when visiting poultry fanciers, to see the want of careful, painstaking attention (which is so necessary for success) manifest on every hand. Water dishes empty, coops filthy, yards bare and if, after a rain, a mud puddle, etc. I hope that I will be able to put fresh life and zeal into some of these fellows, enough to last until the weather cools off in the fall, and this will help the chicks along some.

By the first of this month (July) the chicks should be far enough ahead to distinguish the sexes; if so, separate them,

placing pullets in one yard or range, and cockerels in another. Give them a thorough dusting with a good louse powder before putting in new quarters, which should have been sprayed with liquid lice killer of some kind, and if the coops have been whitewashed inside and out, so much the better. Any chicks showing any standard disqualifications should be sent to a separate pen, to be fattened and prepared for market. The largest and best developed of both sexes should also be placed in separate coops, where they can receive special care and attention to fit them for the coming fall shows, as size and weight should always be up to standard requirements, these should, like the rest, have free range, if possible, as the exercise which the chicks get in chasing after bugs, grasshoppers, etc., greatly helps growth and development, and as long as chicks or fowls are busy working for their living they will do well. Mash may be fed once a day, made of corn and oats, but do not make it sloppy; feed dry and crumbly. Hulled oats or wheat once a day; green bone or beef scraps once a week if running out, twice a week if yarded. Milk in any form may be given as drink, or used to mix the mash. Green food will be obtained in its best form if the chicks have free range, and if not lawn clippings or clover cut with a scythe may be given twice a day, what they will eat up clean. The weeds pulled from the garden may be given them and I find this a most effective way of getting rid of them. Water vessels must be placed in shady place, and filled at least six times a day in

BARRED PLYMOUTH ROCK.
Bred and Owned by R. E. Haeger & Co., Algonquin, Ill.

hot weather. They must also be scalded and disinfected at least once a week. My method of disinfecting is as follows: Put about 5 grains (in a two-quart drinking vessel) potassium permanganate; a larger quantity should be used to a larger vessel; fill vessel with boiling water; let stand for 15 minutes, throw out and wash the vessel out with cold water, and it is sweet and clean and ready for use. Let me impress upon you to not neglect the care of drinking vessels during hot weather. Now, as to location of range. An orchard is the best place. Among berry or currant bushes the next, and any meadow or grass near where shade may be had or made for the chicks will do, but they must have shade from the hot sun, and if you have no trees to afford it, make canvas shelters, or boards leaned against coops. Anything where they can get a cooling-off spot. Grit must be provided in the shape of fine mashed gravel, from the head of some running stream, and crushed oyster shells. Charcoal have always within reach. If you have yard chicks change location once a week, or spade up yard. Watch the birds closely and as soon as any disqualification is shown cull it out, no matter if it is the biggest in the bunch. This requires nerve, but it is the only way to succeed and bring to the highest point of perfection your flock, and place you in the front row of seats with the exhibitors. To insure best results with chicks, keep them busy, free from lice and comfortable. Provide shade, plenty of cool water and good, wholesome food; grit, charcoal and beef, or cut bone, and thoroughly and regularly clean coops, and they will develop into good specimens and perhaps prize winners, if the breeding is right.

Chesaning, Mich.

EVOLUTION OF ARTIFICIAL INCUBATION

Wonderful Progress Made in the Methods of Artificial Hatching of Chicks—Egypt the Cradle of Artificial Incubation.

Written by Rev. C. E. Petersen, Franklin, Me.

The wonderful progress in inventive science is best seen by going back to the primitive methods of our forefathers, and yet in very many of these rude contrivances we find the germ of what is to-day a fully developed piece of intricate machinery, that in many instances almost seems endowed with reason.

It is at least interesting to follow in some detail the evolution of our modern incubator by going back to the origin of this useful invention that no single man can lay any claim to, but which is a combination of many men's minds, and though the modern incubator is far from being perfect in many of its details, it is so great an improvement over the primitive methods that we have put it within the reach of every poultry man that cares to use it in his hatching operations, and very few there are that do not take advantage of it.

That Egypt is the cradle of artificial incubation cannot be successfully contradicted, anyhow we cannot go back farther for our information, and therefore will give an account of how an Egyptian "Mamal" or hatching oven is constructed and operated to-day, as it was in the time of the Pharaohs, thousands of years ago.

The hatching oven or "mamal" is built with brick, about nine feet high, with a gallery in the middle, three feet wide and eight feet high; on each side of which is a double row of rooms, each three feet wide and four or five feet broad, and twelve or fifteen feet long, and each capable of containing four or five thousand eggs, deposited in such a manner as not to touch one another, upon a mat or a bed of flax.

At the outside of one angle of the building there is a fireplace, from which the heat is conveyed to both stories by means of flues, during three or four hours daily, at stated intervals.

Ventilators are also used, lest the heat should be too great—the standard temperature being that of the warm baths of the country.

After ten days, ascertained by holding an egg or more to the eye, according to the weather, the fires are discontinued, the oven being then hot enough to complete the process.

About the middle of January the ovens are inspected and repaired; and, as they are public, and as each has a circuit of fifteen or twenty villages, notice is given to the inhabitants so as they may come and bring their eggs.

As soon as a suitable quantity of eggs is collected together they are put into the rooms that are to serve for the first brood; for the whole of the ovens are never employed at once on the same brood, but only one-half of those which the building contains.

The eggs are ranged three deep in the lower rooms of each oven on a bed of chopped straw and dust, which mixture Aristotle probably mistook for dung, and several centuries later misled the great French investigator Reaumur in his experiments.

As the fuel burns away it is renewed three times a day and as many at night, with the same precaution each time to open up for a few moments the hole in the roof, both for the purpose of ventilation and for keeping the eggs from the first impression of heat.

The fire is thus continued during ten days; a long experience, a skilful hand, and the application of eggs against the eyebrows are the only thermometers used in Egypt for regulating the temperature.

During that space of time the eggs are often turned and examined, and those that are clear, addled or with dead germs in them are thrown out.

On the eleventh day the second brood is forwarded by placing fresh eggs in the interior cells of the six ovens left empty at the first brood, and the furrows of their upper cells are filled with lighted fuel.

As soon as the fires are lighted in these ovens they are put out in the others, so that the eggs of the latter are no longer heated, but by the fire lately made in the former, and only receive heat by the side windows in the upper chambers of the ovens, which remain constantly open.

The second brood thus got forward, they take from the lower rooms of the ovens first used, one-half of the eggs, to lay them out on the floor of the upper rooms.

This change is made because these eggs require the greater care the nearer they draw to the time when chickens are to issue from them; and by being placed on the floors may be inspected, turned and taken up with greater ease.

When the twentieth day of incubation is arrived, some chicks are already seen to break their shell, the greater part issue on the morrow, with or without help; but few wait for the twenty-second day.

The strongest chickens are taken to the room allotted to them, and from there are distributed to those who furnished the eggs, and who obtain two chickens for every three eggs; the weakest are kept a few days longer.

We have chosen this description of the Egyptian method from a number of treatises on the subject, because of its clear and concise statements.

On the revival of arts in Europe the Egyptian method of artificial incubation spread successively to Malta, to Sicily, to Italy and then to France and England.

Mains tells us in his Treatise that one of the dukes of Florence sent to Egypt for a Bermian to superintend a hatching oven for him; and Alphonsus II of Naples set up one at his country residence.

Charles VIII of France in 1496 had one built at Amboise, and Francis I another at Montrieux.

There is a curious entry extant of the expenses of the oven at Amboise, which runs thus:

"Paid to Messer Nicolas Vigans, an Italian, for fourteen days by him taken and employed for working an oven at the said place of Amboise, for hatching and rearing chickens without hens, which he has done for the King's pleasure, during this time, at a rate of four sols two deniers per day, and has been paid, as appears by his receipt, the sum of fifty-eight sols four deniers (about five shillings)."

"To the said, the number of 1,300 eggs by him bought at the aforesaid time in order to have them hatched and have chickens for the said, at the rate of four sols two deniers per hundred."

In the year 1750 a work was published in Paris and in the same year translated into English, giving in detail what was comprehended in the title of the book: THE ART of Hatching and Bringing up Domestic Fowls of all Kinds, At any Time of the Year. Either by means of the heat of Hot-Beds or that of Common Fire.

By M. De Reaumur,

Of the Royal Academy of Sciences at Paris.

This book, containing 471 pages, gives in detail the author's experiments in artificial hatching; misled by some inaccuracy in a passage in Aristotle, who says the Egyptians cover eggs with dung in order to hatch chickens—a circumstance quite impossible. M. Reaumur tried various experiments in hatching artificially by means of heat generated from fermenting dung, and, after numerous disappointments, at length succeeded in hatching about two-thirds of the eggs which he tried.

He first put eggs into an earthen pot and then placed them in a layer of dung, but after a few days found that the eggs had been partly boiled.

He next made some shallow boxes, somewhat in the form of a hot-bed, which he sunk into the dung, and in them placed his eggs. Two of them, at the end of two days, showed the beginning of a germ, which gave him great hopes of ultimate success.

But, after a few days, the stench coming from these eggs gave him notice of one more failure and disappointment.

These accidents were then almost continuous, and the chicks died in the shells long before the day they should have hatched.

He then began to regulate the heat, and though the heat was kept at the requisite degree, no hatch resulted.

At last, after the loss of a very great number of eggs, he discovered that it was the vapor exhaling from the dung that was the cause of their death.

This vapor was considerable and easy to be perceived on the inside of the box and, sometimes, even, upon the eggs.

M. de Reaumur then made a cask, which he sunk into the dung, leaving the top of it open, and inside of this cask placed baskets with eggs in them, leaving a cover for the top of the cask, which he could slide open at will, so as to regulate the heat and furnish ventilation.

The days now passed one after another and none of the eggs inside the cask had given out the slightest token of corruption.

On the twentieth day the chicks began to pick through the shells and making their voices heard, and on the following day a number of the eggs had hatched and a number of sprightly little chicks were ready to begin life in this world.

One can readily imagine the pleasure this success gave the experimenter, who, for twelve months, had worked on this problem without bringing a single egg to a successful issue.

The thermometer used in these experiments was of a rather rude construction, being nothing but a glass vial filled with a lump of butter, melted, and in it as much tallow as there was butter.

The heat of the egg chamber would render the liquid in the bottle very thin if the heat was too great, or the lump

would remain fixed in one place if too small an amount of heat was present, but if the temperature was right it would flow in the bottle like thick syrup.

Placing the bottle in the bosom before putting into the cask would show how the mixture ought to look.

That any success was obtained at all, with such crude methods, is more of a surprise than the failures, and goes to show that a good many of our modern contrivances may not be so necessary as we think they are.

Later on M. Reanmur tried the fire of a baker's oven. A small carriage on wheels was constructed, in which were several drawers for containing rows of eggs, which could be moved and examined at pleasure, in a chamber placed over a bread oven.

M. Reanmur was so successful in these experiments that he was of the opinion it might be advantageous, in point of economy, to introduce this later method extensively.

He says where there are not the convenience of a bread oven a hatching oven might be constructed, with a stove in it to furnish the heat needed for bringing the eggs to a successful exclusion.

M. Reanmur's method was followed by others, with more or less variations in the methods of procedure. A Mr. Dubois made a heated chamber, in which he suspended baskets full of eggs from hooks in the ceiling, and by lowering and raising these baskets the heat was well regulated. It is not stated how well this method succeeded.

Next in order comes M. Coppiéus, with the introduction of his hot water system, which he carried in a pipe along the floor of a chamber, so constructed that, beside the hot water pipes, flues for the purpose of ventilation and regulating the heat, was made possible. He also placed vessels of water in the room so as to render the air in the room moist. This is without doubt the first method of artificial incubation by the means of hot water.

A number of these hatching ovens were constructed, some of brick and some of earthenware, and was, little by little, discontinued as they were found useless for any practical purposes, one of the makers confessing that he could not average more than one chicken from every six eggs.

What may possibly be the first incubator invented is the one described by Oliver de Seres, the father of French agriculture. He says it was made of copper or iron, in which eggs were arranged and surrounded by feathers, and covered with soft cushions, heat having been communicated by means of four lamps, and the oven was small and portable, but he says that it was more of a curiosity than anything else and would not be of great use.

During the year 1815 Mr. Lawrence, the English writer of a Treatise on Domestic Poultry, says that he tried an experiment in artificial hatching that, on the second trial, proved successful.

He wrapped a number of eggs in wool, put them into a wicker basket, covered with flannel, and suspended this over a chafing-dish of charcoal in a chimney, where there was no other fire, the chimney screen being constantly kept fast to concentrate the heat.

The degree of heat was judged of every three or four hours, by the feelings, and the eggs were constantly turned and transferred from the center to the circumference of the basket.

About thirty or forty healthy chickens were obtained on the second trial from forty-five eggs.

In 1839 was shown in London at the Egyptian Hall the celebrated Eccaleopian, which was examined by an immense number of persons.

This establishment was in a large room in the Pall Mall and it consisted of a large hatching oven, which extended along one side of the room, with an enclosure of similar size on the other for the chickens; while at the bottom of the room was a glass case, in which the chickens were put when first hatched, and in the center a saucer, with eggs broken, to show the different states of progress of the chicken during incubation.

The oven was divided into eight compartments, each of which was furnished with a glass, and each contained a shallow box, lined with cloth, and the bottom covered with two or three hundred eggs, laid carefully, so as not to touch each other.

The boxes were heated with steam pipes and a jug of water was placed in each to insure a moist atmosphere.

In each box the eggs were in a different state of advancement, the object being to have several chickens hatched every day, in order to gratify the curiosity of the numerous visitors of the establishment.

The chickens, as soon as they were hatched, were put under the glass case at the end of the room till they were two or three days old, after which they were removed to the enclosure opposite the oven.

The enclosure consisted of a platform with a railing around it and a row of coops for the chickens to run into, and boxes for them to sleep in at the back.

Here they ran about, picking up bruised grits and other food, all day; and at 6 o'clock in the evening they were put to bed, twelve together, in the boxes behind the enclosure—the boxes being lined with flannel and having a flannel curtain in front.

The chickens, when three weeks old, were sent to the market and sold at about a shilling each.

The eggs for hatching were bought in the common market, and nearly one-half of them proved to be added, but the chickens hatched were strong and healthy, and not more than one in fifty died after they had left the eggs.

The name of the proprietor of this establishment was Mr. William Bucknell.

In a later edition of Mr. Dickson's work, from which the above statement was taken, he says "The Eccaleopian, though it excited a great deal of attention when it was first exhibited, never became generally useful, and, in fact, from the great number of eggs spoiled, it was by no means economical.

It was accordingly abandoned and after a lapse of years another scheme was devised, which was patented about 1844, under the title of Cantelo's Patent Incubator.

The principal difference in the two plans is that, in the Eccaleopian the heat was applied from below, but in the Patent Incubator the heat was applied from above, so as to imitate, as near as possible, the warmth of the setting hen.

The machine, says Mr. Dickson, consists of a long counter, the top of which is filled with hot water contained in water-proof cloth, resting on the eggs, which were arranged in a sort of a drawer.

The water is kept continually in motion by machinery, and it circulates through a tank, heated by a charcoal fire, so that it is kept constantly at the same temperature.

Adjoining the hatching house are rearing houses, to each of which were attached an acre of ground for the chickens to take exercise in, each brood being kept separate by a webbing stretched across the ground so as to divide it into a kind of pens.

This plan was invented by an American and was found to succeed much better than the Eccaleopian, the proportion of the eggs hatched being about 80 per cent.

Mr. Cantelo appears to have been the first to consider the fact that the heat should be applied from above, in imitation of the hen, and without doubt holds the title of the Father of Modern Incubation as, without application of this important principle, success in artificial incubation could hardly have been possible.

This improvement was followed by another of as great importance, namely, the invention of the regulator in 1845, by M. Vallee, poultry superintendent of the Paris Jardin des Plantes.

This regulator consisted of a self-acting valve, by which the temperature was to a certain extent controlled, it was by no means as perfect as our modern regulators, and not at all perfect in its action, but the idea was a most valuable one, and has been in use ever since in some form or other, on all up-to-date machines, and marked a new era in artificial incubation.

M. Vallee kept improving on his invention and finally made one of the most successful incubators of that period; but it seems to have taken a number of years before this machine was made use of in this country, being first introduced by Dr. Preterre, of New York City, and who exhibited it, with the chicks in all stages of incubation, to the New York public. Still later on this invention was much improved by the Graves and by Mr. Halsted, from which the incubator industry of this country seems to date its beginning.

In connection with our subject it will be of interest to note one of these early incubator advertisements of Mr. Graves, prices quoted and recommendations given by a few noted purchasers and users of these first incubators, so we here quote from *The Poultry World*:

Jacob Graves, Incubator and Artificial Mother.

Patented Dec. 27, 1870.

Prices of Incubators:

No. 1,	50 eggs, heat all around.....	\$ 60.00	Boxing, \$3.00
No. 2,	100 " " " "	85.00	" 3.50
No. 3,	200 " " " "	100.00	" 3.75
No. 4,	400 " " " "	125.00	" 4.25
No. 5,	600 " " " "	150.00	" 4.75
No. 6,	1,000 " " " "	200.00	" 5.25

Under the recommendations given below the ad we find one from Mark Pitman and another from James Rankin, both of these well known poultry fanciers, speaking in the highest terms of the Graves Incubator, stating that they had hatched more and stronger chickens in the incubator than under hens that had the very best management and care.

It is also worthy of notice that he offered for sale little incubator chicks, four weeks old, at from \$10 to \$12 per dozen, and a hen to mother them, at \$1.50.

THE PROCESS OF MOLTING.

General Treatise on the Subject, Giving Some Valuable Information to the Amateur.

With the older fowls beginning to look ragged, and loose feathers becoming plentiful in the houses and runs, the poultry yard will be less attractive, than at any other time of the year. The egg basket will show a considerable falling off, many of the hens having ceased to lay. But to make poultry profitable, the birds should have plenty of care and attention bestowed upon them, so as to get them through the strain of molting as soon and with as little damage as possible. Fowls that have their liberty and are well fed usually go through this period without much difficulty. Those that pass the night in warm houses will generally begin to molt sooner than those that roost in cool, open outhouses or on trees. Special care should be taken that the birds have access to shelter during rainy days. A thorough soaking when they are nearly bare of feathers is apt to result in an attack of roup, or cause a chill, the effects of which will last for many months. Fowls that are confined to small runs, should have plenty of green food, lettuce that is running to seed being as good as anything. Some Epsom Salts will be found beneficial twice a week as much as will make the drinking water taste slightly. A little flour of sulphur mixed with the soft food and given in the proportion of a teaspoonful to every three fowls two or three times a week on dry days will help the new feathers to grow. It is of no use to place a piece of stick sulphur in the drinking vessel, as some people do, for sulphur is insoluble in water.

Talking about this ingredient (sulphur) it is well known by the capillary-professional, how it promotes the growth of human hair, and as feathers are greatly composed of sulphur, it must necessarily promote its development generally. But its effect is most striking on black and buff feathers; the black becoming of that shining green as seen in the black Lanshan fowls and for the buff, it colors the feathers to the very roots as well as deepening it in totality. Its effect is a wonder in these two colors.

The cock should always be separated from the hens while the molting is in process. They are often fierce and spiteful when changing their feathers, especially ill-treating some of the hens at feeding time. They will do well in small quarters, if kept clean, fed well and allowed some grit. Exhibition baskets are used by some fanciers to keep the cock birds in at this time, a run of a couple of hours during the day, being all the liberty they have. Small and warm surroundings such as these promote and quicken the molt, which is a longer business for the cocks than the hens, owing to the time the sickle and other tail feathers require to grow.

Any birds that are likely to be required for show purposes, must be kept out of hot sunshine, or they will become tinged and sunburnt. Old hens that are to be got rid of and which it is intended to kill for the table should be disposed of just as they begin to shed their feathers. It is not always easy to tell from the appearance of a hen, as she runs about, whether she has begun to molt or not. Some hens will stop laying and will hardly eat anything for a few days and yet not shed any feathers, till they suddenly appear most bare. They will lose flesh rapidly during the interval after they have lost their appetite. If a visit is paid to the roost, those that are still laying will be found with full crops, while those that have stopped laying, will have but little food in them. No great mistake, therefore, can be made, if those hens that are on the perch at that time with empty crops are selected for killing. The poultry house should be kept clean or the accumulation of loose feathers in the corners will tend to the increase of insect vermin.

The molting of the fowls is usually from June to November, sometimes extending well into winter. The molting season is not the same with all hens, nor does a single hen begin at the same period every year, but usually a month sooner or a month later. For instance, if a hen begins to molt in June, she may not begin the following year until July and such hens will molt later every year until their molting period reaches into the winter. The hens that begin to molt early are those that finish their molting early, and are ready for laying before winter commences. Having then completed their growth of feathers, they are in excellent condition for doing service, but should the process of molting extend into winter, the hens that have not yet finished will probably not lay until spring, consequently the matter of molting is one, which all who are interested in fowls must deeply consider.

The molting process really requires three months, and as the

production of feathers requires a large proportion of nitrogen and mineral elements it becomes necessary to supply the fowls with something more than grain and grass. Carbonaceous food exclusively is detrimental, as the hen is inconvenienced by the fat stored on the body rather than benefited thereby, and yet the majority of poultrymen feed liberally on grain to their molting hens, in the belief that such food is the best that can be given. The food should consist principally of ground meat, cut green-bones that have a fair proportion of adhering meat, but all fat foods should be avoided. A bran mash, composed of bran and mashed potatoes, will provide an agreeable change while ground bone, milk and a little sulphur in the food once a day will benefit them highly. All hens, not yet having commenced to molt, will prove poor layers before Christmas and if such hens are fat they should be disposed of. It is a well known fact that if a hen or pullet does not begin to lay before the cold weather sets in, she will perhaps not begin to lay before early in the spring, but if she starts to lay before the winter begins, she will continue to lay for a long time, or until she becomes broody. Pullets hatched in spring will not begin to molt until the following year, as only the hens will molt in summer; but a pullet that was hatched very early, about January or February, may molt, though the chances are that she will not do so, until next year. Clean dry quarters should be provided for the hens that are molting and lice must be kept down, as the hens that are molting will quickly succumb to lice, owing to the debilitating effects of the process; as to the males they should have been sold off long before, as it does not pay to keep one that is molting unless such male possess some characteristics that is sought and the sooner the males are sent to market, the higher prices they will realize.

More diseases are generally contracted during the molting period than at any other time and by the use of good, sound stimulating food, pure water, plenty of room, and good clean quarters only, can we pull through it with safety. The heavy strain upon the constitution of fowls in casting their feathers is much greater than one would suppose and if the best of care is not adopted, they become reduced in condition to such an extent that the liability to contract diseases is so alarming that they can scarcely escape it. The worst thing that can be done is to crowd too many in one roosting place at night, in badly ventilated and unclean quarters. Make everything clean first, and use disinfectants. The best disinfectant that has ever been tried is crude carbolic acid and coal-oil, about one pint of the acid to one gallon of kerosene. Use this cleverly and do not be stingy with it. Thoroughly paint the roosts and the dropping-boards or better still, the entire inside of the poultry-house. Painting the roosts once or twice a week through the molting season. Allow no more fowls in one house than there are roosts to accommodate them comfortably, giving each fowl enough space, so that it may set without touching another. Feed good, sound grain and by no means the refuse of anything. Do not confine them to one variety of food, but different varieties: corn, wheat, oats, buckwheat, any good, sound grain relish and occasionally a little sunflower seed, if procurable and a meat ration, once per week. The importance of good, pure water cannot be overestimated and twice per day is not too often to change it and to this occasionally should be added a stimulant by taking two ounces of sulphuric acid and one pound of sulphuric iron and dissolving the two in one gallon of water. This should be kept carefully corked up, and about twice a week one tablespoonful should be added to each gallon of drinking water. Air slacked lime has been largely used and by many recommended to scatter it freely in the poultry-houses, during molt, although it has been proved to produce an irritation in the nasal organs of the birds and colds usually follow and all poultrymen know what follows colds: the deadly roup.

Really, molting is a very trying experience, through which fowls have to go annually and to have them come through with good feathers and be in good laying condition is the problem with which every poultry raiser has to deal. The easiest and the most profitable way of caring for fowls during this period is to make them molt as early as possible; easiest because the fowl that is slow in molting is in bad health, the period should be shortened as much as possible.

If a hen persists in laying, change her from one place to another, if running at liberty, coop her up. To bring on the molt by feeding, as suggested, and make the period one of rest, as much as possible. Give shade and plenty of cool water, not exposed to the heat of the sun, keep the coops clean, and if fowls droop, give them a tonic of muriated tincture of iron, one tablespoonful to each gallon of water. Give plenty of sharp grit and occasionally mix clean sand with their soft food, and a pan of crushed charcoal where they can have free access to it, is very beneficial.

36,000 A. P. J.'s for August, 1905.

State of Illinois, County of Cook, ss.

Chicago, July 25, 1905.

James W. Bell, manager of the Recorder Publishing Company, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding thirty-six thousand copies of the August, 1905, issue.

JAMES W. BELL,

Subscribed and sworn to before me this 25th day of July, 1905.

BLANCHE ELDER EDDY,
Notary Public.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Ho! For Portland.

Judging from the reports that reach us from throughout the great west the Portland live stock show and poultry exhibit will wake up more breeders in that section than anything in years. The states of Oregon, Washington, Idaho, Utah and California will be there in things hen "clear up to their necks." Oregon will send about ten carloads of her best birds; Washington will exhibit half as many, undoubtedly; Californians will go up with a trainload of fowls and beard the lion in his lair; Colorado will show probably a carload, if arrangements are perfected, and Nebraska is now making further arrangements with the commission which has charge of the Nebraska displays to send a carload of her cream. This state has been given \$200 to pay expenses of birds, but this amount

will undoubtedly be increased, as there have been many applications since the appropriation was made. The Hon. T. L. Norval, who worked so creditably for the state of Nebraska at St. Louis World's Fair, now is pushing the carload idea among the commissioners, and undoubtedly the appropriation needed will be granted. Nebraskans are the breeders farthest east who have decided as yet to show at Portland.

Advertisers' Personalities and Originalities.

The student who closely follows the advertising of some of the big advertisers will find that in the ads they place here, there and yonder, is a quality all their own. Some one's personality breaks through the lines and stares the reader in the face. The old style "John Jones, Breeder of all Varieties of Rocks, Dotts and Spots; Write for Particulars, Cess-pole, Bermuda," is pleasantly lacking. This down-to-date advertiser is getting more out of his space than his neighbor—because he puts more into it. A Californian who puts out a line of good ads that recall his name when Rhode Island Reds are spoken of says the Reds are "not dissipated, enervated rounders or demoralized city-bred birds with abnormal appetites and inbred egg-eating and feather-pulling qualities, nor are they the result of neglect and prison-like confinement for generations." Along further he says "they are not stupid, senseless feeders that gorge themselves to exceeding muchness, neither are they high and mighty flyers, or nervous, flighty sitters and mothers." This man's Reds "have a color all their own and a cackle sweeter far than Swiss chimes," all of which is but to make the ad stick in one's memory—and it sticks! That's why it pays to study originality and personality in the construction of advertisements. Around the original advertiser's yards there is always something doing in the line of business. He studies the making of ads like the mating of birds and as a result he has no "dull months" or "blue days."

Give Us Facts.

A year or so since one poultry journal published a story of the world's largest poultry farm located up in New Hampshire. It was said that from 8,000 to 10,000 hens are kept in about 600 small houses. The hens, it is said, are never allowed free range of any kind, but are at all times confined in the small eight by twelve coops, which are open on the front, being covered only by wire netting. A number of poultry papers have commented on this farm, and the farm press has also fixed up stories of it here and there, running them as if they were true, indeed. It is this brand of story that gets so many into the poultry business with the idea that all there is to it is setting the hen on the eggs—and she will do the rest. Undoubtedly a great deal of free range is used for this farm, if it exists. It is said that a dollar a year is made off of each hen, but under the kind of management that one of the best stories of this farm tells of it would be impossible to make one dollar per year on each hen, taking into consideration a fair share of good sense and reason for studying out the fallacies. Man was given the sense of reason to

ascertain the truth. It seems that a great many editors who have run this story have forgotten to look into the details, or they were so ignorant that details made no difference to them and the size of the story is what appealed to their fancy.

Capon Industry Growing.

The caponizing of young cockerels is a very important and paying branch of any poultryman's business. The idea of market capons is growing wonderfully and each season sees the demand grow to larger proportions. The market poultry grower cannot afford to send his young cockerel roasters to market as such. He is throwing away a good deal of the profits. He can always find time to do a little caponizing and as the art or science is easily learned, the cost is nothing. Broilers sold at one dollar each at one and a half pounds can be kept over and caponized. Some small range will be needed to grow the frame on them and then they may be yarded and fattened with finishing feeds for the winter market. There is plenty of demand for twice the supply at any market east of Chicago. This leads one to ask why so many fancy poultry breeders do not take advantage of it. They always have cockerels to cull out of the flocks that would make the best of capons and bring highest prices. If any of the AMERICAN POULTRY JOURNAL readers have ever sent their cull males to market as capons we would like to hear of their success.

More Poultry Education.

Among the eastern novelties in the way of chicken things that have put in their appearance this year is an attractive display of incubators and brooders, under the management of Mr. Nones at Luna Park, Coney Island, New York. Mr. Thomas, the electrician of Luna Park, has opened this place of amusement or education, as it were, and there is a complete line of all sizes of incubators and brooders, each and every one in thrifty operation. The incubators are set so as to produce chicks daily, and brooders to draw the people are on the outside of the attraction, all filled with chicks. A stereoscope with electric lights by which to gaze on the eggs in the process of incubation gives one an opportunity to see the eggs in every stage of development. It is said that even the pulsations of the heart of growing chicks may be observed through the shell by this stereoscope. There is no doubt that this public hatchery, where an admission is charged, will do something to increase the attendance at the New York poultry shows the coming winter. It is one of the best paying attractions at Luna Park and will be open the whole season.

Shape vs. Color Again.

It is a well known fact that English fanciers strive to excel in color, letting shape and form of the various breeds take care of itself. Mr. W. M. Elington, who is one of the best writers for Poultry, the noted English contemporary which reaches us regularly, says that a good many all round judges in England confuse the shape of the Wyandotte with that of the Plymouth Rock. He also insists that even among the specialists, those who know, or should know, more

about the variations in shape of the two breeds, he would be a bold man who put shape before lacing and color. Then he adds: "Who shall say which is right, the American, with his firm belief in form, or the Englishman, with his preference for plumage? Both are striving for perfection, though by different routes, and who shall say which will get there first?" It would appear that our maxim, "Shape makes the breed and color the variety" would not hold the judges to the task of defining the standard as we see it. We are all acquainted indeed with the great superiority of lacing to be found in Wyandottes of the golden and silver varieties, English bred, over those of the best breeders in this country. Mr. Elkington says that he is looking forward with great interest to the awarding of some special prizes that the Partridge Wyandotte Club of American has given to the Partridge Wyandotte Club of England for the purpose of rewarding the particular points of shape and color. In other words, these specials will be offered for the best shaped males and the best shaped females in the Partridge varieties. Mr. Elkington suggests that the partridges have made such rapid advancement in regard to quality that it will be interesting to see how near to these shape awards the class winners will come. He wants to note the difference between the shape of the best shaped bird and the bird which received the special award for color. He adds that it will be a great experiment in his country and inasmuch as he is quite an observer we will look forward to his chronicling of the facts with much interest.

In all poultrydom there has never been a man who has done more for his private hobby of choice pheasants and almost extinguished varieties of fowl than Mr. Homer Davenport, the famous cartoonist, whose farm is in New Jersey. At the forthcoming Lewis and Clark exposition he will exhibit a great many of his rare varieties, and it is said now although we do not know on whose authority, that he has built a bird farm of nearly half an acre where he will show the best birds in the varieties he breeds, to the whole exposition. Mr. Davenport, it is stated, is a native of Oregon. We would advise fanciers who visit the exposition to look for his exhibit as it will be interesting, to judge from those he has made at the best poultry shows in the east.

* * *

There has recently been brought to light a woman buyer of eggs for hatching who "kicked" because some of the chicks, White Plymouth Rocks, were smutty in color. It is well known that American fanciers believe that the slightly colored or smutty chicks are the whitest on maturity, although there has never been any statistics set forth to prove this assertion. The good lady was informed concerning this and the seller of the eggs for hatching was indeed surprised to receive an answer to

his letter, she "kicking" harder than ever because all of the chicks in the clutch were not smutty in color!

* * *

The popular Maurice F. Delano, who has lately been connected with the Millville Poultry Farm which is now given over to market poultry exclusively, will move to his old home at Suffield, Conn. On good authority it is said that he will install himself in the poultry business gathering about him the best specimens of fancy poultry and of breeding stock that he can secure. There has been no more popular breeder of fowls who has risen so quickly from the novice ranks to those of a professional showman and breeder, than Mr. Delano. He is an excellent judge and we are sure that when he gets his new farm on its feet and he can give more attention to judging, that his services will be in good demand. We are pleased to chronicle this change of Mr. Delano's as we know it will be good for him.

* * *

The office of the *Industrious Hen* has been removed from Madisonville, Tenn., to Knoxville, Tenn. We wish the *Hen* success in the new nest.

Poultry Jottings.

Clean the brooder every day and bed it down (the hover) with chaff. In damp weather do your best to keep the hover dry.

Kill the head lice of the chicks with vaseline. Grease their heads slightly and see that none gets in the eyes. Repeat the dose in ten days.

Your best mating this season has produced some rank culls and this is another evidence that "like does not always produce like."

Keep your hen house cool during the hot months but avoid drafts. Roosting in a draft has sent many a promising youngster to an untimely grave.

Above the door of every poultry-house should be written this motto: "Utility is the science and beauty, the art of poultry raising."

Don't neglect the roosting coops of the young chicks this month. If you expect your chicks to grow rapidly the roosting coops must be kept sweet and clean.

Do not "stuff" your chicks in your endeavors to make them grow. This will do more harm than good.

Shows are the round-up of the poultryman's flocks. A prize won at a winter show is a badge of excellence.

Clean the nests thoroughly, provide new nesting material and sprinkle well with lice powder.

Read our prize offers for articles on different subjects in this issue and try to win some one of them.

Some of the Foremost Poultry Judges in America Have Pronounced my Catalogue of

AMERICA'S "BIG FOUR"

The neatest, most complete and business-like gotten up catalogue they have ever received. I use trap nests exclusively and know the ancestry as well as the unprofitable layers. Will send catalogue free to all who mention American Poultry Journal.

O-K. POULTRY FOOD

Moulting fowls give a languid appearance to the poultry yard. The hens stop laying and mope listlessly about. Even the cocks are indifferent and taken altogether they're ragged, lazy looking set. The poultryman's profits drop to the minimum while he waits for his fowls to get busy.

Moulting is necessary to the fowl's welfare—it's a time when Nature restores the birds to their full vigor and strength.

You can hasten the process and shorten the period of non-productiveness by supplying Nature with the elements needed to reinvigorate your fowls, by feeding

O-K. Poultry Food

They need bracing up. They need help. Give them food that will create fresh vitality, renewed vigor and strength, that will give energy, and you will set Biddy to manufacturing fresh eggs in a much shorter time and at a rapid rate. They should have a conditioner that will tone up the system, make new, rich blood, and put fresh activity into the whole system. They need a food like

O-K-POULTRY FOOD

something that will put them on a profit producing basis. O. K. Poultry Food is a pure guaranteed conditioner—furnishes the needed elements for putting the egg-making organs in perfect condition. Aids digestion, restores health, vigor, vitality; keeps fowls lively and strong. A disease preventive that also cures Gapes, PIP, Roup, Cholera and Leg Weakness.

It will pay you to give O. K. Poultry Food a test during moulting time and see how fast the pale combs grow red; see the fluff fill out and the trim sprightliness—sure signs that there will be plenty of eggs in the nests before long. Sold by dealers. If they can not supply you, order from us direct. Send for free circular.

O-K-Stock Food Co.

408 Monon Bldg., Chicago

THE INCUBATOR MANUFACTURERS' ASSOCIATION OF AMERICA—SECRETARY'S REPORT.

To the Poultry Press of America:

The third annual convention of the Incubator Manufacturers' Association of America was held at the Claypool Hotel, Indianapolis, Ind., July 18, 19 and 20, 1905, with a strong attendance of representative incubator manufacturers, Pres. A. F. Cooper presiding.

Owing to the absence of Sec. J. S. Gilcrest, on account of sickness, Milton O. Adams was appointed secretary to the meeting.

Following the president's annual address and reading of the minutes of the last meeting the various committees' reports were handed in. The committee on freight rates reports that it's quite possible to secure a reasonable concession from the various railroads. This reduction of freight will be of considerable saving to the purchaser. Previous to the organization of this association incubator purchasers were obliged to pay the first-class freight rates with no hopes of a possible reduction. The association will secure many concessions of a similar nature that will benefit consumers.

The Committee on Insurance finds that incubators are far less dangerous than the average house lamp.

Mr. John W. Myers delivered an excellent address on adjusting difficulties and misunderstandings whenever such arise between manufacturer and customer. His views of the matter were in direct line and perfect harmony with those of all present. The disposition of the manufacturer is to be perfectly just and to

dispose of all such matters in a wholly just and equitable manner. Every manufacturer has the interest of his customers deeply at heart.

Mr. Milton O. Adams delivered an address on feeding hens for fertile eggs, emphasizing how necessary it is that every incubator operator use the utmost pains in handling his breeding stock to secure the highest possible relative degree of fertility in eggs produced for hatching purposes. The members of the association freely express the opinion that the chief source of all incubator troubles lies largely in the use of eggs that are not properly fertilized.

Mr. Jas. Homan delivered an address on incubator advertising, which besides being full of instruction for the manufacturer, also brought to mind the relation between the poultry press and this organization.

There was a general discussion in regard to the importance of every manufacturer becoming a member in this association, as it will be necessary to have the support of all in order to accomplish the great amount of work mapped out. Some have misconstrued the publicity previously given the association and have misinterpreted the motive. The sole object of forming the organization is to create more harmony among the manufacturers. The incubator industry is no longer a one dollar industry but a million dollar industry and there is a crying need for an organization of its constituency. The poultry press organized. The representative American poultry breeders have the A. P. A. Almost every recognized breed of fowls is represented by its association; states, counties and communities all recognize the importance of

organizing to further the poultry industry in their territory, and it naturally follows that the incubator manufacturers can likewise band together for their good. It is not the intention to dictate prices nor the territory which he shall operate nor anything of that nature. This is a mistake. The report got out at one time that there was a prospective incubator trust in view. Nothing could be further from the truth, as the incubator industry is not composed of men who favor anything of this nature.

While the principal point in view when organizing the association was to help the consumer, yet there are many things which will benefit the manufacturers themselves embodied in this movement.

The incubator industry has attained such proportions as to be worthy the support in the most intimate manner of all interested in it and it's only through the closest organization that many benefits will be derived to the fullest extent.

The following officers were elected for the ensuing year: President, Mr. James Homan, Springfield, Ohio; vice-president, L. A. Banta, Ligonier, Ind.; treasurer, Mr. J. W. Myers, Quincy, Ills.; secretary, Mr. Milton O. Adams, Hiawatha, Kans.

The retiring president, Mr. A. F. Cooper, owing to his no longer being an active incubator manufacturer, which would render him not eligible to holding office, was made honorary member for the many valued services he has rendered the association. *The Inland Poultry Journal* and the *Fanciers' Gazette* royally entertained the members of the association.

The proceedings of this meeting and full particulars regarding the organiza-

You can Raise All your Chicks in this Brooder

Your success and profits in poultry culture depend altogether on the chicks you raise. You may be unusually successful in obtaining big hatches, but what does that profit you if you fail to raise them to marketable maturity?

Have you ever figured out how much you lose every year in the loss of young chicks during the brooding stage?

Count your time, labor, eggs and oil if hatched in an incubator and it amounts to quite a sum at the end of the season. But that is not all—you lose whatever profit you could have made upon each chick that dies prematurely had you been able to raise it to marketable maturity.

You no doubt realize all this and have hoped that some one some day would put upon the market a brooder that would enable you to stop this discouraging and common loss.

That hope has been realized, and right here is that kind of a brooder. A brooder so correct in its principles of construction; so wide in its range of adaptation, and so perfect in its arrangement that there is **not** one chance in one hundred for a chick properly hatched to die.

That may seem like "claiming" a good deal, but we have the machine and the **proof** to back it up.

For twenty years we have been making brooders and in all that time we have never produced until now, anything which has proven so **practical**, so completely successful for outdoor purposes as our new Combination Colony Brooder.

The New Prairie State COMBINATION COLONY BROODER

is a decided improvement in brooder building. It is **different** from any other—has **new** points that you will recognize are winners. It is made not only to meet every condition of climate and weather, but every condition of **growth** and development of the chicks.

Under the most severe tests we could possibly give it of **storm** and **weather**, it has gone way beyond our highest expectations. The chicks thrive and develop so much better and faster that we could not help but feel very enthusiastic over it, and we know you will, too, when you know it from the same source that we do—that is, from **actual experience**.

We have just issued an advance **Special Brooder Circular** which tells all about it, and all the other New Prairie State Brooders we are going to offer the poultry people this year. It gives photographic illustrations of them—shows the **inside** and the **outside** construction and the plans of arrangements in detail. You ought to send for one of these circulars. You will be surprised at the many **new** and advantageous points these new brooders possess.

Here is the solution to the greatest problem the poultryman has had to contend with. We have spent years in solving it for you and all we ask is a careful consideration of our efforts. The evidence of the **real merit** of the New Prairie State Brooders is apparent in the machines.

You will regret it if you fail to send for this brooder circular. It is free.

Prairie State Incubator Co., Box 468 Homer City, Pa.

tion can be obtained by every incubator manufacturer from the secretary. Yours truly,
M. O. ADAMS, Secretary,
Incubator Manufacturers' Association.

MEETING OF THE POULTRY PRESS ASSOCIATION.

INDIANAPOLIS, IND., July 21, 1905.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: As previously announced the Poultry Press Association held its first annual meeting at Indianapolis. Realizing that we are on short time for the first of month papers with information I am giving you copy of Constitution and By-laws adopted, together with names of officers elected and editors of papers who expressed a willingness to join us at this time. It is unavoidably crude in the rush but we have undoubtedly built a foundation that by careful planning and good architectural work on the part of its members should amount to a great deal to each and every one who is in the publishing business.

The meeting was one of harmony from beginning to end and every one seemed to feel that we had started on the right course and would accomplish a great deal in the end. There was no definite place for the next annual meeting. The incubator men are very much in favor of our meeting with them at such time and place as agreeable to all concerned.

On Thursday the *Inland Poultry Journal* and the *Fanciers' Gazette* entertained the Poultry Press Association and Incubator Manufacturers at a banquet and boat ride at Broad Ripple Park, a suburb of Indianapolis, and the members were so taken with it that each and every one of them were unanimous in their choice to returning to Indianapolis on about the same date next year; however, this will be decided later by vote.

The membership fee of \$5.00 it is necessary that each publisher should send to the treasurer, Mr. Frank Heck, of the *Successful Poultry Journal*, Chicago, so that copies of Constitution and By-laws and proceedings may be printed and distributed for the information of those who have joined and others who expressed a willingness to come in later on. While the attendance was not as great as was expected, there was a lot of enthusiasm and the right sentiment on the part of every one.

There are many things that this Association should consider. We have just the same right to clean our own house as to demand that the advertiser clean his, and publishers who are negligent, careless and sloven in their way of doing business have no place in this Association, and at the beginning is a good time to keep them out. We want every wide awake poultry editor in the United States and Canada to join our ranks and we know he will be profited by it a thousand times more than his initiation fee and small annual dues he will be called upon to pay.

The important resolutions that were adopted, or rather agreed upon by the members present with the understanding that a vote would be taken by mail, are the following:

That all free reading notices forwarded to the publisher by individuals or advertising agencies be eliminated. Understand by this resolution that the editor can use his own good judgment in regard to whatever he may desire to say about an individual or company. The idea is to eliminate entirely the stereo-

type stuff that has been filling our pages for years to the detriment of the editor and without any gain to the advertiser. This matter was submitted to the incubator men in session at that time and it was universally agreed by them that they desired stereotyped readers cut out, to pay for what they got and place every man or company on the same footing.

Another proposition agreed upon by the publishers present was that specialty clubs that are in the field competing for advertising, and who are in fact publishers, be refused space in papers unless paid for at their regular rates. Specialty clubs that are interested in promoting their varieties in the right way without competing for advertising shall be given fair consideration.

It was also requested that all members of the Association forward immediately to the Secretary, Mr. J. F. Schureman, *COMMERCIAL POULTRY JOURNAL*, Chicago, Ill., a list of the bad accounts that they have on their books that are in arrears six months, or more, in payment. These accounts refer to all advertisers that in the opinion of the editor or publisher might be classed as *bad debts* and are not making the proper effort to pay their bills, and not to the class of advertisers who through misfortune or unforeseen circumstances are delinquent but who are considered by the editors honest and who will in the future pay their bills.

We have outlined work for the secretary that will take up considerable of his time for which it will be necessary for us to at least pay the time of a stenographer and such incidental expense as will be incurred in the transaction of this work.

It is not the intention of the Poultry Press Association to give any more publicity to these meetings than is absolutely necessary and that what publicity is given is with the understanding that we are working for the betterment of every honest advertiser; that it isn't a combination or trust in any sense of the word, but an association for perfecting a better understanding between editors and assisting materially in the building up of the poultry business. At our next annual meeting it will be expected that members prepare papers on whatever subject they may desire to be read, and these papers to become a part of our records and be used by the Poultry Press, or at least such part of them as will be of general interest to the breeders of this country and abroad.

While we realize in giving this outline we are only able to cover a part of the field in the little time we have at hand, and especially for the editors whose papers are issued the first of the month, I am compelled to cut it short.

The election of officers resulted as follows:

President, Mr. Geo. E. Howard, Washington, D. C.; vice-president, Theo. Hewes, Indianapolis, Ind.; secretary, Mr. J. F. Schureman, Chicago, Ill.; treasurer, Mr. Frank Heck, Chicago, Ill.; Executive Committee—Grant M. Curtis, Buffalo, N. Y.; H. B. Donovan, Toronto, Canada; Chas. C. Johns, Tacoma, Wash.; E. B. Cogshall, Denver, Colo.; J. Sleeper, Peotone, Ill.; J. H. Sledd, Knoxville, Tenn.; A. D. Hosterman, Springfield, Ohio.

The following papers were represented and their editors and managers took part at two sessions held by the Association:

American Fancier and Feather, Washington, D. C., Geo. E. Howard and T. F. McGrew; *Poultry*, Peotone, Ill., J. Sleeper; *Commercial Poultry*, Chicago, Ill., J. F. Schureman; *Successful Poultry Journal*, Chicago, Ill., Frank Heck; *Poultry Success*, Springfield, Ohio, A. D. Hosterman; *Fanciers Gazette*, Indianapolis, Ind., W. C. Pierce and E. A. Pierce; *Industrial Hen*, Knoxville, Tenn., J. H. Sledd; *Grit and Steel*, Gaffney, S. C., represented by Dr. H. P. Clarke. Indianapolis, Ind.; *Inland Poultry Journal*, Indianapolis, Ind., Theo. Hewes.

The following papers had forwarded letters to the secretary desiring to become members of the Association and in the majority of cases submitting their ideas as to what course it would be best

SOMETHING NEW

STRATHMANN'S POULTRY YARD SEEDER

To Distribute Grain and Seeds For Scratching Fowls

A machine any one that keeps a dozen chickens ought to have. The extra profits of same will pay for seeder in one year. Its weight is 30 lbs., sows two rows 10 in. apart and cultivates your ground. Will do what all poultrymen and journals say, keep your chickens scratching. Our seeder has proved itself a winner at the Chicago poultry show by having a larger attraction than any other exhibit. Simple, durable and practical; can't get out of order. Any boy or girl can operate it. Send for circular.

Strathmann Mfg. Co., 140 E. Fullerton Ave., Chicago, Ill.

12 Turns Kills All The Lice

An easy way to get rid of lice—easy on the fowls—easy on the owner. Simply sift lice powder into the machine, put in a few hens, turn the crank slowly a dozen times, let them out and see the dead lice fall off their bodies.

Lightning Lice Killing Machine

wastes no powder, doesn't choke or harm fowls, can't break their feathers and makes fowls contented, fat and lively. That means more eggs and sweeter flesh. Thoroughly cleans 100 hens or 300 chicks in 60 minutes. Handles any fowl from smallest chick to largest turkey. It puts the powder next to the skin and makes its effect instantaneous—quick as lightning. Illustrated catalog with full explanation, free.

Charles Schild Co., 2 Frankfort St., Cleveland, Ohio

to pursue in the forming of an association of this kind:

AMERICAN POULTRY JOURNAL, George G. Bates; *American Poultry Advocate*, C. DePuy; *Ohio Poultry Journal*, J. C. Ely; *Poultry Herald*, E. W. Rankin; *Western Poultry Journal*, E. E. Richards; *Canadian Poultry Review*, H. B. Donovan; *Mid-West Fancier*, C. S. Hunting; *The Poultry Advocate*, J. W. Cadwald; *Orpington Poultry Journal*, Percy Cook; *Progressive Poultry Journal*, J. N. Crow; *Poultry Keeper*, Fanny Piggott; *New England Poultry Journal*, D. L. Hondlow; *Poultry Standard*, R. N. Clark; *Reliable Poultry Journal*, F. C. Hare and Grant M. Curtis; *Southern Poultry Courier*, H. S. Budd; *Poultry Life of America*, H. B. Savage; *Pacific Poultryman*, Charles C. Johns; *Western Poultry World*, E. B. Cogashall; *Poultry Item*, H. H. Fricks; *Poultry Gazette*, G. D. McClaskey; *Poultry News*, Paul F. Williams; *Grit and Steel*, Ed H. DeCamp; *Southern Fancier*, H. F. Peils.

In view of the fact that the papers had expressed a willingness to become members of the association they were unanimously voted in as members, and it is to be hoped that each one at their earliest convenience will forward \$5 initiation fee to our treasurer, Mr. Frank Heck.

Assuring the editors of the poultry press throughout the United States and Canada that it seems to the writer it is essential and for the good of all that we make this a permanent organization and one of vast importance to the poultry business of this country, and I hope that each and every paper that is included in our list will feel it their personal duty to do everything in their power to further the interest of the association that all outsiders may become encouraged to come in and be members, and wishing you the greatest of success in your efforts to make the poultry business bigger and better and with kind regards, I am, very truly yours,

THEO. HEWES.

CONSTITUTION AND BY-LAWS OF THE POULTRY PRESS ASSOCIATION.

(1) NAME.—The name of this organization shall be "The Poultry Press Association of America" with headquarters where the secretary resides.

(2) OBJECTS.—Its objects shall be the cultivation of social relationship between its members and free exchanges of ideas and discussions for means to promote the best interests of poultry culture and for the elevation of the standard of our vocation.

(3) MEMBERSHIP.—The membership

of this association shall be confined to reputable poultry papers and agricultural papers containing poultry departments, and the membership shall be held in the name of the paper.

(4) OFFICERS.—Its officers shall be a president, vice-president, secretary and treasurer, and an executive committee composed of the president, secretary and seven other members of the association, to be elected annually, with the duties of such officers.

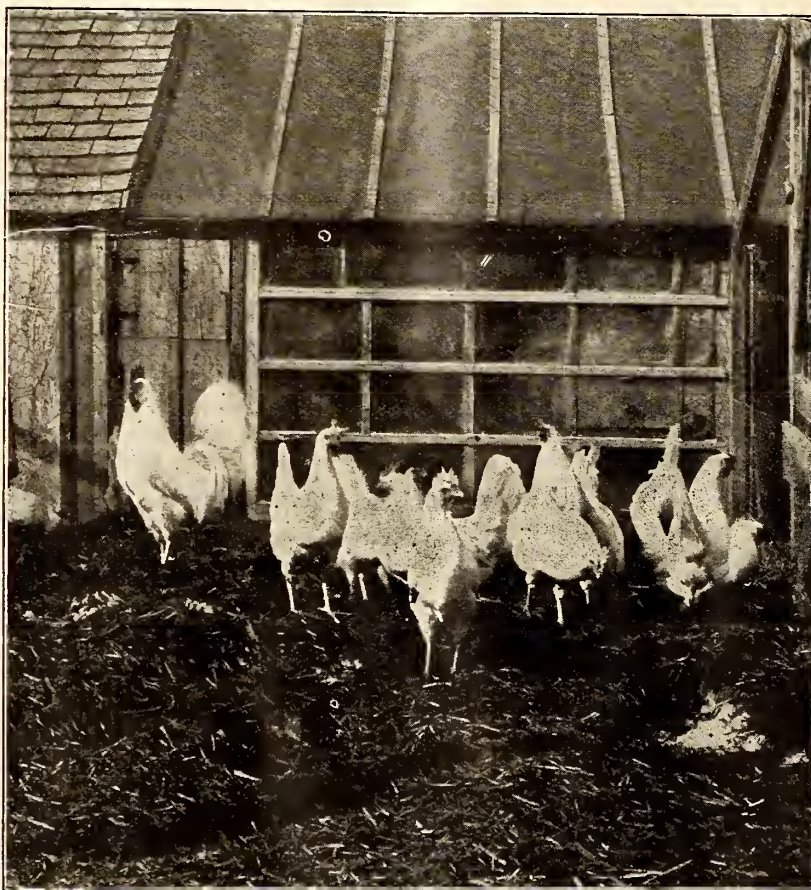

(5) FEES AND DUES.—A membership fee of \$5 will be charged each member. The quarterly dues shall be \$1.25, payable on January 1, April 1, July 1 and October 1 of each year and the executive committee has the power to call for an additional assessment if it is found necessary in order to properly conduct the business

be recognized on the floor or be permitted to vote.

(7) VOTE.—Each paper represented shall be entitled to one vote only on all questions.

(8) MEETINGS.—An annual meeting shall be held at such time and place as a majority of the members shall designate. This vote shall be taken by mail during the month of November of each year and notice of said meeting shall be given by the secretary to all members not later than December 1. Special meetings may be called at any time by the Executive Committee provided that all members of the association shall have thirty (30) days' notice of said special meetings.

(9) AMENDMENTS.—Additions and amendments to the constitution and by-laws may be made at any regular meet-

Cockerel Breeding Pen of S. C. White Leghorns. Owned by W. L. Fern, Elgin, Ill.

of the association. In case such dues are not paid within thirty (30) days from time they are due, the membership shall be suspended. In case such dues are not paid before the next annual meeting, the membership shall be forfeited and the paper thus forfeiting membership can be reinstated only by a majority vote of the association, upon payment of all arrears to date.

(6) ADMISSIONS.—Members can be admitted at any time by the majority vote of the executive committee, providing the membership fee accompanies the application.

It is understood that the membership is held by the paper and not by an individual, and in case any person other than the recognized publisher of the paper is present as a representative of said paper, he must produce credentials from the publisher, which shall be submitted to the Executive Committee and by it approved before the holder shall

ing by a two-thirds vote of members present, provided that notice shall be given by mail to all members sixty (60) days prior to the date of meeting.

"We will offer a prize for the best plans for a poultry house suitable for a farmer. We want the plan to show at least one elevation of the poultry house and also the ground plans; we also want plans for a poultry house used in the village or by small breeder to show elevation and ground plans and a short description of both houses. For the best plans submitted to us on or before September 1, 1905, we will give a check for \$25.00. The plans to be our exclusive property. The plans that we do not award, we reserve the right to buy to be agreed upon by us and the person who presents them. If any further information is wanted, please address all communications and plans to the J. W. Miller Company, Freeport, Ill."

POULTRY ADVERTISING.

Selecting the Medium—Preparation of Copy—Contract for Space by the Year to Get Results..

Some time ago I had something to say regarding this subject in the columns of THE AMERICAN POULTRY JOURNAL, but as considerable time has elapsed since then there are doubtless a great many new A. P. J. readers and, too, there are many new developments in this branch of the industry which were not then mentioned. Should I happen to repeat some of the sentences of my previous article I trust I may be pardoned for it for not only the reasons mentioned above, but also for the reason that something new said at this time may demand it in order to make my arguments plain.

From my experience in the field of advertising I know it to be a timely subject. The beginning of a new year, starting on a new page in the poultry business is in order. If you have an idea of advancing or enlarging your poultry business you cannot well afford to overlook the advertising.

Advertising is the magic word that moves the world in these stirring times. Take away the advertising columns of any paper, no matter to what class it belongs, and you have removed a very important part of the paper and also got rid of a whole lot of subscribers.

Advertising is an endless chain. Readers will adhere to the paper with the most and best advertising and the advertisers will cling to the paper with the most and best readers. The advertising rate of a reliable paper is established according to its subscription list. When an advance in rates is announced, it means just so many more readers, and it's a dead sure thing that a paper like the A. P. J. will not advance its advertising rates unless the publisher is certain beyond a doubt that he can produce results according to that advance. He is not only watching his advertisers and their interests, but is constantly devising means to secure helpful and interesting reading for his readers. His aim, too, is to add thoughtful and intelligent readers. His eyes are everywhere, looking for the best people, and no one knows how to gain these points better than the progressive publisher.

Patience is a virtue in advertising the same as in any other branch of the poultry business.

You plant your seed and must wait for it to come up and produce a crop. It depends on you what that crop will be. If it was well planted in the right season, it is pretty sure to sprout. But your responsibility does not cease here. You must nourish your advertising just as you would your crops. Your corn would soon be overcome with weeds if it were not cultivated. So will your advertising. Just as in the beginning, when corn raising was in its infancy, you must learn to distinguish corn from weeds; good advertising from poor publicity. You must dig out the poor stuff and, while you may make some mistakes and occasionally pull up a good stalk, if you are watchful you will not make the same mistake a second time unless it is sheer carelessness.

Impatience is the cause of a great many failures in business and especially in the poultry business. Can't wait for results. The thought that the first ad should cause a deluge of orders will pre-

THIS MODEL POULTRY PLANT

operated by the Columbia School of Poultry Culture, Waterville, N. Y., is covered with Paroid Roofing. Here is what they say about it:

"We are sending you photograph of our buildings covered with your Paroid Roofing. This material is giving us excellent satisfaction and we are very glad to extend to you the privilege of using the illustration."

PAROID ROOFING

has no equal as a durable, economical roofing. Used by thousands of poultrymen and farmers for roofing and siding all classes of buildings. Any one can lay it (roofing kit free.) Slate color—contains no tar, does not crack or run—does not taint rain water—keeps buildings warm and dry—resists fire, water, heat, cold and gases.

Send for Free Samples and name of nearest dealer and investigate for yourself. For two 2c stamps we'll send new book of poultry house plans.

DONOVAN & BURNS

Successors to John H. Boschen & Bro. 246 Fulton St. New York.

dominate with a majority of the young breeders and new advertisers.

And now to tell how to do it. Perhaps I have already stated so much concerning the failures that some of you are becoming impatient, but just hold on a while longer. Be like the witty Irishman who was on the runaway rig. A friend of his shouted, "Jump off Pat, jump off." Pat replied, "Why the devil do I want to jump off; it's all I can do to hang on."

You have ridden so far with me, now just stick until I get through and I think you will admit my arguments are good. And if you proceed along the lines I mention, you will find an improvement in the results of your advertising.

We will say that you have selected your paper. (We will begin at the beginning, just as though you had never advertised.) It's even chances that you have selected one of the best papers. One with a large circulation and lots of good and intelligent writers and readers, regardless of its advertising rate. And if you haven't selected such a paper, you have made a mistake to begin with. An error that will cost you money and set you back just a month in your progress.

By this time you have made up your mind just what you want to sell. And let me say right here, start your advertising a little in advance of the season, providing you have never advertised before. Get acquainted with the readers of the paper selected. Now you plan your advertisement. Here is trouble. You cannot be too careful in the preparation of your copy. Write it twenty times, if necessary. Each time inspect it carefully and ask yourself if it is logical and is it plain and easily understood. To be sure, it is not easy at first to produce well rounded sentences, but a little practice will bring results. Cut out unnecessary words; words that cannot possibly mean anything to your prospective buyers. Say what you mean; mean what you say. Gauge the amount of your words according to your space; that is, providing you have already made up your mind how much space you intend to use. It is better to say what you desire in your ad and use the amount of space required to display it. In contracting for space you agree to take so many inches during the time contracted for. This allows you to use elastic methods in advertising. You can use more space one month than you do another or during the dull season.

I have not made any particular mention regarding classified ads but, nevertheless, they are a very important factor in the makeup of a poultry paper and are certain to bring direct results. They have been the means of convincing many a small beginner that advertising pays and at the same time allows the beginner or small breeder an opportunity to advertise according to his business. They are especially beneficial to the periodical advertiser. He has something to sell or exchange at a certain time and at such times it is good policy to employ the classified or want column ads, even though you have a display ad.

A little further on I intend to give some actual examples of advertisements. There is a marked improvement in the advertisements running in the leading poultry papers today over those of a few years ago. This is partly due to those who have studied out methods of making good ads and those who have learned the necessity for improvement by actual experience at their own expense.

If it is your intention to stay in the poultry business you should engage space

in your favorite paper or papers by the year. Keep before its readers every month and each month have something new to say.

Come to the point at once. Don't crowd your space so full of words that it looks like a dump box of a printing office for old type. A little white space between the headlines and reading matter, also at the bottom and sides, makes your ads stand out good and strong. The building that stands alone in an open space will attract attention quicker than one huddled in among a lot of others. Its outlines will also be remembered longer. A neat rule or border around an ad improves the appearance and I know the A. P. J. is perfectly willing to use them for its advertisers without additional cost.

I have mentioned the fact in this article that it pays to select for advertising purposes a paper with a wide circulation, even though the rate is higher. I do not wish it understood by that that the papers with smaller circulation should not be employed. They should be used and will produce results according to extent of business done. What I intended to convey was simply this: if you cannot command but a certain amount of money to start advertising with, and we will say that amount is about what is needed to cover the expense of a year's advertising in one of the highest priced papers, it is better to concentrate your advertising and confine it to one paper with an extensive list of advertisers and subscribers rather than to divide it up among two or more smaller papers.

I had intended to say something about illustrations and cuts and how to use them in your ads, but will have to postpone that until my next paper, as I am about to the end of my space. However, in the specimen advertising, which will come in subsequent papers, will endeavor to show how and what cuts to use to best advantage. I will also mention at some length something concerning the printed matter that should be used in connection with the poultry business.

W. H. EATON.

Turn the hens together on range if you are through breeding and place the males in large yards with green food, shade, etc., so that each specimen may have its rest and be ready for work next breeding season.

LEE'S

LICE KILLER

strongest and best. No handling, dusting, dipping or greasing. No trouble with vermin if you use Lee's—the name insures quality. Price, qt. 35c; ½ gal. 60c; gal. \$1. Sold by dealers in every state.

GERMOZONE

cures Chicken Cholera, Bowel Complaint, Sore head, Roup—the best chicken medicine. Profits are in healthy chicks. Save the chicks—increase your profits. Germozone will do it. Price 50 cents, postpaid. Send for new poultry book containing calendar and egg record and lots of valuable information.

GEO. H. LEE COMPANY
Box 91 Omaha, Neb.

WHAT MADE THE DIFFERENCE?

Mr. A. was born and raised on a farm, that is, he had stuck to the farm until he was twenty-one, then like many another country boy he had taken his fate in his own hands and gone out into the world to seek his fortune.

This oftentimes fickle dame favored him and he became prosperous, and finally the manager of a large mercantile business. But often in his hot, stuffy city office he smelled in imagination the new mown hay and scented the sweet perfume of clover fields, and promised himself that some time he would return to the country and spend his old age in the open air and perhaps raise poultry or small fruits. The time came sooner than he had anticipated. An unexpected failure left him stranded and almost a financial wreck. Now he would leave the unfriendly crowd and seek the delights of the country once more.

Believing there was "money in poultry" he secured a few acres of land with a small house on it and with his wife in full sympathy they returned to the country to try their fortunes in this new field. The first thing Mr. A. did was to subscribe for two or three poultry journals. From these he studied carefully the most approved methods of feeding and breeding, the different styles of poultry houses, etc. The next step was to build an up-to-date poultry house facing the south with scratching sheds—a wise point—and oiled curtains that could be raised or lowered, according to the weather.

This he proceeded to fill with two of the best breeds of poultry that could be obtained. Everything was now ready and Mr. A. expected to fill his baskets with eggs and his pockets with money while eggs were so high. That was the proper time for hens to lay, but these particular hens evidently thought differently.

Among other things he had not failed to study up all the diseases which were supposed to afflict even the best of hens. Mr. A. carefully watched his flock for "symptoms" which did not fail to appear. As a result a hen hospital was improvised in one corner of the kitchen and as it was seldom without an occupant the good wife demurred, and as the cellar was light and dry Mr. A. set up a stove and removed the hospital to the privacy of the cellar. Here he faithfully treated the different ailments with the most approved remedies. Some rewarded his efforts by living, others became food for the crows.

It was late in the spring before his hens began to lay. Some of them never laid at all, and Mr. A. was forced to the sad conclusion that he had been the victim of the lust for greed on the part of some brother poultryman.

However, by the first of May he had saved a sufficient number of eggs to start the 200 egg incubator which he had placed in his cellar awaiting developments. When these had been brewing a couple of weeks he accidentally left them out too long when cooling and they became chilled, so he had to start all over again. The second batch proved more successful, and in due time a goodly number of little yellow fluffy things were ready for the brooder. It is needless to say that they were carefully watched and tended, but in spite of the best of care and feeding the

majority of them pined away and died.

All this was discouraging, but as Mr. A. was a very persistent man he started out the next year with hopes of redeeming his fortunes. But alas! the second year proved to be very much like the first with some minor variations.

Then Mr. A. lost patience. He would turn the poultry business over to his wife. The business was only fit for women, and he would spend his time in something that paid. Mrs. A. was also raised on a farm, and among her pleasant recollections of childhood days was the caring for and feeding the poultry which wandered at will over her father's broad acres. In those days she had never heard of a sick hen, she did not believe in sick hens, and the little chicks left to the maternal instincts of their natural mothers grew to henhood strong and robust. So Mrs.

A. cheerfully accepted her charge. She fed and watered and cared for her brood very much as her husband had done, only she had omitted the scattering of seed between meals, as she did not think it best to disturb the hens too often. She always talked to them kindly and encouragingly and I really believe they looked forward to seeing her and hearing her voice as much as they did to the dinner which she brought them. Early in December they began to lay and there was no stopping until moulting time.

In the spring a few of the hens were allowed to become mothers, and so faithfully did they fulfill their part that a yardful of strong, healthy chickens were ready for the next winter's laying.

What made the difference?

HOW TO ADVERTISE SUCCESS- FULLY.

The subject of how to advertise in order to bring success is one that the breeder of standard poultry should begin the study of as soon as he decided to embark in this branch of the breeding business. It will only require a limited experience to show that a fair degree of success cannot be attained without judicious advertising, and by adopting a businesslike method of advertising one may be convinced as quickly that success will come by this method.

To the breeder who decides to advertise in order to build up a business and reputation I would like to suggest those things which are absolutely necessary to begin with.

1. Something meritorious to sell.
2. The selection of a medium which is read by those who wish to buy what he has to sell.

3. A determination to give away to every customer the worth of his money.

While there are many other suggestions to be made looking towards the successful advertisement of the product of a breeder's skill there are the first and leading principles to be considered. A man may if he selects a good advertising medium and makes his advertisements read right create a good trade without having meritorious birds to send out to his customers, but there will be nothing enduring to such a trade; new customers will have to be secured each year and it is only a question of time when he will find himself without trade enough to pay his advertising bills.

Let it be understood to begin with then that a breeder must have meritorious stock to supply the demand which will be created by the right kind of advertising. The next question is a selection of a medium to tell possible customers what you have to offer. To the novice a selection from among the various journals devoted to poultry breeding will be somewhat difficult to make. As a rule, however, it will be noticed that the paper that presents the greatest amount of valuable reading to its readers carries the largest amount of advertising and a paper selected for an advertising medium by this standard usually proves satisfactory to the advertisers.

There are, of course, conditions to be taken into consideration which would have a bearing on the selection of a medium which might make it unwise to select one most fully answering the test mentioned. For instance a most valuable paper might have its circulation restricted to a part of the country from which a breeder located on the other side of the continent could expect to get but little trade. This condition will not be met with often, but it is not an impossible one. Here again the breeder must base his judgment on the indications presented in the reading and advertising columns of the paper. If it has a large general circulation over a wide stretch of territory that fact will be denoted by the character of the reading matter and the addresses of the advertisers.

After one becomes convinced that a certain paper or papers reach the people whose attention he wishes to attract will come the questions regarding space to be occupied, wording of the advertisements and whether or not to adver-

tise continuously or at intervals. The consideration of space to be occupied is easy to decide. Use as much as is necessary to say what you wish without being obliged to crowd it and enlarge it as fast as an increasing trade will justify.

The wording of an advertisement is a more difficult subject to deal with. As a rule it is safe to say what you wish in as few words as possible, so that they may be displayed to the very best advantage. Do not deal in generalities when constructing an advertisement. Tell what you have got as plainly as possible. If your stock has won prizes for you say so, and if you are perfectly certain that you can furnish prize-winners to others say that also. It is a good thing to change the wording of an advertisement often, and a study of your medium and the inquiries received from it will assist in its reconstruction.

I am a firm believer in continuous advertising. An advertisement becomes effective in the highest degree only after it has become a part, so to speak, of the paper selected by the breeder to carry it. His name should become a familiar one to every reader of the paper, so familiar in fact, that when one thought of him it would be to associate his name with the breed or breeds of fowls he advertises.

It is only by continuous advertising that one can attain this result, and the full value of advertising is never secured until that result is attained. By advertising at intervals or spasmodically one may get just enough trade to convince him that advertising is a good

thing, and many men get just that far, failing to see that they are hovering on the outer edge of the road to full success. My own experience has convinced me that a small advertisement kept continuously before the public is much more effective than one many times as large published occasionally.

There is also much to be learned regarding the placing of an advertisement and its embellishment. Nearly all the poultry papers make it possible for an advertiser to get his announcement on a page with reading matter, at least part of the time, and that position will often be found more effective than one elsewhere.

All who have looked over the advertising pages of almost any publication have noticed that some advertisements are set in light-faced type, some have borders around them and some are without. Some advertisers pay no attention to the way in which their matter is set, leaving it all to the compositor, and some make just as much of a study of composition and position as they do to the wording.

I think if one favors heavy-faced type he should be careful to get his advertisements on a page where light-faced type predominates, and if a border is desired the advertisement so enclosed should be placed among advertisements which are not bordered. The idea is to make your advertisement stand out prominent, and with this object in view the surroundings must be considered.

There may be cases in which an illustration may be incorporated in an advertisement with advantage, but as

a rule I think the space can be better utilized by plain words. In this connection it may be well to consider the value of so-called "catch lines" in an advertisement. As an effective line to catch the attention of readers of the poultry papers I have never found anything quite so good as the name of the breed being advertised. The average intending buyer of stock or eggs knows what breed and variety he wants and in looking over the advertisement he is attracted only to those having that breed and variety prominently displayed.

While it is well for a breeder to get his name identified with the breed or breeds he is advertising it is not good policy to make his own name in his advertisement more prominent than the name representing the breed he wishes to call attention to. A buyer does not look for the names of individuals when he peruses the advertising pages of a paper, but for the names of the breed or variety he wishes to invest his money in.

Too many advertisers think that when they have forwarded the copy for their advertisements to the editor of the paper that they have done their duty and hold the paper responsible for the success or failure resulting. This is entirely wrong. A paper can present to its thousands of readers an advertisement and secure for the advertiser inquiries, but there the work of the breeder begins. An inquiry does not necessarily mean a sale, in fact if not answered promptly and courteously it probably will be barren of results. It is a good advertising medium that will

Cyphers Poultry Supplies and Foods.

Our 1905 Catalogue consists of 228 pages. It contains six special chapters on profitable poultry keeping; more than 450 illustrations including latest portraits of 150 best known authors, judges, fanciers, editors, professors of poultry husbandry and owners and managers of the world's largest, successful poultry plants. Will be sent free, postpaid, to every reader who sends his name and the names and addresses of two acquaintances who keep poultry.

CYPHERS FORCING FOOD

Puts on size, flesh and weight, and produces plumage with a gloss quicker than any other poultry food on the market. It is not a condiment, but a pure food, properly balanced to give the results desired. It contains a large proportion of protein—the most costly nutrient to be found in grains—and is just what has long been needed by fanciers who wish to hasten the growth of plumage and to secure size on their young stock for the fall shows. As its name indicates, it is intended for forcing the growth and fitting young stock for market. It not only adds pounds to the weight of the birds, but adds a cent or two a pound to their value on the market. It makes the birds bigger and better and so greatly increases the profit on a flock, whether intended for market or show.

We grind, mix, sack and seal all our Foods. For the protection of our customers our ready-mixed Poultry Foods are put up in sealed bags, bearing our Trade Mark, each bag being sealed with a lead seal with the word "Cyphers" stamped on one side and the word "Buffalo" on the other. Customers should refuse all bags which do not bear our seal, also those on which the seal has been broken or removed. (ADDRESS NEAREST OFFICE)

\$50 IN CASH PRIZES

...GIVEN BY...

American Poultry Journal Pub. Co.

If you know anything about poultry you may win one of these prizes. We want you to tell our readers briefly what you know about one or more of the following subjects:

The process of molting. Care of the fowls during this period. What to feed and how to feed it. Is delicate color and gloss of plumage affected differently by different foods. If so, how and why? A general treatise on the subject of molting.

The best and most thorough explanation of line-breeding, with a detailed plan for establishing a strain, a clear and concise statement of the principles involved in developing the desired characteristics of the fowl and embodying the results of too close inbreeding.

Preparing birds for the show room. Instructions which will enable the amateur to take advantage of the many little details, which add to show condition. How to feed and care for the birds during their close confinement in show coops.

Instruction to the beginner whose ambition is to get prominently before the public as a fancier and breeder and establish a paying business.

The best method of starting a market poultry plant. The amount of money necessary to purchase stock and the profit to be expected from the outlay suggested. The amount of ground, number and size of buildings required and suggestions in regard to economical and successful management.

How to advertise successfully. Points to be considered in selecting a medium. Conditions affecting an ad and hints on the advantage of continuous advertising.

Has the specialty breeder greater chances of success than the breeder of several varieties, as regards prominence and high prices for stock and eggs? If so, why?

Advice on management of incubators and the advantage of their use even though hens are available for the purpose.

Success with brooders. How to feed and care for the chicks.

Rules to be observed in getting the highest percentage of fertile eggs. Hints on house room, feed, care, selection and mating, as affecting fertility of eggs.

\$25 For the Best Article

\$15 For Second Best Article

\$10 For Third Best Article

For the next five best articles a copy of the New Illustrated Standard of Perfection will be given.

For the next five best articles, one copy of the book, "Why Poultry Pays and How to Make it Pay," will be given.

The list of subjects has been selected with a view to covering a wide range, so that every breeder will find some subject with which he is familiar enough to write upon with a fair chance of winning. THE CONTEST CLOSES OCTOBER 1, 1905. All copy must be in our hands not later than this date. The articles must be original and not have been published before. They must contain not less than 1,800 nor more than 2,500 words. **The writer who covers his subject most thoroughly and presents it in the most comprehensive manner will be given first prize.** We reserve the right to retain all articles sent in and to publish them, if we so desire, giving full credit to the writers.

These prizes are worth trying for. You can lose nothing but a little time and you may be one of the winners.

Prepare an article at once and send it in. Address

AMERICAN POULTRY JOURNAL PUB. CO.
325 Dearborn St., Chicago, Ill.

bring inquiries from prospective buyers, and it remains for the advertiser to convince the inquirers that he has the class of stock wanted and at prices which will make it a good bargain to the buyer.

After an advertiser, by placing his advertisements in the right kind of medium persistently and intelligently gets inquiries and later on customers he will only secure temporary success unless he deals frankly and honestly with those who are attracted to him. A dissatisfied customer may do much to destroy the work of the most intelligent advertiser, and the breeder who is forced to depend on new customers each year will find advertising an expensive and uphill road to travel. On the other hand each satisfied customer makes advertising less expensive and more certain of success.

Contrary to the opinion of many novices advertising is not, as a rule, productive of immediate results. The readers of the papers do not rush to buy of a new advertiser, but wait until they get better acquainted with his announcements. Any one can be convinced of the truth of this by letting his mind run back over his own experience. Is it not a fact that when wishing to buy stock or eggs you wrote to advertisers whose announcements had been familiar to you for some time. This is exactly the way other intending buyers feel, and until your name and reputation become somewhat familiar to the readers of the papers you will get but a small share of the patronage bestowed, as compared with the amount extended to the better known advertisers.

This condition, however, need frighten no one, for all the successful breeders have had to face it, and it was due to their taking the right view of it that enabled them to attain success. It should not be concluded from what I have said that the new advertiser will get no patronage, for he will if he places his advertising in the right paper, words it so as to attract attention and can follow up his inquiries with letters that will convince the inquirers of the merit of his stock.

An advertisement in a good medium has been fittingly compared with a sum of money placed in a savings bank, in that the longer it remains the more is its earning capacity, and if one sees that it is worded rightly, placed in a good position and that it never makes any promises which cannot be fulfilled the comparison is a very good one indeed.

To sum the whole matter up it may be said that in order to advertise successfully one must have what a considerable number of people want, then those must be reached through the columns of the papers they read by persistently keeping the merits of your stock before them, and finally by giving every purchaser full value for his money. If these conditions are complied with and the breeder profits by the experience gained with the lengthening of his career as an advertiser his ultimate success will be assured.

Alden, N. Y. HENRY L. ALLEN.

If you are so situated as to have plenty of shade for the chicks, you are fortunate; if not, better provide some. Can't raise nice chicks if you allow the sun to blister the plumage.

FATTENING FOWLS.

The good prices to be obtained for fine table fowls should tempt poultry keepers who have plenty of space to give some attention to this branch of poultry culture. In some districts, fattening is carried on by special "fatters" who buy up the chickens in their neighborhood and confine them to a regular diet. But in many other parts there are no professional "fatters" and the chickens are sent to market by the farmers and others who rear them without any preliminary preparation in the matter of feeding. Those who have eaten fowls that have been fattened have generally found them superior to those that have gone through no preparation. It will be remembered that the term "fatted" does not mean that the fowl is to be loaded with fat; only, that the quality of the flesh is to be improved and made tender and that the quantity of meat is to be increased.

The splendid specimens that are to be seen in the table poultry section of the Boston and other shows are strong evidence of the improvement that can be wrought by clever feeding. The weight per pair of some dead chickens exceeds twenty pounds and this will give an idea of what can be produced with care and skill. There are so many breeds of fowls suitable for the table that there is no excuse for the miserable little chickens still so often seen, which will not lay on flesh, however well they may be fed. There is no better fowl for eating than a cross between the Dorking and the Indian Game, bred from the Dorking cock and Indian Game hen, or from the sexes reversed. The Langshan, too, is an excellent bird, with a quantity of meat.

To fatten fowls, they are confined in coops or pens and fed at regular periods on a fixed diet. When first shut up they are fasted for about twelve hours, to give them an appetite for the new treatment. They are fed three times a day at stated times. The food usually consists of soft meal, corn meal, pea meal, barley meal or ground oats. This is mixed to a thin state with skim milk and given in a wooden trough, fastened to the front of the coop or pen. At the end of about a week the food is made thicker; some beef or mutton fat is added, the quantity of which is gradually increased. No water is required and grain is not necessary, though some fatters give boiled barley for the last feed in the day. Some flint grit is provided and some boiled nettles two or three times a week. The food must never be given when stale or sour. If a bird appears not to thrive during the process, it should be turned out in an open run without food for twenty-four hours and then replaced in the coop and tried again.

Some chickens fatten much more easily than others, but about three weeks is the usual time for the treatment to continue, before they are ready for the table. After a chicken is fattened it will not remain in the same state but will go off and become out of health if the same diet is persisted in. It is therefore necessary to calculate the time, if the birds are required for eating at any particular date. No amount of feeding will make an old fowl tender; skillful cooking can alone do this. A cockerel that has been allowed to run with hens will as a rule prove tough and hard.

A. V. MEERSCH.

Poughkeepsie, N. Y.

White Wyandottes and Pekin Ducks

Greatest competition White Wyandottes and Pekin Ducks, winners in the greatest competition in the world: World's Fair champions: 1, 3, 6 and 7 on young Pekin hens; 2, 3 and 7 young drakes, 3, 5 old drakes and 4 old heu. Won 6th and special on cock in White Wyandottes, and I have the best in the world in my breeding pens for 1905. 1st cock, 3d cockerel, 1, 2 and 4 pullets and eight more pullets, sisters to the prize winners and a brother to the 3d prize cockerel.

Illinois State Fair, 1st, 2d and 3d on Pekin Ducks. No White Wyandottes were shown. St. Louis Fanciers Association, Dec. 1903, won 1st breeding pen, 1st pullet and 3d cock in White Wyandottes and special for best pullet. Chicago National Fanciers' and Breeders Association, 1905, won 1, 4 pullets, 1, 5 hen, 1, 3d chl., 2, 5 cock and three specials for best shape, and silver cup for the whitest bird in the show room on White Wyandottes. Pekin Ducks 1, 2 cock, 1, 2 hen, 1, 2 cockerel, 1, 2 pullet. White Wyandotte eggs \$3 for 15, \$5 for 30. Pekin Duck eggs \$2 for 11, \$3.50 for 22, \$7 for 50.

THEO. AMBROSIOUS

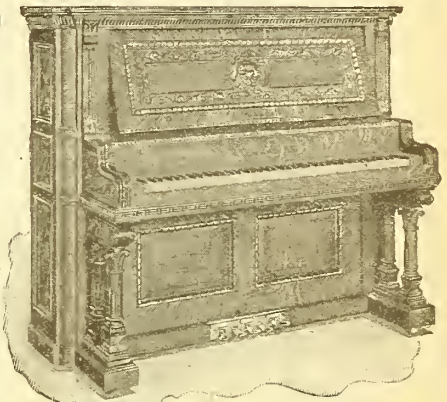

Collinsville, Illinois

WING PIANOS

Are Sold Direct From the Factory, and in No Other Way

You Save from \$75 to \$200

When you buy a Wing Piano, you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many still do—at retail—you pay the retail dealer's store rent and other expenses. You pay his profit and the commission or salary of the agents or salesmen he employs—all these on top of what the dealer himself has to pay to the manufacturer. The retail profit on a piano is from \$75 to \$200. Isn't this worth saving?

SENT ON TRIAL

Anywhere We Pay Freight No Money in Advance

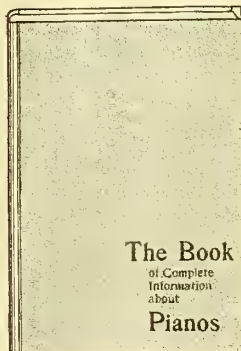

We will place a Wing Piano in any home in the United States on trial, without asking for any advance payment or deposit. We pay the freight and all other charges in advance. There is nothing to be paid either before the piano is sent or when it is received. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing, and are under no more obligation to keep the piano than if you were examining it at our factory. There can be absolutely no risk or expense to you.

Do not imagine that it is impossible for us to do as we say. Our system is so perfect that we can without any trouble deliver a piano in the smallest town in any part of the United States just as easily as we can in New York City, and with absolutely no trouble or annoyance to you, and without anything being paid in advance or on arrival either for freight or any other expense. We take old pianos and organs in exchange. A guarantee for 12 years against any defect in tone, action, workmanship or material is given with every Wing Piano.

Small, Easy Monthly Payments

In 37 years over 40,000 Wing Pianos have been manufactured and sold. They are recommended by seven governors of States, by musical colleges and schools, by prominent orchestra leaders, music teachers and musicians. Thousands of these pianos are in your own State, some of them undoubtedly in your very neighborhood. Our catalogue contains names and addresses.

Mandolin, Guitar, Harp, Zither, Banjo—The tones of any or all of these instruments may be reproduced perfectly by an ordinary player on the piano by means of our Instrumental Attachment. This improvement is patented by us and cannot be had in any other piano. WING ORGANS are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

The Book of Complete Information about Pianos

You Need This Book

If You Intend to Buy a Piano—No Matter What Make

A book—not a catalogue—that gives you all the information possessed by experts. It tells about the different materials used in the different parts of a piano; the way the different parts are put together, what causes pianos to get out of order and in fact is a complete encyclopedia. It makes the selection of a piano easy. If read carefully, it will make you a judge of tone, action, workmanship and finish. It tells you how to test a piano and how to tell good from bad. It is absolutely the only book of its kind ever published. It contains 156 large pages and hundreds of illustrations, all devoted to piano construction. Its name is "The Book of Complete Information about Pianos." We send it free to anyone wishing to buy a piano. All you have to do is to send us your name and address.

PREPARING FOR THE SHOW ROOM.

Let it be understood in the beginning that all the skill and knowledge of those of experience in the art of fitting birds for the show room cannot transform a second rate specimen into a prize winner. Neither can a bird of royal pedigree, standard weight and fashionable markings win unless in the pink of condition. Hence the successful fanciers of today, throughout poultrydom, are those who raise the very best birds and show them in the best possible condition.

Competition in the modern show room is so keen, and the work of the breeder in producing high scoring specimens so far in advance of what it was twenty, or even ten years ago, that a bird, to win, must necessarily be shown in perfect form and must have been hatched well from vigorous, healthy ancestors of highest quality, and from chickhood up to the show room should have the closest care and the benefit of proper feed, range and attention.

I do not say this to discourage the fancier of limited experience who exhibits his birds for the first time. On the contrary, he is the fellow I want to assist, and I urge him, no matter how ever good or bad your birds may be, show them in their best possible form in order to learn from your score card what their merits and defects may be.

The word "condition," as defined by the American Standard of Perfection, has a broad meaning, and in its direct application to a fowl, means health, cleanliness and beauty of plumage. These qualities cannot be given to a bird in a day or a week, but are the result of good breeding, proper feeding, shade, fresh, clean water, clean, dry, well ventilated quarters and good range during the early period of growth. Six weeks before the opening of the show season, select from your flock a number of the largest, most shapely and best marked birds, which should be placed in large yards with shade and grass run, if possible—(cockerels in separate yards from pullets). The roosting house should be kept scrupulously clean by use of lime disinfectants and insecticide. Examine birds closely and if infested with mites or lice, get rid of them at once by insect powder, or some standard remedy. The perches in the house should not be over twelve inches high and should be removable. In the yard keep clean, fresh water that should be renewed several times daily during the warm weather. In good sized shallow boxes grit, charcoal and crushed shell should be kept. Now comes the question of feed that will insure health, growth and bring out the plumage in clear, clean colors. Gradually work the birds onto a ration that is well balanced, and one that contains the greatest possible variety of food that a bird will eat, and feed plentifully. I have never yet found that I was feeding young growing stock too much. They may tire of one kind of feed and perhaps leave it untouched. This is not due to the birds not being hungry—on the contrary, they may eat freely of some other food, if given it. Hence, the necessity of variety. I feed sound grain, principally wheat, milk, cabbage and, at noon daily, a mash composed of two parts bran and two parts corn meal and one part

ground beef scraps mixed with milk. The evening feed is wheat, corn or sunflower seed, and of the latter I think highly, as they exert a most beneficial effect on the growth of feathers. Bear in mind that in following this plan, I am feeding for condition. Condition that means health, cleanliness and beautiful plumage. I want no pale combs and shanks, dull colors in plumage and slender, meager necks. The birds must have the essential elements in food to make bone and feathers, as well as flesh, and this ration gives me better results than anything I have ever tried. The ground beef scraps is twice the quantity some of our best breeders recommend, but 20 per cent animal feed in the mash does better for me than 10 per cent. Milk is objected to by some, but I have yet to find it harmful. I substitute when I can, cut bone instead of the beef scraps, but cannot say it is any better, and only do so for the sake of variety. The same may be said of oats and other grains. They are good, but no better than wheat. My method is not a model one for feeding. The birds are never without feed, contrary to the rule practiced by many breeders of feeding just what will quickly be eaten up clean, but it gives me good results, both in the show room and in the breeding pen, after the show season closes.

Follow this plan of yarding and feeding up to a week before the time for shipment to first show. Weigh your birds often and look them over each night to see that they have full crops and then begin the final work of preparation for the exhibition.

If you have kept everything perfectly clean, and your yard has been shaded, it will not be necessary to wash your birds unless they are of some white breed, and positively not then unless the atmosphere of your premises is filled with dust and coal smoke. But if your birds are not clean, snow white breed, and possibly not then better half and wash them. Use castile soap and warm water, making a thick lather which should be applied freely, but gently, to all feathered sections of the fowl. Spend some time in this and work the lather profusely into the feathers to the skin. When thoroughly "lathered," hold birds by feet and head and draw through a tub of warm water (not hot) repeatedly, until feathers are free from all soapy matter. Then fill the tub again with warm water and rinse thoroughly. Ask your wife to prepare the third tub as she would in bluing the white garments of the weekly wash, and in this "blue" water give the bird its final bath. Place the bird (after pressing out all the water you can with your hands) in a slatted coop with open side to a warm stove and keep there for several hours. The bottom of coop should be covered with an inch of shavings, sawdust or fine cut straw. Don't let the bird get too warm, neither should it get chilled, and after being partially dry, if the day be warm, put coop where bird may be in the sunshine. Be careful to keep bird out of drafts while wet, for colds are easily contracted during the washing process. This plan works wonders with a dirty bird, but to my mind the whiteness is not as pure and attractive as that of a bird that is of the "stay white" kind, and that has had the ben-

eft of clean quarters and environments that are conducive to "stay whiteness."

Now that your bird is washed, dried and clean, place him in an exhibition coop. Set coop under shelter, but in the light. Water and feed as usual and invite your friends to see him. If he is disposed to rebel at his limited quarters and get frightened at the approach of strangers, you will find it necessary to spend some time in getting him trained to stand naturally, and to become accustomed to visitors. My plan with a wild bird is to feed sparingly but often, and all visitors who come, as well as different members of the family, approach him with some dainty bit of food of which he is fond. Two or three days of such treatment generally overcomes all disposition to shyness and the birds gets to enjoy the attention of visitors. In such cases care should be taken to feed freely at night all the bird will eat.

It is most important that your birds get this training, for without it the confinement in new coops, the noise of the show room and the attention of the show patrons will frighten them until they stand awkwardly, out of shape, and present anything but a high-bred appearance, and when in the judges' hands cannot receive its just score for shape. The day before shipping take your bird from the coop for a final inspection and the freshening touches. Look carefully for broken feathers, which should be removed. Then wash legs, feet and toes with warm water and a soft brush. If lines between scales on legs are filled with dust, remove with toothpick, but avoid scratching. Dry with cloth and **dry thoroughly**. Then apply with finger a small amount of vaseline or sweet oil, and spend some time in rubbing or polishing with flannel cloth until the bright natural color of feet and legs is brought out.

Wash next the face, wattles, beak and comb. Rub comb very gently, else it will present a raw appearance. Apply to it a little sweet oil and it will look bright, clean and of fine texture. Go over the entire body of the bird with a flannel cloth to remove dust. They are now as fit as you can make them. Feed, water and ship in all wood light shipping coops, with solid sides but slatted tops. Straw, chaff or sawdust should cover bottom of coop, and do not crowd the birds in shipping, else you may have wry tails and broken feathers. Neither should you place large and small birds in same coop, or birds that are strangers to each other. Coop together only those that have been raised together, and only show in the show room birds of agreeable dispositions in same exhibition coop. Where two or more are cooped together, one may be the controlling spirit, and dominate the others into a dejected, crestfallen, "hen-pecked" appearance.

Arriving at the show rooms, take birds from coop, and never catch a bird by legs in taking from coop. Carefully but firmly grasp it by the wing joint next to the body and draw it out head first. Look them over carefully to remove the dust of travel. Give comb, feet and legs a careful cleaning. Water and feed lightly and trust them to the mercy and wisdom of the poultry judge.

Do not feed too heavily until the judging is over, as an overfed specimen looks dull, sluggish and is lacking in that bright, active, snappy appearance that pleases a judge. Throughout the continuance of the show, water carefully, but feed only moderately, and of as great variety as you can get. At night, if the light burns all night, drop a curtain or newspaper over front of coop to exclude light.

Now a bit of experience in the matter of weight. "Won on weight" is a proverb of the show room, and Judge I. K. Felch says "you are beaten before the show opens if your entries are below weight."

Last winter I was fitting six head of young B. P. Rocks for a show and had them just about the weight limit, when a perfect epidemic of colds ran through the entire flock. The weather was damp, dismal and cloudy and the birds for days refused to eat and lost rapidly in weight. But the colds were treated successfully and with a change to better weather the birds improved and appetites returned. Corn, boiled milk, a rich mash and raw beef was fairly crowded down them. Pepsin and charcoal tablets were given them to prevent indigestion and bowel trouble. At the time of shipment they had made a decided gain, but were still below weight. Their ride of two hundred miles did them no harm, and in the morning of the opening show they were lively and hungry. They were given all the water they would drink, then mica grit was given, followed by corn, which they ate greedily. Their crops seemed full, but when a pound of raw beef, cut fine, was given them they ate it with a relish. This was heroic treatment but was justifiable, for a half hour later, when the clerk weighed them, the wisdom of such feeding was apparent. Four of the six went good full weight; one pullet was a quarter of a pound overweight and the cockerel almost a half pound. True, the cocks looked unshapely, but as the judge did not reach them for several hours after the weighing, the work of digestion reduced the crops and the birds seemed bright and lively. One pullet scored 94, another 93 and the whole lot went above 91.

Now as to after results. I write this for the benefit of certain people who persist in the statement that "show birds are pampered and do not make good breeders." The cockerel above mentioned went direct from the show room to the breeding yard and was mated to eight hens. Eggs from this hen hatched splendidly—the chicks were as healthy and strong as I ever raised—some of them now five months old are very promising candidates for blue ribbons. The 94 point pullet was mated to her sire and is the dam of an even dozen beautiful pullets that will equal, and some of them may exceed, her score. The entire lot is alive, healthy and have been good breeders.

In conclusion, a word in regard to the treatment of old stock. When the breeding season is over the entire lot is turned out and given free farm range. Their feed is somewhat reduced to induce "worm hunting" and "bug chasing." This exercise and reduction of grain feed brings about a decrease of flesh, but an increase of health. About August 1 they are put on a good feed, principally corn and sunflower seed. This puts on flesh rapidly, the old feathers drop out and a new dress of bright, strong colors come on quickly. During the month they are kept in the shade as

much as possible, for the hot August sun of this climate is damaging to the right colors of new feathers. Feed plenty of charcoal, but no milk, and only about one-half the animal food given to young, growing stock. The legs of old stock intended for the show room should be treated occasionally with a lotion of two parts kerosene, three parts lard, to which add a few drops carbolic acid. This keeps the legs smooth and clean. Otherwise treat old stock as you would young birds.

To recapitulate: Observe absolute cleanliness in feeding, yarding, cooping and housing, and handle your exhibition stock often until they feel at home in a coop before a crowd of admiring strangers. The secret of the whole matter, if there be any secrets in the matter, is to get your birds to present to the judge the shapely carriage you see so often in the yard. T. J. ROUNTREE.

A GOOD TIME TO BUY BREEDING STOCK.

Year-Old Hens Make the Best Breeders
—Stock Is Cheapest in Summer and Fall—Some Experiences of a Buyer and Seller of Stock.

Every poultry breeder is confronted at this season with the problem of handling the old stock in such manner that it shall keep up to its good condition and at the same time have the youngsters kept growing so they shall be in the best possible shape for the fall fairs and winter shows. How to meet these two pressing problems is an important question, and upon the wise answer to the question depends much of his good success with customers.

We have found in our experience that it is better to offer special inducements to early buyers to the end that the year-olds be moved off out of the way of the youngsters, hence have come to think it wise to advertise the year-old stock we have been breeding from at reduced prices during the summer, gaining thereby the advantages of more room for the youngsters and at the same time giving customers decided bargains. It is our experience that customers appreciate these special bargains, and we frequently receive letters asking when we will commence disposing of our breeders, the writers saying they want to take advantage of summer prices.

As buyers of stock to furnish new blood to our yards we frequently take advantage of the special opportunities there are in summer, and have found it decidedly to our advantage to buy them. It is well known that the strongest and best chickens are hatched from eggs from year-old hens, or hens that are at full maturity, and by mating such hens with early hatched and well-matured cockerels we get the best results in strength and vigor of the chicks. Mating an old cock with pullets gives good results, but less good, we think, than the mating of mature hens with good, vigorous cockerels; hence we advise buyers to secure their next year's breeding hens at an early date and get them well accustomed to their new home and conditions before winter; by doing so they start the season with decided advantages gained, and will find their reward in the stronger and better chickens they will get.

Because of their desire to close out most of this year's breeding stock before fall many breeders make it for the advantage of the buyers to order now by offering better birds at a set price, thus giving better value for the amount the buyer can afford to spend, or offering the birds at as much as 50 cents to \$1 a piece less than the price will be a few months later. There is a decided saving in buying stock now.

BUYERS SHOULD DESCRIBE WHAT THEY WANT.

We find in our own experience, and other poultrymen have told us they have the same difficulty, that prospective buyers do not state what they want; that is, they do not give the breeder an adequate idea of the quality of stock they think of buying. Two men will write that they want to buy a good cockerel, "kindly write description and price." Perhaps one wants simply a good breeding male, and would be well pleased with such a bird as we can sell him for \$3; the other

party, who writes in exactly the same way, wants a bird worth \$25 or even \$50, and is perfectly willing to pay the price, provided he gets the bird he wants.

How does the breeder know how to price stock to such inquirers? We may have 500 or 600 or 1,000 cockerels, worth from \$3 to \$25 (or more) a piece! surely if the intending buyer will give us an idea of how valuable a bird he wants we can please him. It is impossible for us to describe a large number of birds and give a good idea of each one, with a complete range of prices; if we could do so it would likely be confusing to the buyer. We cannot but feel, then, that if the intending buyer will give us an idea of about what priced bird he wants we can better suit him. And it is for our best interest that he be pleased; it is worse for us to have a dissatisfied customer than it is for the customer to be dissatisfied; hence we want to satisfy him every time!

DESCRIBE THE METHOD OF MATING.

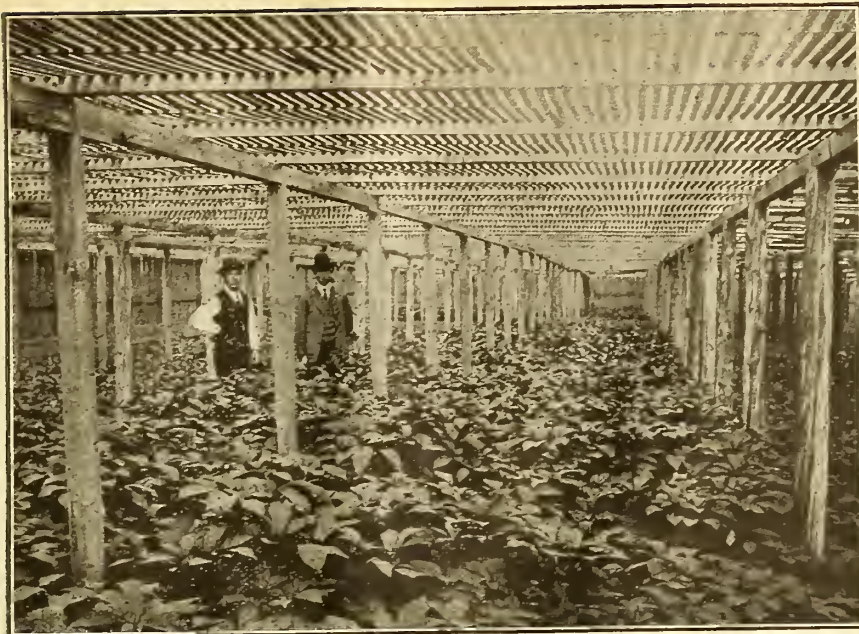

Another matter is the method of mating. Nine out of ten buyers that order Barred Rock male birds do not tell us whether they practice single or double mating, and we do not know whether they want a light bird or a dark one; a bird that will throw a greater number of well-marked pullets, or one that will strengthen the color-points of the cockerels. If they would be careful to tell us as to these matters we could more surely ship them the birds they want. Or if they would tell us what are the weak points in their own stock, the points they are most desirous to strengthen, we could select intelligently and be certain of helping the customer.

The buyer has to trust to the good judgment of the breeder to send him such a bird as he wants; hence it is no more than good business management to tell him, as nearly as possible, what he wants. The intending buyer should not hesitate to write what price he is willing to pay for such a bird as he feels that he wants, and then let the choice rest with the breeder. He can specify that he wants the privilege of returning the bird if not entirely satisfactory, and that, of course, should be his privilege within a reasonable time. A bird should have two or three days' time in which to rest and get back into his good form before the buyer decides as to his shortcomings, and even then it may be wisest to trust to the greater experience of the breeder than to one's own limited knowledge and experience.

The wise breeder is more concerned for the customer's interest than he is for the mere making of a sale. He wants pleased customers above all things; pleased customers are the best advertisement a breeder can have! It is for the customer's interest, then, to take heed to these things, to aid the breeder with the best description of the bird he wants, to the end that the breeder does his best to please him. In other words, the best interest of both breeder and customer are identical, and they should do their best to have all questions fully and clearly understood, then a mutually advantageous and satisfactory trade will be made.

CHAS. F. THOMPSON & Co.
Lynnfield Center, Mass.

Never omit to keep a record of the product of the poultry yards. A showing of what is done there is sure to make converts to poultry keeping.

Our illustration is a reproduction of a photograph taken June 20, 1904, showing the artificial shading arbor of a ginseng garden showing thousands of ginseng plants growing very luxuriantly near Wausau, Wis.

Ginseng is a plant, the root of which is used for medicinal purposes in China and also to some extent in this country. The plant was first discovered in America in 1716 near Montreal, Canada, and later also in the United States in the eastern and middle states. Ever since its discovery it has been gathered and exported to China with good profits to those who engaged in the business. At first only 35 cents per pound was paid for the roots, but today as much as \$7 per pound is being paid for the article.

With the clearing up of the country by the farmer the wild plant has become practically exterminated. The steady demand for the article and great increase in price has caused people of this country to take up the cultivation of ginseng by artificial means, and while at first with discouraging results, it has been recently demonstrated that it can be as easily raised as any of our common garden vegetables and with great profits.

Ginseng yields wonderfully to cultivation and it is also found that the cultivated article brings a much higher price, the plant is hardy and it will stand much more abuse by the inexperienced grower than had at first been anticipated. Frost will not affect it. One thing that it will not yield to, however, is cultivating it in the open. It must be provided with shade, either artificially, as shown by our illustration,

or it may also be planted in the forest under natural shade. Experience, however, has taught that artificial shade is preferable.

Ginseng is raised from seed or young roots transplanted. The latter way of starting a garden leads to much quicker results. If seed is planted, it takes from five to six years to mature a crop of ginseng. Gardens may be started in the spring of the year, but the best time is to start in the fall of the year—September and October—and the ground should be especially prepared some time previous to planting. Complete cultural directions are kept quite a secret by the experienced grower, but are usually furnished to customers with orders of roots and seeds.

The demand for the article seems much greater than the supply and, therefore, prices are steadily increasing. Our latest United States consul's report from China claims it is possible to market \$20,000,000 worth of these roots in China annually.

As to profits that can be expected the following is the result of the first experiment made by the owner of the garden shown in our illustration: Forty-five young roots, weighting $2\frac{1}{2}$ pounds, were planted. After four years of culture the roots were dug up, forty-four in number, one having decayed. The total green weight of the forty-four roots was twelve pounds and five ounces, or an average weight of four and one-half ounces each. After drying the total weight was four pounds and one ounce and were sold at \$10 per pound. The seed produced by these plants during the four years was 8,831, which were sold at from 1 cent to $1\frac{1}{2}$ cents each. The

ground covered by these roots was a bed 3x10 feet. With a little figuring one can easily tell what can be expected from a larger space of ground.

SALT YOUR POULTRY.

Roup is a dreaded disease that attacks the birds of all kinds in fall and spring, that sooner or later affects the whole flock and sometimes develops into canker, blindness, consumption, paralysis and disease from head to foot. Apparently roup may be cured, but if a male bird has it discard him for a breeder. His offspring will surely have symptoms at two weeks old or in a day or so after hatched, making small and poor layers, not paying for trouble and feed, and no matter whether you keep poultry for pleasure or profit, results are what you want. Salt that male, it makes no difference what he cost; get one that is guaranteed never to have had roup, and notice results of his chicks. Don't look for a prize winner and score card only, but a bird of vigorous health and vitality, and good layers will be his offspring.

"Salt that for prosperity."

To keep white birds from turning yellow feed salt in their mash; it will make their feathers white as snow. Dry salt will kill fowls; it must be fed in mash for results in digestion and roup and white feathers. I have lost males at shedding time that would develop some form of roup and hens that were valuable from scored and prize winners would go blind. They would look all right but would starve to death. Now say from years back the male had the roup handed down to him, and the germ was transmitted to all his chicks, when he should have been salted with the hatchet. Farmers become disgusted, and the man says: "Jane, take those chickens to market that are left." So they remain with disease to be consumed. It is a mean practice that could be stopped by salting the male. Have a healthy male in your breeding pen. I never have roup in my fowls now. I learned by close study where it could be prevented. I wanted best results. Sometimes my fowls have colds, but they are salted with a preventive of roup. An ounce of prevention is worth a pound of cure when diseased with roup.

MRS. M. B. WILLIAMS.

Salisbury, Mo.

Remember young chicks grow rapidly, and a brooder that was large enough two weeks ago may be altogether too small now. Crowding will stunt chicks very quickly.

A full egg basket is the same as a full sugar-box and tea-caddy.

Industry in the poultry yard is the true basis of the poultry industry.

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. Stock for sale. Eggs for Hatching \$2.00 per 15, \$3.75 per 30, \$5.00 per 45, \$10.00 per 100. From winners pen \$3.00 per 15, \$5.00 per 30. Illustrated circular free

G. H. SUNDERMAN,

Beardstown, Ill.

POULTRY ON A CITY LOT.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: I have been a subscriber to the AMERICAN POULTRY JOURNAL since September, 1905, and I have gotten many helpful suggestions from its pages, and am writing you in hopes that some of your readers may derive at least some little help from these few lines. Living in the city as I do, I have only room for a few birds. I only keep nine females and two males. I started out last year with prize winning birds, Chas. McClave as judge. I paid a good price for my chickens but have sold eggs at \$1.50 per setting of 13 eggs, with a few chicks hatched last year to more than pay for old birds, and still have the old ones with fifty-one chicks hatched this year. I notice so many complain of unfertile eggs or weak hatched chicks. Last year I had only one male and many unfertile eggs. This year I have two males. I let one male run with the females one week and one the next. The male who is to be confined I do not coop up but have a nice run for him. Out of five settings, fifty-seven eggs in all I got fifty-three strong healthy chicks. Under one hen I put 13 eggs, hatched 13 chicks, another 3 eggs hatched 3 chicks, another 11 eggs hatched 11 chicks, another 15 eggs 14 chicks, another 15 eggs 12 chicks. Have lost only two chicks and that was from drowning. I do all my cleaning and feeding myself, even help to build my coops and instead of finding it a worry and trouble it is a great pleasure. I think I have been very successful in raising my chickens, and I attribute my success entirely to perfect cleanliness and proper attention in every way. I have an incubator, but as I care to raise only a few chicks I prefer the hen to hatch my eggs. For my hens and chicks I have four runs 9x12 feet, surrounded and covered with poultry wire, so am not worried with my neighbors' cats carrying off my chicks. My coops are three feet high, three feet wide and six feet long, so as to give the little chicks room in rainy weather, for I never let them on the ground when it is wet. The floor stands one foot from the ground. The ends and sides of coops are weather-boarded to a little over half and finished over top and ends and sides with poultry wire. I lay tar paper over top at night and in rainy weather but take it off during the day so as the coops can thoroughly air and sun. About three or four days before the hen is to come off with chicks, I mix carbolie acid in white-wash and thoroughly whitewash my coops inside and out and cover the floor with clean, pure straw. I am not troubled with lice on my little chicks; however, I always keep a good lice powder on hand, and always dust the mother hen every week during setting, then again when the chicks are about ten days old. Another thing, I never set my hens where the other chickens can worry them. I have a small room, opening in a run where the setting hens are put. I never feed a setting hen anything but corn, but I always keep the corn and fresh water where they can get it any time they see fit. I do not neglect my old birds. I have their house white-washed once a month, and every two or three days have the floor cleaned and lime sprinkled over same. I think it is a mistaken idea that a chicken cannot be raised for a show room and a good layer combined, as I have heard several

say. I have only one pullet left that hatched late in the season last year (sold the rest I am sorry to say) from one of my prize hens. That pullet has laid from Mar. 18, 1905, to July 5, 1905, eighty eggs. I fed very little damp food; in fact I feed almost entirely dry food with plenty green stuff. Well, I must stop for fear of appearing greedy in taking up so much room, should you think this letter worth publishing. I write this thinking that there are others starting out in the poultry business who, like myself, would like to know how other beginners are doing.

It is a little late for a letter of this nature, I know, but as the old saying goes, "Forewarned, forearmed," so perhaps this will help some one for next hatching season.

MRS. E. L. GIFFORD.

Atlanta, Ga.

OAKWOOD JOTTINGS.

If you see a dead chick, when making your morning rounds, and suspect lice, examine the live ones. After a chick is dead a louse has no further use for it.

Scrape away, for an inch in depth or more, the polluted earth about and within the poultry houses; put it where it will help a crop along and supply its place with unpolluted soil or sand. Few things in poultry sanitation are more important than this.

At least twice a year, plow up the yards in which the hens run. Sow rye in the fall for the hens to pick at in winter and spring. Rape may be sown and corn and sunflower seeds planted after the late spring or early summer plowing. Plant pretty thick and thin out later where the hens haven't spared you the trouble.

Have as few places as possible where you can't get with a plow. You will find the movable fence, where it can be used, a great advantage. Take it down after the breeding season, roll it up, and place it to one side; then run your plow where it stood.

If you have never tried Essex rape for young chicks try it next year. For many weeks it continues to put forth a succession of tender leaves which are much relished by the chicks.

In April and May, it is a good plan to bury in the soil a part of the grain fed to laying hens, especially if the eggs are wanted for hatching. A hen that works for a living is apt to be the mother of healthy chicks.

About this time of the year you are apt to be disgusted by the brood coop. As you go your rounds at night to shut up the coops that all may be safe from fox, mink and weasel you will find the chicks on the grass in front of the coops. Crowded together within they would find it hot. Outside on the rapidly cooling grass they find comfort at least in the fore part of the night. Later a heavy dew may lead to discomfort and colds. Put them in or leave them out, which?

Early in June we put about one hundred incubator hatched White Leghorn chicks into a small building with five hens to care for them. This house, which is in part sided up by poultry netting, so that the air may circulate through it freely, was well cleaned out and its earth floor covered by clean sand. Up to this date the hens have been confined within the greater part of the time while the chicks through the daytime have been at liberty to go in and out. The air in

this building is purity itself compared with that in a small crowded brood coop and we have no other hen brooded chicks that are thriving so well as these. Before this is in type the hens will be removed and later the cockerels. The pullets will occupy this ideal summer residence until cold weather comes.

Do you know that you will have better success with an outside brooder if you put it inside? We put one in a building about nine feet square last year and when the chicks were so well grown that they began to perch upon the brooder it was removed and the more commodious building became their home. In stormy weather when the chicks were young they were permitted to leave the brooder but not the building. On fine days they were allowed to go outside. Our experience with these chicks so pleased us that this year we have brought every outside brooder inside.

ALVAN SMITH.

Marshall, Ill.

DUCKS IN SMALL RUNS.

The increased attention that is bestowed on poultry nowadays has caused ducks to be more in request. That they are to be considered as profitable stock has been proved over and over again by those who have given them a fair trial. In most places the price of duck eggs is higher than that for eggs of ordinary fowls, and as ducks will yield as many eggs in the year as most of the breeds of poultry that are celebrated for their productiveness, it is only

where they are badly managed that a good profit is not returned. They will do well even in small yards, provided young birds are kept, fed and managed judiciously. In a back yard in a populous neighborhood ducks, though they do not crow, like the much abused roosters are apt to make a good deal of noise prior to feeding time; but with this exception, they are in no way troublesome.

It is not advisable to keep ducks in the same enclosure with other fowls, as is sometimes attempted, as they have an unpleasant habit of dabbling their beaks in all the water they can find, making it muddy and dirty, as well as causing the ground to be damp and sloppy, and they frequently seriously ill-treat the hens. Half a dozen ducks can be comfortably lodged in a space of twenty feet by five feet. A good-sized washing tub will make an excellent pond, the water in which should be changed two or three times a week and the birds will remain fairly clean. A small house, ventilated at the top, the floor covered with dry straw, often changed, and on which the ducks will sleep of a night, will complete all necessities. The wire round the enclosure need not be more than three feet high, as the birds will not be likely to fly. They must be shut up in the house during the night, otherwise they will probably lay in the water or anywhere about the run, where the eggs may get broken.

Young ducks will lay better than old

ones, and will, under proper conditions, lay at a time of the year when eggs are most valuable. The stock should, therefore, consist of ducks, hatched about March, and not more than eighteen months old. They must not be overfed. In the summer they should have oats or wheat given them in water, morning and evening, just as much as they will eat eagerly. Some sand or grit should always be thrown into the water in which the grain is placed. They must have plenty of green food, cut grass or chopped cabbage or lettuce leaves, but do not allow it to lie about the run and rot. In October, when the nights and early mornings are beginning to get cold, the feed of grain for breakfast should be stopped and meal and middlings mixed stiffly with hot water be given instead.

As regards breeds of ducks to keep the Pekin will perhaps be found to have no superior, although white ducks in a small run are usually dirty looking. The Rouen is a handsome duck, but does not lay as well as some breeds crossed with the Aylesbury especially if the drake is a Rouen. The young birds will be mostly dark; and these make excellent ducks for confinement. A duck that suits well is the Cayuga, a large black duck that is very hardy and lays a great number of eggs.

A. V. MEERSCH.

Poughkeepsie, N. Y.

Keep cool, fresh water within reach of the chicks at all times.

\$1.50 and What it Will Do

ORDER NOW

The New Standard of Perfection, which will soon be issued by American Poultry Association, is in such demand that the sooner you get your order in the better chance you stand of getting one of the first editions. The Standard is a necessity to every poultryman. It is the authority which judges go by at the poultry shows. It describes every standard variety, giving the correct shape, size, color, etc., that a perfect bird should be. With a copy of this book you can judge your own fowls. It enables you to know your best birds, which to take to shows, which to mate for best results. The book will contain over 300 pages with nearly 100 illustrations. The price of it made by the American Poultry Association is \$1.50.

But the Special Offers of

American Poultry Journal

Help you get the New Standard cheaper

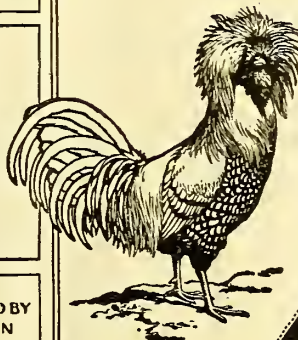

- 1.—Send us One New Subscription to the American Poultry Journal at its regular price of 50 cents a year and we will let you have **The New Standard for \$1** instead of \$1.50.

OXYGEN—AN EXPERIMENT.

Some years ago, when I was much younger and considerably greener than I am now, I began to keep chickens and found that I had in the fall and winter a large number of sick birds on my hands. Like any greenhorn I began to buy medicines and to give my flock all the doses in the catalogue. I got to be quite an expert at the business of drugs and my hands were full all the time. The "very old boy" seemed to be in the flock. It was snuffle and rattle all night long. Swelled heads, watery eyes, gurgling throats and white patched mouths kept me busy all the time.

Later, I got wise and used the hatchet. That reduced my drug bill and incidentally reduced my flock.

The following season I "pitched physics to the dogs," as the poet says, and confined myself to peroxide of hydrogen and listerine. (And my old friend the hatchet.) If the peroxide and listerine did not fetch them, the hatchet did.

Not very long after that I began to get wise. I made up my mind that what birds needed was fresh air—oxygen, in short—and I determined that those birds should keep well or die on their roosts frozen stiff. During the fall I kept the windows open at night. Of course I had it arranged that there should be no draft on them, but the fresh air was there in wholesome abundance all right every night. In the early winter, I closed the windows at night, but I had cracks in the house so that one could stick a knife blade through. When it got decidedly cold, I put up burlap curtains in front of the roosts (which were close to the low roof), but I did not close the cracks. During January and February I doubled the burlap curtains, but left the cracks as before. The water in the fountains froze solid every night. A few of the birds had their combs nipped.

But how about the roup and snuffles and beery eyes and rattling throats? Nary a one! Birds in fighting trim all the while and never a sick one. I made this valuable discovery three years ago and have pursued this policy ever since. Have forgotten what roup looks like.

How do I explain it? Simply because oxygen is the life giving constituent of the air and that all animals must have oxygen in abundance; and, when they have it in sufficient quantity they are bound to flourish, other things being equal. The "other things" are sunlight and constitution. Sunlight is easily obtained and constitution is the result of reasonable care and a rigorous elimination of weak and feeble ones.

Experience has taught me that sunlight is very beneficial to fowls in winter. In my coops I always arrange that the low winter sun shall sweep the entire floor and the roosting places every sunny day. This is the best germ-destroyer known. At the same time it imparts vitality to the fowls to be able to sit in the sun.

It is said that the ablest scientist is unable to explain scientifically just how a plant grows—what there is in the sunlight that produces growth. The same applies to the growth of animals. But there is absolutely no question that the two prime necessities for growth in

both the animal and vegetable kingdoms are sunlight and oxygen.

These are very simple things and everybody knows them; yet I will venture the assertion that not one fancier out of ten (professionals excepted), fully appreciates the value of fresh air and sunshine in poultry keeping. It cost me a good deal to learn these simple elementary facts, and I guess the rest of us that really know, have had similar experience. There are lots of us that don't know it yet. Hence this article.

E. L. C. MORSE.

THE NECESSITY OF GOOD READING.

Why is it that so many poultry fanciers try to succeed in the poultry business without the aid of a good poultry paper? I now can see why so many of them have their "ups and downs." There is no excuse for any one of them, that is for those who do not have their names on the subscription roll in the office of some reliable publishing house such as the American Poultry Journal Publishing Co., who without a doubt has the finest poultry journal that ever left the press. It is the cheapest for the size, having 100 pages filled with nature's subjects, written by honest, reliable and educated men who have succeeded in the poultry world and now stand the highest among men of their class.

The paper is now celebrating its thirty-fifth anniversary. Just think of it! Thirty-five years, so you can see that they have gained the popularity of the people, who have succeeded by its aid.

There is a vast multitude of poultry fanciers upon this globe which will try to make this occupation the "greatest of ages," with the aid of a good poultry paper.

There are schools of poultry culture, specialty clubs, etc., which every man and woman interested should take a course in or join the specialty club—that is, those who have not attained the highest mark.

There are also poultry books, hundreds of them, written by educated authors who have obtained their education through the schools and specialty clubs and reading good poultry papers. Being a great fancier of poultry and agent for the American Poultry Journal on some of my routes, I will ask him how he succeeded with his poultry last year. He says: "Don't mention chickens to me! I had the worst kind of success last year. Last fall my fowls got to sneezing, had swelled hears and would soon die."

"Where did they roost?"

"Out on trees and on the spring house and here and there."

Then I asked him what poultry journal he takes and he says "None." Well my goodness, friend, here is a chance of a lifetime. Let me take your name down for a subscription to the American Poultry Journal for 1, 2 or 3 years, which will put an end to your bad luck and which will help you to procure a profitable flock of chickens." "Well, I'll take it for three years at that price, for I wish to succeed." So I pass by and come to the next farm house, meet Mr. Farmer in the best of humor.

"Well, my friend, how is the poultry?"

"Fine and frisky."
 "Mr. Friend, do you take any poultry papers?"
 "To be sure."
 "Did you ever take the American Poultry Journal?"
 "No, I never did."
 "Well, then you had better subscribe now and succeed more and more with your fine flock of fowls."
 "Well, I'll take it for one year. I'll never miss the money."
 So any one can see just why it is there are so many failures. If we wish to make the new year a hummer we had better all subscribe for the American Poultry Journal.
 J. A. Moore.
 Dawson, Pa.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—In reply to your favor of June 2, 1905, we beg leave to report we breed only Single Comb White Minorcas, and use incubators exclusively for hatching.

Some of the eggs used were purchased at \$5 per setting, from which in three settings we got three puny chicks.

Total number of eggs used were 1240 in 4 hatches, and total number of healthy chicks hatched were 540.

On March 15th we put 180 eggs in our incubator and hatched 46 chickens. Our second hatch commenced April 6 with 353 eggs, from which 166 chicks were obtained. The third hatch was put in the incubator April 29th, from which we got 169 chicks. The fourth hatch commenced May 30th and 160 chicks were hatched out June 20th.

Most of the first chicks developed weak legs in two weeks and some became so weak that they had to use their wings for locomotion. Half of those died. The other half grew strong and well, as soon as the weather permitted their getting out doors.

Total number of chicks on hand June 20th was 460. Our chicks were unusually strong this season when hatched. No cripples.

We kept about 40 new chicks in each bunch. They were allowed their freedom in closed runs without grass, but were thus protected from our own or our neighbors' cats. By a liberal use of fine meshed wire, they were protected from rats or other vermin. We have not seen any lice. Six chicks were smothered by bunching up in a corner one night.

When one lot of chicks make up their mind to bunch in a corner, it is exceedingly difficult to break them of the habit. To break up this habit we scatter them among the other bunches. Still farther, to prevent their bunching in a corner, we set in each corner a broad triangular board pointed at the upper extremity. The board is a foot wide at the bottom and runs to a point at the top. This board slants up to the corner so as to prevent chicks from getting in behind the corner boards.

We have small coops with long covered runs for our new chicks. In each coop we hang a Suspension Brooder. The little chicks huddle under this brooder as under a mother hen, with their little heads sticking out. For air and convenience our coops and runs are 6 feet high. We take special pains to keep our coops clean and well ventilated and comfortably warm. A portion of their runs are dug up daily for worms and scratching purposes.

We use chaff or dust for litter while the chicks are small. In this litter we

scatter their feed.

They are fed in the litter Gibson's natural chick feed, mixed with an equal quantity of coarse steel cut oatmeal half and half.

They get twice daily ground beets in little glass cups. Twice a week they get ground meat and bones. Fresh water in clean vessels twice daily. Before them all the time in small glass cups is kept a mixture of equal parts of bran and middlings 1-20th part beef scraps and 1-20th part of chick grit.

Also before them all the time in separate small glass cups, is fine lumps of charcoal, chick grit and fine, hard coal cinders.

S. A. McWILLIAMS, M.D.

RIGHT TO THE POINT.

In the accompanying letter from Judge Finley, which we copy by permission, no

attempt at amplification of the facts regarding the good qualities of Chamberlain's Perfect Chick Feed has been made, its author confining himself to plain statements, but coming from a breeder so widely and favorably known, this short letter should go a long ways in convincing all who have not used Chamberlain's Perfect Feeds of their incomparable merits:

"Office of Eastern Importing & Breeding Co.

"Macon, Mo., April 26, 1905.

"Mr. W. F. Chamberlain, S. Louis, Mo.

"Dear Sir: Please send me my usual order of your Chick Feed by early freight; am most out and might as well be without chicks as without your Feed. Your Perfect Feeds are, sure enough, in a class by themselves. Sincerely yours,
 "R. J. FINLEY, Mngr. and Treas."

Shade for young chicks is very essential this month.

SOME RARE BARGAINS

As we need the room for the thousands of young Wyandottes growing up I will offer at **Bargain Prices** for quick sales some FIVE HUNDRED line-bred selected breeders, high-class exhibition birds and choice utility fowls. To make sure you get the best blood obtainable place your order with

JONES, THE WYANDOTTE MAN

SILVER, GOLDEN and WHITE WYANDOTTES, G. S. and S. S. BANTAMS, winners at all the leading shows of the world, including the bulk of the ribbons at the last Chicago Show. All the birds offered in this sale are line-bred stock and from our breeding pens. Send for my 36-page catalogue and Bargain list, a book worthy a place in any library; handsomely illustrated in colors, mailed on receipt of 4 cents in stamps for mailing.

EGGS FOR HATCHING \$3 per 13, \$5 per 26

Six grand litters of Scotch Collie Puppies, fashionably bred, for sale at reasonable prices, quality considered.

Shows, Associations and Clubs

Secretaries are requested to send us the latest news and announcements for this department.

THE CINCINNATI SHOW.

Secretary Foy Tells Something of What the Management Will Do in the Way of Caring for the Exhibits—Cincinnati Kennel Club Will Hold Show in Connection—The Good Work Already Done by the Association.

Things are moving down in Cincinnati. The officers of the Cincinnati Poultry & Pet Stock Association, which will entertain the American Poultry Association for the week of Jan. 15-20, are "settin' up nights," preparing to make good the promise that the forthcoming show will be one of the most important exhibits of the season. The management proposes to make it to the advantage of every breeder and fancier to patronize this show—intends to put a premium on the financial value of a winning at Cincinnati.

Regarding the past efforts of the association and its purposes for the future Secretary Foy says:

"The Cincinnati Poultry & Pet Stock Association was organized in December, 1898, and the first show was given in January, 1899. A show has been given each year since and all have been successful financially and from a fancier's standpoint. The net proceeds of our last show were given to the charitable institutions of Cincinnati by vote of ticket purchasers, the five receiving the highest number of votes being awarded a share in proportion to their vote. For

the last three years we have had a large dog show in connection with our poultry,

THOS. J. FOY, SECRETARY.

and in 1902 and 1903 we had cats and hares as well. We now have a member-

ship of one hundred and fifty and it is growing rapidly. The present officers were elected at our last annual meeting and, with the exception of myself, have been actively connected with the association since its organization. Mr. Brooks was secretary from 1900 to our last meeting, when he was elected president. This is my first active connection with the association, although I have been breeding S. C. W. Leghorns for the past four years. Since the organization of our association the improvement in the character of the poultry raised in this section has been very noticeable. Instead of the mixed and re-mixed stock that the farmers formerly allowed to roost in the trees, we have dozens of well bred flocks of the standard varieties, well housed and cared for and producing as only a good flock will. It would be a bad mistake for any of the eastern or western breeders to come here, expecting to have a walkover, as the quality of the birds in our last two or three shows was very high. Our premium list is as liberal as any show in the country and for our next show we are promised as fine a lot of cups and specials as were ever offered at any western show. In connection with our next show, the Cincinnati Kennel Club, an allied organization, will hold a big dog show, under the A. K. C. rules, and we look for the biggest show of dogs ever held here. Our shows are all held in Music Hall building, the largest building for public entertainments in Cincinnati. The halls we occupy will hold 2,000 birds and 500 dogs and additional space can be used if it is necessary."

Our judges so far chosen are Theo Hewes, Thos. F. Rigg and F. C. Shepard. Other judges will be engaged.

NEWCOMERTOWN, OHIO.

The fourth annual exhibition of the Tuscarawas County Poultry Association will be held at Newcomertown, Ohio, January 10-13, 1906. Theo. Hewes, judge; F. D. Mulvan, secretary.

HUDSON, MICH.

The annual exhibition of the Southern Michigan Poultry and Game Fanciers' Association will be held January 31 to February 3, 1906. Jas. A. Tucker, J. W. Mulinix and H. A. Boies, judges. H. A. Boies, secretary, Hudson, Mich.

HOLYOKE, MASS.

The Holyoke Poultry and Pet Stock Association will hold their first score card show November 22 to 25, inclusive, 1905, and have engaged the following judges: Messrs. Felch, Ballou, Shove, Pierce and Crangle. All communications should be addressed to Geo. Barnett, Jr., secretary, 115 South street, Holyoke, Mass.

ELWOOD, IND.

The Elwood Poultry and Pet Stock Association will hold their third annual show Dec. 11-18, 1905. S. B. Lane has been secured to do the judging. S. W. Swihart, secretary.

FAYETTE, MO.

The next annual exhibition of the Missouri State Poultry Association will be held Dec. 12 to 16, 1905. The place of meeting will be selected at a meeting of

BEGIN PLANNING FOR THE FALL SHOWS.

Eggs from our prize winning birds, (1628 prizes won by us last fall) will hatch other prize winners. We sell eggs and stock of guaranteed purity at lower prices than others. We can please you. I SAVED \$15 ON 100 RODS

buying Advance Fence.—Johe Nierste, Westphalia, Ind.

You can save just what the fence dealer in your town would make if you bought your fence of him. It is a large item. If you love the fence dealer more than you do yourself, put your money in his till.

Advance Fence is sold only by the maker direct to you on 30 days FREE trial at wholesale prices, freight prepaid.

Advance Fence is scientifically constructed. It is made of best galvanized steel wire throughout. The top and bottom strands are double strength. The stay wire is continuous being twisted with the selvage from one stay to the next and wrapped twice around each line wire as it passes across the fence. The slight orrimp at the intersection of the stay with the strand wire prevents the stay from slipping and also provides for expansion and contraction. It is the simplest fence on the market, easily put up, durable and dressy. Made in 26 STYLES for all Farm, Poultry, Stock and Park purposes. Send today for Free Fence Book and Wholesale prices.
ADVANCE FENCE CO., 1355 Old Street, PEORIA, ILLINOIS

the executive committee in Sedalia, Mo., during the State Fair, Aug. 21-26, 1905. It is earnestly urged that every breeder of pure fowls in Missouri become a member of the Association by sending \$1.00 to the secretary at once. To be entitled to a vote at the next meeting members must have paid their \$1.00 at least 60 days previous to the annual show. This also insures their name and the varieties they breed printed in the catalog and premium list. The judges of the show are Theodore Hewes, Indianapolis, Ind., C. H. Rhodes, Topeka, Kans., and C. A. Emry, Carthage, Mo. These judges should insure a large show. H. P. Mason, secretary.

MOSQUITOES.

By S. A. McWILLIAMS, M. D.

Perhaps it is not generally known that many farmers have large incubators on their farms where they hatch immense numbers of mosquitoes' eggs. The time for hatching them is just after they quit hatching chicken eggs. July, August and September is the season.

There are several varieties of mosquitoes, just as there are several varieties of chickens. Their eggs can be hatched in any still water, anywhere. A rain water cistern is a good place, so is water left standing for some time in a barrel or ditch, in a pail or can, a swamp or marsh.

One species of mosquitoes lays their eggs on their sides singly, while another lays them by the hundred and glues them together in the shape of a boat. They are glued together and rest on their ends.

There are four stages in the life of a mosquito. The egg, the larva, the pupa and the imago or winged insect.

The first part of a mosquito's life (like a frog's) is spent in the water.

The eggs hatch in one or two days and are then called larvæ. They remain in the larval stage six or more days, when they gradually reach the pupa stage, in which they remain two or three days before their wings grow sufficiently to fly away as full grown mosquitoes to suck the blood and carry disease wherever they go—to man, beast or bird.

It is not generally known that if there were no mosquitoes there would be no malarial fever and ague chills. If there

were no mosquitoes there would be no yellow fever.

That species of mosquitoes called Anophelina carries the malarial poisons from one person to another.

That species of mosquito known as the stegomyia fasciata carries the yellow fever germ from one person to another.

That species of mosquito known as the culex, as well as the anophelina, carries from one person to another the disease known as filariasis.

Most people think a fly is a fly, and that there is no difference between a horse fly and a house fly. The house fly never stings. It has only a soft rubber mouth for sucking up particles of food, while the horse fly has a sharp pointed lance concealed within his proboscis by which he pierces the skin and then sucks the blood. Witness the agony of animals and the blood flowing from the wounds inflicted by the horse fly.

That species of a mosquito called the Anophelina sucks the blood at night from a malarial fever patient. The germs of the disease grow and develop in the mosquito, so that at the end of one or two weeks it becomes sufficiently virulent and poisonous to infect a susceptible person when bitten.

When a person is bitten by a mad dog, it takes some time for the germ to grow and become sufficiently virulent to cause hydrophobia.

When a boy on the fourth of July has lacerated his finger with a toy pistol, it takes some days for the germs of the disease to grow and multiply sufficiently to cause lockjaw.

It takes about two weeks for a person susceptible to malarial disease, who has been bitten by a malarial poisoned mosquito to develop the fever and ague chills.

Mosquitoes, infected in Italy, with the malarial germs, have been sent to London, England, and allowed to bite susceptible persons, who two weeks after being bitten were taken down with malarial chills and fever.

Another species of mosquito called the Stegomyia fasciata carries the poison from one yellow fever patient to another.

This mosquito must suck the blood of a yellow fever patient within the first three days of his illness, or it will produce no effect.

The infected yellow fever mosquito is no longer dangerous after 12 days from the time he last bit a yellow fever patient.

Farmers could easily get rid of mosquitoes by allowing no standing water to remain anywhere. All cisterns and vessels containing water should be thoroughly protected by mosquito netting. All marshes and stagnant pools should be drained, or where this cannot be done crude petroleum or kerosene should be poured over the water. This will kill both the mosquitoes and their young. Mosquitoes can be driven from the house by burning jimson weed mixed with salt-peter.

The larvæ of the anophelina mosquito can be seen resting in a horizontal position at the surface of the water, while other species rest in an oblique position, head downward, at the surface.

When disturbed the larvæ can be seen wriggling down through the water.

It is reported that the medical books of Ceylon, in the sixth century, describe 67 varieties of mosquitoes and 424 kinds of malarial fever caused by mosquitoes.

ORR'S WYANDOTTES ORPINGTONS

All the Standard Varieties of Both Breeds.

Birds, old or young, \$2 each, \$5 per trio.

T. CADWALLADER, Box 502, Salem, Ohio.

Select Your Pullets

Sort your pullets into groups of good and poor layers and select cockerels that will produce the greatest egg-laying strains. You can do it by the **WALTER HOGAN SYSTEM** without fail. Others have. Read what they say:

H. S. Fletcher, Watertown, S. D., member State Board of Agriculture writes: "I have worked it on three different flocks. The first pen in all three cases furnished over 80 per cent more eggs than the second pen. The system is all right."

Chas. Reister, New Albany, Ind.—"I believe your system is all you claim."

W. H. MacNeal, Parkersburg, Pa.—"I am satisfied there is value in the system."

J. H. Hintermister, Jr., St. Paul, Minn.—"I think that one can determine which are good or poor layers by your system."

Sister Gertrude, Maywood, Ill.—"I see it is all you claim for it."

Hon. O. C. Gregg, Supt. of State Farmers' Institutes, St. Paul, Minn.—"I regard it as one of the greatest of additions to the knowledge of the poultry world."

You can test it 60 days; money back if we don't "make good." Full particulars free.

Walter Hogan Co., 17 Natl. Bank Bldg., Fergus Falls, Minn.

NATIONAL WHITE WYANDOTTE CLUB.

The National White Wyandotte Club has prepared a list of \$100.00 in cash specials to be offered members at the poultry show to be held in connection with the Lewis and Clark Exposition at Portland, Oregon, the first of October. Ross C. H. Hallock, secretary, St. Louis, Mo.

AMERICAN WHITE PLYMOUTH ROCK CLUB.

The American White Plymouth Rock Club is pleased to announce that it will renew the liberal offer made to poultry associations last year; namely, fine handsome silk ribbons and a year's free membership in the club. All associations wishing to avail themselves of this offer should notify the secretary at an early date as the specials for all shows will be ordered at one time and associations applying later cannot be accommodated. The club is willing and glad to deal generously with all poultry organizations, so apply early.

We still have a limited number of our club catalogues on hand which we will send to all who apply as long as they last. If you are interested in White Plymouth Rocks or want to know about them, don't fail to get this beautifully illustrated book free. Application blanks and information will be furnished on your request to the secretary and treasurer.

SETH W. GREGORY, Delavan, Wis.

FREE SAMPLE OF READY ROOFING.

Leaky roofs spoil thousands of dollars' worth of products annually, and are a constant source of worry and annoyance. There is little cause for this if a good roofing is used—one that is really proof against all kinds of weather. This is what the manufacturers of **AMATITE** roofing claim for their product. This roofing comes in rolls ready to lay and any one can put it on the roof. With each roll they send free enough cement and nails to finish the job. They offer to every reader of this paper a free sample and booklet telling all about it if they write at once. Address the Barrett Manufacturing Company at any of the following offices: New York, Chicago, Allegheny, Kansas City, Cincinnati, Philadelphia, Cleveland, Minneapolis, New Orleans, St. Louis.

TRAINING COLTS.

Perhaps you have trained colts with great success for twenty years. Do you think a Chicago bookkeeper can do it as well as you can? Probably not. The man who is most successful in any kind of work is usually the man who makes a specialty of that particular thing. In the matter of shaving soap, the J. B. Williams Co., Glastonbury, Conn., have made a specialty for nearly three-quarters of a century, and naturally understand making shaving soap better than anyone else in the world. Common laundry or toilet soaps are not fit for shaving purposes. They make the face sore and irritated. If you want to try the "only soap fit for the face," write the J. B. Williams Co., Glastonbury, Conn., for a free sample. Their offer appears in another column.

J. C. Fishel & Son, Hope, Ind., the White Wyandotte specialists, are offering some great bargains in breeding stock. This is an excellent opportunity for those who are anxious to improve the breeding qualities of their flock. These special sales occur but once a year and are made simply to reduce their stock, thus giving them more room for their growing chicks, of which they have an exceptionally fine lot. You will find this stock just as they represent it to be and well worth the prices they are asking. Write them for prices and particulars and mention **AMERICAN POULTRY JOURNAL**.

Poultry Pointers

Tells how to feed chicks and all fowls, also use of beef scraps, bone, etc. Its free. Write for it. **Alfalfa Meal Co. 1632 Farnam St., Omaha, Neb.**

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 17 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

Prof. Henry says that success is only obtained by concentrating all efforts upon one line.

A two-years' course in Hog Raising: Teaching how to be successful.

How to secure the greatest profits.

How to get 17 lbs. of pork out of a bushel of corn and 19 lbs. from a bushel of wheat-fed hogs.

How to feed to double the growth and gain over usual methods; only healthy hogs profitable.

How to keep your hogs healthy.

How to utilize, without other expense than the subscription to this paper, the costly experience and gathered wisdom of the most capable and successful feeders.

Prof. Kennedy of the Iowa Agricultural College says "Your paper is a leader in its line on feeding."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' subscription to the **American Swineherd** and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition the wonderfully suggestive picture in colors, "Uninvited Guests," suitable for framing, showing the pigs partaking of a meal uninvited.

This equips you for a successful hog business.

AMERICAN SWINEHERD 542 Como Bldg., Chicago, Ill.

Questions and Answers

Questions asked by subscribers will be answered in this department.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please tell me in "Question and Answer" column what single and double mating is? D. F. H.

Martha, N. D.

Answer:—Single mating is where a fancier produces, or attempts to produce, both cockerels and pullets up to standard requirements from the same pen. Double mating is where one pen is mated to produce cockerels and another to produce pullets.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your next issue the following: Have a neighbor whose chickens have lost all the feathers on their heads and necks, and the necks are scaly. What is the cause and remedy? Would it be safe to buy pullets from him? Ours are all healthy and doing well. C. E. M.

Niagara, Ore.

Answer:—This is caused by a parasite called the depluming mite. Anoint the parts with lard and flower of sulphur, two tablespoonfuls of the former to a teaspoonful of the latter. Carbulated vaseline is also good. Would not advise the purchase of such stock.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please answer in the next issue of your valuable journal the following question: What is the cause of leg weakness in fowls, and what is a remedy if there is one?

Mohawk, N. Y.

A. E. S.

Answer:—Leg weakness in fowls is a form of rheumatism and is frequently caused by the fowls being kept in damp filthy quarters. Ascertain wherein the surroundings of your fowls is lacking and try and remedy same. This is also caused by the fowls becoming too fat. Give your fowls a teaspoonful of baking soda to each quart of drinking water and feed a cooling ration, such as wheat bran, middlings and vegetables of various kinds.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following questions in the next number of your paper:

I have lost about 50 young turkeys from gas forming in crops caused from drinking water. They look healthy and grow rapidly until I give them water and as soon as they drink will fall over and have fits. If taken as soon as they drink and held with the head down and work the crop so that the water will run out of the mouth they will recover. I have some very nearly two months old and if given free access to water will droop around and die. I have not been able to give them water since they hatched, and I find it very difficult to keep them from getting water now, as it has been raining. Can you give cause and remedy?

I bought some White Wyandotte eggs from a reliable breeder and find that

two of the chickens have bluish shanks and one of them instead of being white is blue. Will the shanks turn yellow and will the blue one feather out white?

W. H. M.

Answer:—Young turkeys should have water from the time they are hatched. You have probably kept the water away from them too long and when they did get it they drank too much. Unless young turkeys are overfed water will not hurt them. Your White Wyandotte chick that is of a bluish tinge will probably feather out snow white. The bluish shanks will probably remain that color.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I am just getting ready to raise a few fowls, and would like to ask a few questions to be answered in your "Question and Answer" department:

1. What is meant by "line bred poultry?" Are they any, or very much better than the other?

2. Do the Orpingtons lay as good as the Leghorns or Minorcas, and if not how near as well?

3. Will the Orpingtons bear confinement better than the other two breeds mentioned?

R. D. H. D.

Hackensack, N. J.

Answer:—1. Read article on line-breeding elsewhere in this issue. 2. This depends on the strain and the care and attention given them. 3. Orpingtons will bear confinement well, but probably not any better than Leghorns and Minorcas. This also depends on the care given.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I would like you to answer a question for me in the next month's AMERICAN POULTRY JOURNAL. I have a White Leghorn which laid an egg the other day, which had no yolk, nothing but the white, what is the cause of that? When I took the egg out of the nest I thought it was one of my Bantams, but they are separated from the other ones.

Brooklyn, N. Y.

W. B.

Answer:—It is no uncommon occurrence for fowls to lay an egg of this character. It is generally the last egg they will lay for some time, and in other cases it indicates a diseased condition of the egg sack, and is easily remedied by putting the hen into new quarters and giving her a change of diet.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please to give me a few pointers on the raising of geese. I do not see the goose question discussed as freely as everything else belonging to the poultry business. I have 80 head from two weeks to two months old, those two months old will weigh from 7½ to 8 pounds. What should they weigh at that age? I start them on stale bread and corn bread

Standard Poultry Food Greatest stimulating tonic known, inducing health, vigor, eggs and profit. Sold by dealers. If not there send for special trial offer. Standard Stock Food Co., Howard St., Omaha, Neb.

which is handsomely illustrated, and contains hundreds of specific opportunities for success, it matters not what your occupation.

J. W. WHITE

General Industrial Agent, Portsmouth, Virginia.

SEABOARD AIR LINE RAILWAY

with a good many unfertile eggs in the corn bread. After two weeks one-third bran and two-thirds corn chop with sharp sand. Am I feeding right? What should I feed after two months? Please answer in your valuable journal and oblige.

J. P. S.
Emporia, Kans.

Answer:—Will some of our experienced breeders of geese please answer above questions?

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please tell me in your next issue, must a Single Comb Black Minorca cock have five points to his comb or more, or doesn't it matter how many points he has in his comb to be thoroughbred Minorca?

M. B.
Detroit, Mich.

Answer:—The standard calls for five points on the comb of a Minorca, but one point more or less is not a sign the bird is not thoroughbred.

Every Heart=Ache

Every pain in the breast, difficult breathing, palpitation, fluttering or dizzy spell means that your heart is straining itself in its effort to keep in motion. This is dangerous.

Some sudden strain from over-exertion or excitement will completely exhaust the nerves, or rupture the walls or arteries of the heart, and it will stop.

Relieve this terrible strain at once with Dr. Miles' Heart Cure. It invigorates and strengthens the heart nerves and muscles, stimulates the heart action, and relieves the pain and misery.

Take no chances; make your heart strong and vigorous with Dr. Miles' Heart Cure.

"I suffered terribly with heart disease. I have been treated by different physicians for my trouble without results. I went to a physician in Memphis, who claimed that I had dropsy of the heart. He put the X-ray on me, and in connection with his medicine he came near making a finish of me. Some time before this a Mr. Young, of St. Louis, was in our town. He saw my condition, and recommended Dr. Miles' Heart Cure to me. I gave it little attention until my return from Memphis, when I concluded to try it, and am pleased to say three bottles cured me."

CHARLES GOODRICH,
Caruthersville, Mo.

Dr. Miles' Heart Cure is sold by your druggist, who will guarantee that the first bottle will benefit. If it fails he will refund your money.

25c CHICK MARKER FREE.

Every poultry raiser needs one. Punch a small hole in the web between the toes to identify one breed or strain from another.

By a series of marks no confusion can occur. For a short time the Gem Incubator Company, Box B, Trotwood, Ohio, offer to send you their marker free, also their large illustrated catalogue telling how to make money hatching fall chicks. This is an offer you should take advantage of at once. The Gem Incubators and Brooders have many excellent features that appeal to the practical poultryman, and they are substantially built of the very best materials, and the prices are right. Send them a dime or five 2c stamps to cover packing and postage and you will receive a marker by return mail. Please mention this paper.

MIDSUMMER COMFORT.

Those who have found the summer vacation problem a difficult one, from the standpoint of economy, will find some practical suggestions in the chapter on "Co-operative Housekeeping at the Seashore," by Isabel Gordon Curtis, in the August *Delinicator*. The matter is gone into in detail, and facts and figures demonstrate the advantages of the scheme. Other features of the magazine which appeal particularly during hot weather are "Cold Tid-Bits for Hot Days," pictured and described, and a variety of seasonable recipes in cookery under the titles, "A Dozen Fresh Fruit Pies," "Tartlets," and "Iced Deliciousness." Summer fashions and reading complete the number, which is unusually interesting and attractive.

KIPLING'S NEW STORY.

Rudyard Kipling has not been of late a frequent contributor to magazines. The August *Century* will contain a story by him, a tale of Americans in England called "An Habitation Enforced."

The story is said to be an unusually long one for Mr. Kipling, so long that the *Century* editors were minded at first to print it in two numbers, but it was decided to let it all appear in the Midsummer Holiday issue.

When located where I can't get ice I can still keep meat perfectly fresh during several days of hottest weather. I put it in a large vessel, crockery preferred, and turn over it freshly soured milk. Cover over entirely and set in a cool place. I change the milk at intervals of twelve or not longer than twenty-four hours. I keep lemons also plump and fresh in the same way. Few people know of the preservative properties of milk used in this way, says a writer in *Good Housekeeping*.

W. L. Fern, Elgin, Ill., the noted Single Comb White Leghorn specialist, reports that he will have one hundred very choice cockerels ready to ship by October 1st. Mr. Fern has spent years of time and hundreds of dollars in perfecting his strain, and can without fear of contradiction claim to have as good birds as the country affords. Any of our readers who are anxious to improve the breeding and winning qualities of their flock should write to Mr. Fern for prices. They will be treated right.

Mrs. T. F. Leonard, Mt. Sterling, Ohio, is offering some of her choice White Wyandottes for sale at extremely low prices, considering quality. Mrs. Leonard always gives a good share of the prizes wherever she exhibits and if any of our readers are looking for something good for the early fall shows they should correspond with Mrs. Leonard.

The Saving

in posts, boards, rails, staples and labor makes the first cost of **Page Poultry Fencing** less than that of common nettings, to say nothing of the better service it will give and the longer time it will last. Write for particulars.

PAGE WOVEN WIRE FENCE CO.
Box 5865 Adrian, Mich.

VICTOR D. CANEDAY
Box A, Taylors Falls, Minn.

HADAWAY'S PARTRIDGE WYANDOTTES

are the champions of America. They have won more prizes at the large shows the past few years than those of any other breeder. In order to make room for growing chicks I will now sell 200 breeders and exhibition specimens at half price. It's the coming breed, so send for free catalogue telling about them.

J. B. HADAWAY
696 N. Main St. Brockton, Mass.

First Hen, New York, 1904

Envelopes 3 1/2 by 6 1/2 inches, an extra thick, strong, smooth, hard slick white writing surface, and 125 Letterheads, 8 1/2 by 11 inches an extra heavy, hard, slick, fine smooth, pure white writing paper. All artistically printed to your order and illustrated with latest new Standard cuts of your choice breed of fowls, postpaid for \$1.00. Better printing at the price was never done. I'll please you. Make all money orders payable to me at Big Clifty, Ky.

J. R. HUDSON, HARDIN SPRINGS, KY.
We have saw samples of Mr. Hudson's printing. It is very nice and he is perfectly honest—EDITOR.

'NOTHING SUCCEEDS LIKE SUCCESS.'

Are you a stockholder?

For many years Chicago and the west have felt the need of a supply house—one that could satisfy and supply the needs of poultry fancier, chicken raiser, farmer or the office man, who sits by his desk day after day in the city, and one who has a few minutes each evening to which he enjoys the care of chicks, or the one who has ventured the purchase of a farm nearby and placed a competent person in charge that he might have a place to go and spend his vacation—all these people and many more have found the Chicago Poultry Supply House, 632 Lakeside building, 214-220 South Clark street, very centrally located. They claim "Everything for the poultryman," which is true in name. They believe in supplying the needs of the poultryman and farmer. Mr. Fred J. Phillips is manager. He is a practical poultryman, being a breeder for over fifteen years. He is also manager of the Rocky River Poultry Company, largest Rose Comb White Leghorn breeders in the United States.

Any information desired in poultry or houses is always cheerfully given by him. The volume of business which they have done in the past year has been enormous.

They are agents for the Model incubators and brooders, manufactured by Charles A. Cyphers; Rouse Perfection brooder, Puritan Chick Food, Morris' Poultry Cure, Mico Spar Cubical Grit, and hundreds of other articles necessary to a poultryman.

Owing to the great amount of business done, the company was incorporated some time ago and is offering a few shares of stock at a very reasonable price. No better investment could a person with a few dollars or several thousand ask for than to take shares in a live, wideawake, up-to-date poultry supply house. They have just added a new branch by putting up "Fly Bouncer," Fly Chaser and Phillip's "Death to Insects," both in liquid and powder form. They also do a large wholesale business and have placed goods in nearly every state in the Union.

It would be well for our readers to look into this matter. A letter to the above firm would be cheerfully replied to.

HE WON AN INCUBATOR.

Seventy-five chicks out of seventy-six fertile eggs is an extra record. Mr. C. H. Hamner, of Bayou Goula, La., did it in his incubator this spring and won a prize.

A 200-egg incubator was offered by the publishers of the *Southern Ruralist* to the person who obtained the largest hatch

from a machine purchased from their advertisers. The prize was to be awarded in April. The contestants sent sworn statements and signatures of three reliable witnesses.

The best result of them all was the score reported above. This high percentage—98.6—was obtained in a Prairie State Incubator. The givers of the prize allowed the winner to choose the machine he wished. Naturally Mr. Hamner's selection for his premium was another Prairie State Incubator.

Mr. Hamner is very enthusiastic over the excellence shown by the Prairie State. He finds it easy to attend. It runs evenly; doesn't overheat the eggs in either corners or center. The regulator is always to be depended upon. The ventilation was certainly good, for only one egg out of seventy-six failed to hatch.

Mr. Hamner is to be congratulated on his success. In April the *Southern Ruralist* fulfilled its promise. The publishers sent him by freight, prepaid, a No. 2 200-egg Prairie State Incubator from the factory of the Prairie State Incubator Company, Homer City, Pa.

THE FAMOUS MARY L. POULTRY PLANT FOR SALE.

In another part of this magazine there appears an advertisement offering for sale the famous Mary L. Poultry Plant, located at Sidney, Ohio. Perhaps there is not a poultry-keeper in the world who is not more or less familiar with the magnitude of this wonderful institution, which is readily conceded by all to be the largest, most complete and best equipped poultry plant in existence. For years it has been the "model" of them all and an inspiration to hundreds of poultrymen. People from every quarter of the globe have visited this plant, and look upon it as one of the evidences of Yankee supremacy and enterprise. Crowned heads of Europe have patterned after it and have established plants like it but upon a much smaller scale upon their estates. The Mary L. Poultry Plant is considered one of the wonders of America, and well it may be.

We understand that it will be sold at private sale, also that it must be sold quick, and that the lucky man will get it at a bargain. Here is, without doubt, a splendid opportunity for a wide-awake hustler to make a fortune and to acquire the finest poultry plant in the world at a sacrifice price.

Look up the advertisement and if you can handle such a proposition write quick, as such a snap won't be long in finding a taker. Kindly mention this paper when you write.

A. P. Tone Wilson, Jr., the real estate specialist, Topeka, Kan., can sell or trade your property no matter where located. Mr. Wilson is a very extensive advertiser, having ads in over 2,500 different papers and magazines and is therefore in a position to handle real estate to the best possible advantage. If you want to buy or sell write him for full particulars and mention AMERICAN POULTRY JOURNAL.

G. M. Shook, proprietor of Rosedale Poultry Farm, Joplin, Mo., has purchased a hundred-acre farm eighteen miles from St. Louis, Mo., and three miles from Valley Park, which will give him ample room to raise enough birds to supply the demand which heretofore he has been unable to do. He will move to his new location September 1 and will be ready to fill all orders by October.

John Keig & Son, Romeoville, Ill., who make a specialty of breeding choice Buff Plymouth Rocks, report that they will have a large number of choice birds ready for the fall shows. Any of our readers who desire something that will win should write early and secure first choice.

J. B. Bennett, Ringwood, Ill., breeder of prize-winning White Wyandottes, reports that he has some of the choicest young stock that it has ever been his pleasure to raise, and that he is in shape to supply birds for the early fall and winter shows that will win in the strongest kind of competition. Any of our readers who are desirous of securing something choice in White Wyandottes at a reasonable price should write to Mr. Bennett and mention AMERICAN POULTRY JOURNAL.

The works of the Mica Crystal Co., located at Warren, N. H., have been entirely refitted with new machinery and are now in condition to turn out a better product than ever.

WHEAT FARMS

The discovery that Alberta, Canada, N. W. T., is the finest winter wheat country is sending up the price of this valuable land. Crops of wheat are grown of 30 to 50 bushels per acre. Buy land now and profit by the rise. We have lots of good land and a fine, mild climate. You can pay for the land with one crop.

E. N. BARKER, Cardston, Alberta, Canada, N. W. T.

King's Barred Ply. Rocks

are attracting the attention of the poultry world. Why? Because they excel in many respects. A few eggs will demonstrate this fact to you. Can spare a few more settings. Write us today for circular and prices on breeding stock. Remember the specialist for best results.

O. L. KING Lock Box 4, Walnut Grove, Ill.

Bair's Barred Rocks

are daily proving their claim of being leaders for exhibition and utility. In my yards the 200-egg hen is a reality. Lady Pan, the greatest living hen, has a record of 247 eggs for year 1903 and 11 blue ribbons won in the largest shows of the country. I have for sale fine chicks from Lady Pan pullet line, and extra fine egl. breeding pullets. Eggs from selected matings \$3 for 15, \$5 for 30.

L. O. BAIR, 2721 Cherry St., Kansas City, Mo.

THE GROWING SOUTH

No other section is forging ahead so fast as the Southeastern States in agriculture, horticulture, factory building and general progress. Along the

SOUTHERN RAILWAY AND MOBILE & OHIO RAILROAD

are most desirable locations for farmers, stock growers and fruit raisers. Lands are the cheapest and most profitable in the United States, the climate pleasant and healthy, rain fall abundant, markets good. Land in large or small tracts on easy terms. Homeseekers' rates twice a month. The summer is a good time to investigate. Publications and special information furnished. Our department is a Bureau of Free Information for all seeking locations or investments.

Wyckoff's S. C. White Leghorns

Acknowledged everywhere the world's greatest laying strain; unequaled in standard qualities.
Without question the most profitable strain of poultry in America today. 1000 extra choice
rearing hens mated with grand, strong, early hatched cockerels must be sold at once to make room.
They are the ideal breeding matings for season of 1906, and we will make special inducements in prices to
early purchasers. When writing for prices and catalogue please state plainly just what is wanted. Address

WYCKOFF'S FARM,

Aurora, Cayuga Co., N. Y.

"MONEY in POULTRY."

Our new 84-page book for 1905 tells how to make it; also
how to breed, feed, grow and market your poultry for
best results. This book probably gives more reliable
information about the poultry business, obtained from
actual experience on the largest farm in America devoted
exclusively to the rearing of pure-bred poultry, than any
other book published. Describes and illustrates 25 varieties
of our pure-bred fowls. Quotes extremely low prices on
stock, eggs, incubators and brooders. Mailed for 4c in stamps.

FRANK FOY, Box 50, DES MOINES, IOWA.

\$300

If you are looking for a brooder that is a success from the
start, that will enable you to have enough of them to properly
care for your chicks, and will not cramp your purse,
that is easy to clean, and one that applies the heat direct
to the backs of the chicks. Send for free catalogue to the

PERFECT BROODER SHOP

CELORON, NEW YORK

System in Poultry Practice

BY JAMES
Shackleton.

30 Chapters, 147 Pages, One Dollar, Postpaid.

May 1, 1905. Sales of this book since Sep. 1, 1904—eight months—are larger than for preceding 18
months. It is meant to appeal to common sense and evidently succeeds, for increase is chiefly in places
where it has gone before. California always took more than any other state, and now takes more than
any other three. Canada has many and now takes more than any state but California. Even Australia
takes many. This book has been sold in every state of the Union, except two southern states, and Alaska.
In Canada, Newfoundland, P. E. Island, New Brunswick, Nova Scotia, Quebec, Ontario, Manitoba, As-
siniboia, Alberta, British Columbia and Vancouver Island. In Cuba, Hawaii, Philippines. In England,
Belgium, Germany, Australia, New Zealand and China. It is meant to be of equal value in every climate,
for whatever purpose fowls are kept, and evidently is so regarded. Sales are increasing rapidly every-
where. Enthusiastic testimonials are plentiful.

The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON,

Box A 12, Milburn, New Jersey

HOUDANS!

For more than thirty-one years Rigg's strain of Houdans has been the acknowledged
standard of Houdan excellence by all Houdan breeders and exhibitors at ALL the
leading shows of New York, Boston, etc., have drawn largely upon this strain. The
record made by the Rigg strain during all these years has never been approached
by any breeder.

Mr. Thos. F. Rigg, Iowa Falls, Iowa.

Driftwood Farm, Girdletree, Md., Dec. 17, 1904.

Dear Sir:—In 1898 I obtained in Colorado three Houdans that were purchased of you. I
took them to Brazil, where they were practically unbeaten by the best English strains, to
say nothing of breeding a lot of youngsters that hustled their Minoreas in egg production.

WALDO KENNARD.

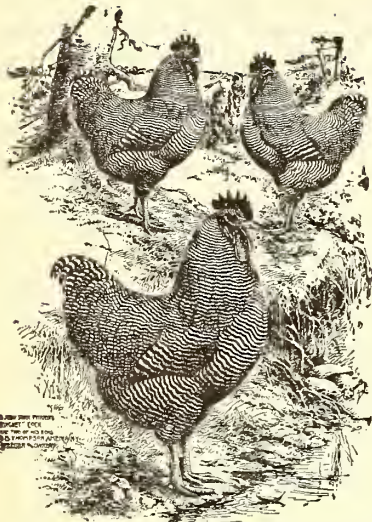

This is the kind YOU want—the large, vigorous, egg-producing, show winning kind.
More than 31 years of careful, systematic, line-breeding has given us this magni-
ficent strain of Houdans.

EGGS FOR HATCHING THAT WILL PRODUCE SUCH STOCK

We have no special pens in reserve for ourselves and other pens for our customers.
The same pens that supply us with our many winners and magnificent breeding
birds, supply our customers with eggs. Price of eggs \$3 per setting, two settings \$5.

THOS. F. RIGG

IOWA FALLS, IOWA

A "Ringlet" 1st Prize New York Cock and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation, Madison Square Garden, New York, January, 1903.

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup, presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 87 prizes. 36 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

EGGS FROM PRIZE MATINGS.
1 Sitting, \$5. 3 Sittings, \$10.
2 Sittings, \$8. 5 Sittings, \$15.
Per 100, \$20.00.

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others. My matings this season are the best I ever owned. * * * * *

At the Great National Show, WASHINGTON, D.C., in hot competition with over 300 birds of these varieties, the best that could be found regardless of price, I won 45 Regular and Special Prizes on 39 Entries, including First Prize on Breeding-Pen in each variety, Special for Best Display in the American Class, Special for Best Exhibit of Plymouth Rocks, Sweepstakes Special for Best Cockerel in the show (Bantams excluded), and this on my First Prize Barred P. Rock Cockerel. My winning White Wyandotte cock was pronounced by the judges to be the best they had ever seen. I won twice as many first prizes as all other exhibitors of these varieties. My BUFF ROCKS, at Boston, 1899, in hot competition, won more first and special prizes than all others. My customers are winning all over the country. If you want the BEST, write me. Hundreds of Choice Exhibition and Breeding Birds at Honest Prices. Catalogue of America's finest Plymouth Rocks and Wyandottes free.

A. C. HAWKINS, Lock Box 25 Lancaster, Mass.

COLUMBIA SCHOOL OF POULTRY CULTURE,

Box 722,

WATERVILLE, N. Y.

We Can Teach You How to

RAISE POULTRY PROFITABLY

If your poultry isn't paying as it should, you are making costly mistakes. Our course of Instruction will quickly teach you how to make any yard (large or small) pay from 25 per cent to 50 per cent profit. Your knowledge and ours combined will make you successful. The individual home lessons, delivered regularly at your very door, are prepared by practical poultrymen who have by actual experience mastered the problems which worry nine-tenths of all poultry raisers. You get no theoretic instruction. After a little study you can discover your errors and overcome them. The directions are easy to understand and follow, and big paying results are sure. If you want to qualify yourself as manager of a poultry yard and accept one of the

MANY LUCRATIVE POSITIONS

we have on our records, our Course of instruction will soon make it possible. Poultry Culture is not drudgery when rightly conducted. It is a healthful, profitable, enjoyable vocation for man or woman. Write for interesting free literature at once. Ask for circular showing some of the good paying positions we have open for competent men.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's. Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

ORIGIN AND HISTORY OF THE BREEDS

The Source of the Various Varieties of the Cochín Family—Found in a Crude State Throughout the Chinese Empire, and Bearing Several Local Names—Were of Several Colors and Carried Both Single and Pea Combs—The Present-Day Cochín a Fowl Possessed of Scarcely a Characteristic of the Original Type—How the Breed Characteristics Have Been Fixed—Popularity and Good Points of the Breed—Especially Desirable for the Cottagers—Unsurpassed as an Exhibition Fowl

Paper No. 2.—Buff, Partridge, White and Black Cochins.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal

In 1843, at the conclusion of the war between England and China, the northern part of China, including Shanghai, was thrown open to the vesselmen of Europe. This was the beginning of a new era in the poultry business of England and America. The Englishman, always a fancier, was quick to appreciate the worth of the Chinese fowls. Fowls of such size and color markings had never before been seen by the vesselmen, who lost no time in making purchases and taking the new and wonderful fowls to England and India. Among the first lot of these fowls taken to England was a consignment which was presented to Queen Victoria, in 1843. It may have been the importer's love for his noble and gracious sovereign, or maybe it was a shrewd business calculation which prompted the presentation to the Queen of these rare fowls. If the last named motive prompted the gift, it was indeed a wise business calculation. The fowls created a great sensation. We are told by Tennan, in 1856, that "the poultry world went stark mad. Fabulous prices were paid for specimens of the breed. A dozen Cochín-China fowls sold for as much as a good farm was worth." Saunders said, "a cock and two hens were thought to be cheap if bought for less than \$250." Avil reported a sale of two males and four females at 240 pounds, English, or about \$1,200. Queen Victoria, seeking to confer a blessing upon her people, saw to it that all eggs from her yards were placed in proper hands, that the breed might be extended throughout the land. The Queen's fowls were portrayed in the *London Illustrated News* of December 22, 1843, this being the first illustration of the Cochín-China fowl given to the western world.

Mr. Tegetmen, the noted English authority, questioned the appropriateness of the name Cochín-China, holding, and seemingly with correctness, that they were a variety local to Shanghai. He says:

"As in the case of many other varieties of fowls, Cochins are known popularly by a name to which they have no claim. Robert Fortune, who passed many years in various parts of China, says: 'I firmly believe that what are called Cochín-Chinas and Shanghais are one and the same. One thing is certain—the breed you have in this country (England) are plentiful in and about Shanghai.' They were discovered after the war, and frequently brought to this country, and taken to India by captains of trading vessels. Was not this the date of their introduction to England? And what grounds has anyone for supposing they ever saw Cochín-China? It may be thought that this variety might have been earlier known, owing to our long established commerce with Macao and Canton, but Mr. Fortune says this is a breed little known in those warmer parts of China, and that, in fact, the southern Chinese were as much struck with the size of the breed as we were. He adds: 'The Shanghai breed seems to be more common about Shanghai than anywhere else in the north, but I found it over all the low country of that part of China. The southern breed has long

been well known to sea captains and English residents, but there is nothing very marked in their character.'

"Having stated the date of introduction and the place from whence they were derived, Mr. Fortune informs us as follows, respecting the characteristics and treatment of the birds as they occur at Shanghai itself: 'The Shanghai breed occurs both with feathered and unfeathered legs, but more frequently with unfeathered. The most admired kinds are the game-colored ones. However, I am safe in saying that the Chinese do not attach as much importance as we do to purity of color. Large size and large eggs are what they most admire. Although it is certain that the Shanghai fowl is frequently met with in its native district with unfeathered legs, even more frequently than with feathered or booted legs, nevertheless, in our country, fashion has decided most imperatively in favor of the feathered leg birds, to which alone prizes are now awarded at our poultry shows.'

"In accordance with the facts that these birds were imported from Shanghai, and were comparatively unknown in Cochín-China, it has been thought by some writers desirable to endeavor to correct the popular, but erroneous, name of Cochín, and to substitute that of the port from whence they were originally obtained. But the effort has not been crowned with success, and to a large majority of poultry breeders they are known only as Cochins."

Mr. Geo. E. Haight, traveler, fancier and writer, visited China and the Straits districts, and thus wrote a decade ago:

"I believe I promised in my last letter to let you know if I found anything new in Southern China in relation to poultry. Although there are no distinct breed of fowls bred or known in China by the Chinese, there are yet a great many specimens to be seen in all parts of the empire, and so closely do they resemble each other in general appearance that it is quite difficult to understand why distinctions should be made; but I find that the different names of all Chinese fowls have been given them by the different foreigners who have brought them from various places in Asia, and that if they have procured them at Shanghai they have called them Shanghai fowls (red, gray, buff, as the case may be), and if from Hong-kong, the Hong-kong fowls, and so on, until we have a dozen or more different names for the same variety. They differ in some minor detail, it is true, for no two can be found of exactly the same color. Some are a chestnut color, others darker, and some quite light, yet they can all be seen in the same yards together, bred at random, and producing many different colors; but in size and shape they are about the same, and are known simply as Chinese fowls.

"In various parts of China (and intermixed with other fowls) can be seen a large, faded, buff-colored fowl, the male bird being a light buff with black penciled neck-hackle, dark wings and black tails with a greenish cast. Some of them have single combs, others resemble the pea-comb. Their legs are yellow and well feathered. The hen is two or three shades lighter (in fact, almost white), and has a heavy body, short, yellow, well-feathered legs, black hackle, dark gray wings and tail. These fowls will weigh about eighteen or twenty pounds per pair. From fowls of this description I am convinced the Light Brahma originated. I have talked a great deal with old residents of China, some of whom know what our Light Brahmas are and have seen and raised them, and they all agree that they came from the fowls I have described. I am convinced that Dr. Brown was the first to notice them in China, and to keep them separate as far back as 1840, and that he was one of the first (if not the first) to introduce them in America when he left China on a visit to his father in Connecticut in January, 1847, bringing a number with him.

"There is an impression in the minds of many breeders at home and abroad that all our present varieties of Cochins are descended from the original Cochín-China fowls sent by the British ambassador from China to Her Majesty, Victoria, of

England, in 1843. This is hardly possible, for the Queen did not exhibit her Cochins until April, 1846, at the Royal Dublin Agricultural Society, although prizes were offered for Malays and other Asiatic breeds at the London poultry show, held at the Zoological Gardens, London, in 1845. Between 1843 and 1846 several private purchases were made from ships coming from Chinese ports. Sir Richard Ansley O'Donnell, of Newport, Mayo, Ireland, had, in 1846, a nice flock of deep golden buffs with small single combs and wattles, black penciled hackles, short, black tails, smooth, yellow legs, large size of body and slightly tapering to the tail.

"At the same time William Mairs, a Scotch gentleman living two miles from Newport, had a few Chinese fowls, known afterward as Gray Shanghais. Our informant, Joseph Wallace, while temporarily residing at Newport, received a present of the Shanghais, and many a time, with young Sir George, they tried the mettle of the buffs, as they were pugnaciously inclined. The buffs possessed the same general characteristics as those bred by J. Joseph Nolan, of Dublin, to whom Lord Heytsbury, Lord Lieutenant of Ireland, gave the first pair that were presented to him by the Queen in 1846. The Gray Shanghais were more rangy in form, the feathering soft and loose, and a few downy feathers appeared on their legs.

"In connection with the Royal Cochins-China fowls, it may be surmised that the original stock was in the hands of others besides those of her majesty before 1846, though Mr. Dickson, the English poultry author of that time, in his work, published in 1847, makes no allusion to the Queen's fine fowls. This strange fact is accounted for by an old English fancier, who says that Mr. Dickson's work was prepared several years before the advent of the Queen's Cochins-Chinas, and that owing to the delay of publication, absence and sickness of the author, it went to press without mention being made of these rare and grand fowls, for, on no other reasonable grounds could such palpable inadvertency be excusable."

Thus rests the case of the origin of the Cochins. The facts are clearly shown.

THE PRESENT DAY COCHIN FOWL.

America and England each has its type of Cochins. These types differ greatly in form and feathering. American fanciers fancy the short legs; full, soft, fluff and hock; full, round breast and the forward carriage. The English demand that the Cochins be a fowl of long legs; long, stiff vulture hocks; flat, high carriage breast.

As has been shown, the Cochins, as they came from China originally, were of various colors and shades—red or cinnamon buff, brown or partridge, pale or lemon buff. The White and Black Cochins were received several years later.

Crude, indeed, were the original Cochins. Out of chaos the fanciers have brought and perfected the beautiful Cochins of today. We of the present generation owe these faithful, earnest, skillful fanciers a very large debt of gratitude. Let us guard well their handiwork. It is a valuable heritage. It is our duty to preserve the priceless legacy.

The American Standard of Perfection recognizes the following varieties of Cochins: Buff, Partridge, White and Black. The Buffs are the most popular, being the most extensively bred and exhibited, followed closely by the Partridge variety. The Whites, once very popular, for a time in retirement, are again being bred and shown to a considerable extent. The Blacks have never been as popular as they deserve to be, the introduction of the Langshan being a severe blow to this variety.

The Pea-comb Partridge Cochins, originated in 1871 by Mr. Chas. F. Edmonds, of Melrose, Mass. They were a cross of the Partridge Cochins and the Dark Brahmas. They did not meet with favor, and it is doubtful if any are in existence today.

BREED CHARACTERISTICS.

Standard weight for Cochins, other than Black:

Cock, 11 pounds; cockerel, 9 pounds; hen, 8½ pounds.

Disqualifying weights: Cock not weighing 9 pounds; cockerel not weighing 7 pounds; hen not weighing 7 pounds; pullet not weighing 5 pounds.

Standard weight for Black Cochins:

Cock, 10½ pounds; cockerel, 9 pounds; hen, 8½ pounds; pullet, 7 pounds.

Disqualifying weights: Cock not weighing 9 pounds; cockerel not weighing 7 pounds; hen not weighing 7 pounds; pullet not weighing 5 pounds.

The Standard Cochins is a massive, full-feathered fowl, with dignified carriage. The body of the male should be broad, deep and well rounded from point of breast to abdomen; from breastbone to tail, broad and well rounded, depending more on length of feathering for fullness than on muscular development. Back, very short and rounded. Legs set well apart and very short. Comb, single, upright, five points. Wattles and earlobes, red.

The female should correspond in a feminine way with the male, being shorter and rounded, presenting a deep, plump appearance.

The Buff should be a clear, golden buff throughout in plumage color. Few there are, however, which do not show some black in wings and tail. This is not as objectionable as white, which is found in tail and wings and undercolor of some buffs.

The White Cochins should be white throughout. In Black Cochins the plumage should be one uniform, lustrous beetle-green shade of black on the surface, with sound undercolor to skin.

Mr. W. H. Harrison, Jr., Toledo, Iowa, who is closely identified with the production of the modern Partridge Cochins, responds to our request for a few words regarding this member of the Cochins family:

"It has been a pleasure to all lovers of the beautiful to watch the wonderful improvement of modern Partridge Cochins as they have been developed by American breeders during the past ten years. It has been no easy task to evolve the full-feathered, low, blocky, rich mahogany red females of today from the close feathered, high stationed, light brown, clay-breasted, lemon-hackled hens of a dozen years ago, or to change the males with their lemon hackles, their long legs and close feathers, to the present day ideal cock birds, with their short, shanks, broad, low bodies, with feathers as fluffy and as long as those of their buff brothers, and with hackle and saddle with dark red tips and edges.

"There are breeders who still cling to the old style Cochins, but they have to sell their stock at farm prices. We now only occasionally see a ribbon on the pen of a Cochins of the old type.

"There are few varieties of standard bred fowls that will attract so much attention in the show room as strictly modern Partridge Cochins. The Partridge Cochins male should have breast, body, thighs, shanks and tail of rich black feathers, with a green sheen. The saddle and hackle striped with greenish black, tipped and edged with deep, rich red. The back of deep brownish red. The females should present an almost uniform shade of rich mahogany red all over, with the exception of the black tail, which is almost hidden with the long cushion feathers, and the hackle, striped with black. Each feather should be penciled with not less than two bands that conform to the shape of the feather. The best penciled specimens will show three, four and even five perfect bands of black or dark brown penciling. The hackle should be tipped and edged with rich red."

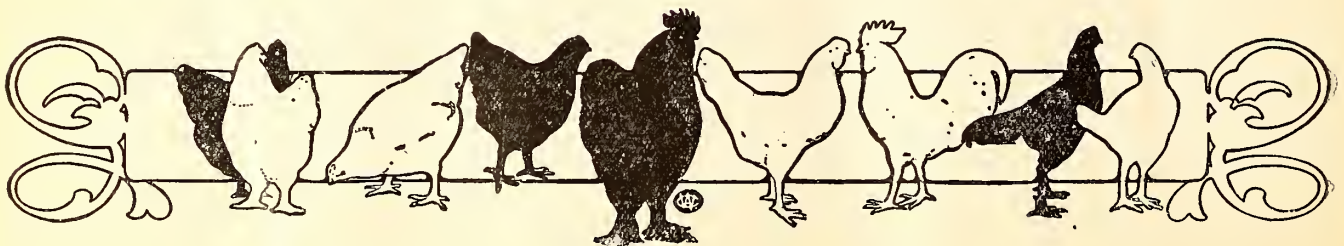

AS BREEDERS' AND FANCIERS' FOWLS.

The Cochins is highly prized on account of its ability and disposition to yield a goodly number of eggs during the winter months. As a market fowl they are not commercially rated as among the most profitable. In the very nature of things a Cochins is slow, comparatively, in maturing.

For the cottagers the Cochins are especially desirable. They are restful, contented and easily confined and handled. They yield a bountiful supply of eggs and meat for the table.

As an exhibition fowl they are unapproached. No other fowl can compare with a typical Cochins in show room attractiveness.

Eggs for hatching and breeding and exhibition stock are in great demand, and at prices far in advance of that secured for eggs and stock of many of the other breeds and varieties. There is pleasure and profit in the breeding of the Cochins.

THE INCUBATOR MANUFACTURERS AND MEMBERS OF POULTRY PRESS ASSOCIATION.

1. Resting in the shade. 2. Off for a ride in the gasoline launches. 3. Around the festive board. 4. Cooling off.

During the recent meeting of the Incubator Manufacturers and the National Press Association at Indianapolis, the members were entertained by Messrs. Hughes and Pierce, at Broad Ripple, a beautiful summer resort near Indianapolis. The above photos were taken during their sojourn by the waterside and speaks louder than words of the delightful time they had. This illustration furnished by courtesy of Theo. Hewes.

Monthly Prize Article Department

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to G. I. Armitage, Hopeville, Iowa, and second prize to A. H. Kirk, Orange, Va.

EVERY MAN OF BUSINESS SHOULD HAVE SOME SIDE LINE.

Every business man or woman should have some "side line" to be followed for profit possibly, and certainly for pleasure, something to which they can turn from other worries and find recreation and pleasure. Poultry has been my recreation for some time now and in it I have found not only pleasure but profit. But to be profitable it must be followed persistently, not intermittently, but to a lover of fowls the pleasure is great, and to the novice the study is extremely interesting.

When I contracted the fever, sometime since, I decided to go slow, so when making my list of journals for the next year I added two or three poultry journals and began the study at odd times, and here is where I got my first surprise. The teaching of those journals was wonderful in its variety and, to say the least, puzzling to the novice. Here a man advocated dry feed alone; perhaps, according to the next man's view to use that method was to court certain failure. There was the advocate of the warm house, the cold house, the curtain front, large house, small house, colony house, and so on to the end of the chapter.

Now, this does not mean the teaching of the journals was not good. Not by any stretch of the imagination could you come to such conclusion. I did not throw the journals away, order them discontinued and quit in disgust before I had begun, although, I confess, I found many things puzzling to the novice at first.

Right here is where you write success or failure in your undertaking. Your ability to discriminate, to select the good from the bad, the wheat from the chaff.

If you are sick and the doctor called he does not give you all the medicine in his case, but selects that which will be of value in your particular case. To carry the illustration farther: Here is a man breeding Barred Rocks. He tells you they are unequalled. I breed White Wyandottes and am so well pleased that I can see nothing else, while you may be an enthusiastic breeder of Leghorns, and that does not mean that either of us have made a mistake. Taking into consideration our environments, temperament, likes and dislikes, each of us have the best.

Just so in winnowing the wheat from the chaff of our poultry press we must take into consideration our environments, whether the theory can be used at all under our peculiar conditions, for the conditions under which we labor are peculiar to ourselves. No other worker in the fields of poultry culture has the same condition to meet that we have.

Having decided that it has value, we must next take into consideration the enthusiasm of the advocate, for all advocates ought to be enthusiastic. It takes enthusiasm to convince; in fact, if the theory you are considering did not have an enthusiastic advocate behind it you would probably never have had it under consideration.

Having given due consideration to that point, we must next consider whether it is better than the method at present used. Next the cost, if any, and the probable returns. Having considered it from all its bearings, then consider the evidence in its complete form. Perhaps it will cost more, but if the returns are increased it may still pay to make the change. Give all the evidence due consideration and use your judgment.

Treated in this way there are not many theories advocated, particularly if advocated by a number of men (for you can lay it down as an absolute rule that where you see a number of men honestly believing in one thing, there is some truth in it; it may be only a grain of truth in a large amount of chaff,

but it is there if you have the patience to search for it) but what has value.

So I would say, in conclusion, use the poultry journals, and if you do it intelligently they will be of very great value to you. True, there are some untruths in the journals. Men with axes to grind promulgate untried theories, but, in the main, they have a basis of fact. I now receive nine poultry journals, and all of them more than pay.

G. I. ARMITAGE.

Hopeville, Iowa.

CAPONS ON THE FARM.

At this time of the year most farms have a great many young cockerels on hand that would bring but a little if sold, and if kept will be a menace to the growth of the pullets and quite poor eating if kept till all are eaten.

Now, if these same cockerels were caponized they would be as quiet as the pullets. They would bring a fancy price next winter, when fully grown, or they would be fine eating for the family during the winter, and after the first capon was eaten there would be mighty few coarse, tough, young roosters used on the table of that farm.

Most farmers attend to their own calves and pigs. Why not their cockerels? There is more money in the latter, when care and feed consumed is considered.

None of the smaller breeds, such as Leghorns, Games, etc., pay to caponize, except for home consumption, but any of the Asiatic or American classes make fine capons, as they can be made to weigh from eight to twelve pounds, and weight is the object to aim for in capons for market. The more you can make them weigh, the more you get per pound for them.

Any manufacturer of caponizing instruments will send you instructions on how to caponize, and after carefully reading them over several times, so as to be familiar with each step, and a little practice, you would be surprised how simple the operation is and how quickly it can be performed. Any season of the year will do, though I prefer May or June and September or October.

After purchasing your instruments select your chicks (not over six for the first time), and confine them in a clean, light coop for at least twenty-four hours, without food or water. They should be about eight or ten weeks old, weighing two or two and one-half pounds, and their combs just nicely started and beginning to get red.

For your operating table use a plank, on horses, about waist high, with two holes bored into the plank, through which your cords (I prefer light straps), holding wings and legs, drop, and to which are attached your weights.

Have your instruments spread out on one end of the plank, with caponizer threaded and a dish of water on the other. Lay the chick on the plank on its left side and securely fasten wings and legs. Dampen and pick the feathers from in front of the thigh joint, and with the knife make a cut about one inch long between the last two ribs; slip the spreader in, prick open the thin skin you will see, and if the intestines are empty the testicle will be seen next to and attached to the backbone. This you remove, cords and all, with the caponizer, being careful not to rupture the artery just back of it. Turn the chick over and go through the same thing to get the other testicle.

The cuts will heal quickly and if you intend giving free range at once, punch the web of their foot with a poultry marker or harness punch. Let them have range until about two weeks before selling, then confine in a small yard, or crates, and fatten.

The following is my experience last year with some late hatched Buff Plymouth Rock cockerels that I did not care to sell as breeders, and if sold at market price, would have brought about twenty cents each.

They were caponized in September, permitted to run with my laying hens during the winter, having the same feed, and were sold the 1st of February for nineteen cents per pound, live weight, and averaged eight pounds each. Did caponizing those cockerels pay?

A. H. KIRK.

Orange, Va.

The breed which you like best is the one which you will be most successful with, for the reason that you will be more interested in the work and will give it closer attention.

Do not keep too many fowls in a pen; it is far better to cull down closely than to do this, for a smaller number will do so much better.

The man who makes a failure in poultry keeping can blame only himself. Treat the fowls right and they will treat you right.

THE SCRATCHING SHED HOUSE.

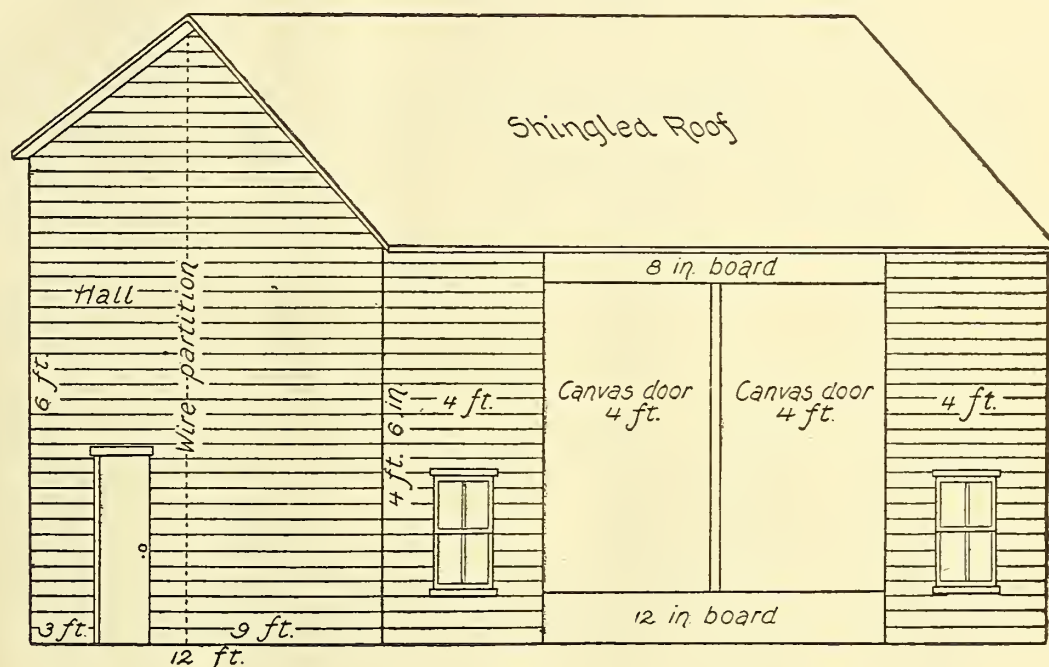

A Strong Argument in Favor of the Curtain-Front House for Both Winter and Summer Use.

It would scarcely seem necessary, in view of all that has been written on this subject, to say anything more, but I find so many through the country that never saw the open scratching shed, and I also received an inquiry from West Virginia, in reply to my article in last March's AMERICAN POULTRY JOURNAL, asking what it is, so I have decided to make this article, as near as I can, explanatory to the title.

There are numerous plans, differing slightly in makeup and detail, but the general principle is the same—an open front exercising room for the fowls; these are accompanied by a closed roosting room. I give herewith a sketch of the one I now have in use, also a proposed new one I want to test as soon as I can get it built. This (last) plan is original with me, that is, I never saw nor read of a similar one, but from experience (what counts!) I believe it will be, not only economic in construction, easy to care for the fowls, etc., but I also believe it will be the greatest health promoter possible to have. This needs no "roosting room accompaniment," as the one room is all combined. Roosts will be in north end, away from possible drafts, and nests will be up from floor, for warmth and room, water dishes will be on a shelf about six inches from floor, in wire partitions, so one dish answers

a cold, "swelled head," roup, nor any other sickness among her fowls these two winters, and they have been the most severe ever known here in this severe climate, and I think they also layed quite well—much above the average in this locality, I am positive. There was not a frosted comb, either, although the old cock bird froze his wattles some, from getting them wet drinking. And still I have heard "Wyandottes are a tender breed!" If a breed can endure this kind of treatment through over three months when the thermometer sometimes drops over 30 degrees below zero and snow four feet on the level, and is "tender" I want to see some of the *hardy* ones.

The second winter I had my shed I kept a pen of White Wyandottes in it day and night. I thought it pretty cold, but lacked room. I put up double burlap curtains, which were lowered at night, and in severe south storms the outside one—a thin one that admitted some light—was kept closed. These fowls were *perfectly healthy* all winter and next summer as well, layed all winter, not a frost bite, and seemed perfectly happy and contented, except their feet got cold. I find a fowl—the American class at any rate—need their feet and legs protected much more than they do their heads. These are naturally cared for at night, but during the day, even when exercising, they suffer in this way if floor is very cold. It is hard here to keep the floors warm, as this is a clay (poorest kind) soil, and floors must be raised to secure dry quarters. Mine are board, on stone foundation, and are always cold in winter. I believe, when I build again, I shall try cinders, if I can get them. Mr. Cole banked mine very thoroughly last fall, and they seemed much more comfortable last winter. Of course,

for two pens. The drawing only shows one pen, but I intend to build two to four.

Previous to a year or two ago, if any one had proposed to me wintering fowls in this climate, in an "open roosting pen," I should have considered them "a little loony," to say the least (notwithstanding my experience, mentioned hereafter, which necessity compelled me to make, with a pen in the scratching shed), but I am going to be a *firm believer in pure air*—for poultry as well as humans—and I speak from experience and study. Until last winter I had never been troubled much with damp walls, from frost, as I had always kept doors open enough to dry out the buildings, but last season I raised a lot of fall chicks, so they moulted through the winter, and it was such a severe one, I felt compelled to keep the houses closed most of the time, on account of these poor, half-naked things, as my partitions are mostly open ones. The result was an epidemic of acute catarrhal colds (not roup) and houses damp and unventilated. I have *always* noticed the fowls kept in rather open buildings are the healthiest flocks I have ever known. While I do not believe in drafts of air, still I can cite a case where drafts did not cause trouble—but it is still a mystery to me why they did not. Three or four years ago I started a sister-in-law in White Wyandottes, and for two winters they kept them on barn floors, over stable, where it is not battened, and some pretty big cracks. She has not had

I keep *lots* of litter on the floor, which helps greatly toward warmth. Over 50 per cent of farmers, I think, provide no litter—except the accumulated droppings of months!

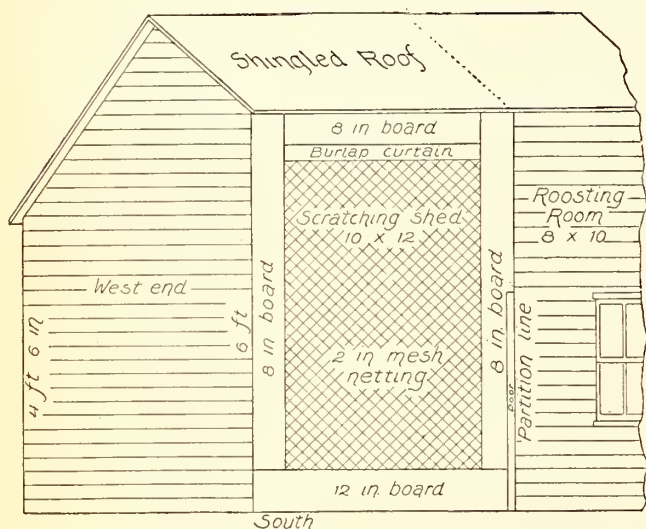

Visitors seeing roosts in shed would say, "You don't keep them here *nights*?" "Yes." "Well, I'll declare, and how red their combs are for winter! You certainly know how to care for them," etc.

I think this fall, instead of replacing my glass sash in roosting rooms, I shall substitute heavy muslin, but I shall be sure the rest of buildings are very tight, and I shall expect to winter a lot of healthy, profitable fowls.

Now, as to descriptions. No. 1 represents the present shed in use here, and needs no further explanation than sketch gives. It is surprising how many uses one finds for them. If I had several I could conveniently use all. During spring I use it for "sitting room;" it is very handy for this. I put a row of removable nests all around. As I hire strange sitters from neighbors, I can put them in here for a few days, and they have plenty of air, and room to dust, eat, drink, etc., while getting used to surroundings. Later it makes a fine "bed-room" for either adult or growing stock. This has a burlap (made from grain bags) drop curtain, but is not satisfactory, as a heavy south storm always drifts in on each end of curtain, as it is impossible to make it tight.

No. 2 will have sliding doors made of light frame and cov-

ered with tent canvas or heavy unbleached muslin. These can be "kept where they belong," and I feel sure will save much time, annoyance and work, beside being much neater. Of course, in this arrangement the entire front cannot be open, but as drawing shows, two windows, of glass, one on each side of door, to be raised on pleasant days. During south storms, when doors must be kept closed, these, with the muslin, will admit plenty of light to induce exercise. There *must* be lots of light, or hens will not hunt and work as they should, but too much glass causes frost to collect, with resultant dampness. With these doors and windows opened on sunny days the whole room will get its "sun bath" and fresh air galore, which means germ destroyer and cleaner. Note that the roosting room is *not shut up, dark and airless*. I feel sure there will be no trouble here with colds, and I also think the inmates will not suffer by cold. If I find it too cold nights I shall put up a drop curtain before roosts, to be lowered at night, but feel sure this will be unnecessary, even here. Although

our houses are cold enough frequently to freeze water over (warmed when given) in two hours, and an egg will sometimes freeze and burst in an hour after being laid, still I have never yet had a Wyandotte freeze a comb, and in this weather they "sing," work and lay, and I find those kept in the scratching shed are the greatest hustlers, and, of course, lay the best.

There is much more danger in keeping fowls too close than in giving too much air. I am more and more convinced of this. But there is *much* also in feeding to counteract the effects of cold, but as "that is another story," we will not touch upon it here. With proper feed, a rightly constructed scratching shed is a good winter quarter in any climate, and while I have never been south, it seems to me it would be ideal there. I think those who have never tried one would not be disappointed if they build one after my "new" plan. I should be pleased to hear from anyone using it, telling results. Of course it should *always* face the south; if this is impossible, then west is best for winter use, and east for summer use.

Winwood, Pa.

MRS. DENTON COLE.

The poultry business is not one that is suitable for invalids and people who have failed at everything else they have undertaken.

All poultry yards should have shade in them. Plum trees are excellent for this purpose.

Indigestion, resulting from improper feeding, is the cause of most diseases.

Cornmeal will give a golden color and buckwheat a white color to the skin.

When poultry is overfed it cannot be put in the proper market condition.

Don't move the layers more than is actually necessary, as it is apt to check their laying.

Market the sexes separately, be they dead or alive.

POULTRY ADVERTISING.

The Liberal Use of Printer's Ink the Best Method of Letting People Know What You Have For Sale.

Poultry advertising is no new thing. It is probably true that no other agricultural papers carry more advertising than some of the poultry papers. Certainly no live stock paper carries more live stock advertising than the AMERICAN POULTRY JOURNAL. It may, therefore, occasion some surprise when the writer gives it as his opinion that poultry advertisers have hardly begun to realize their opportunities. It is frequently remarked by those familiar with advertising in the agricultural papers, that live stock advertising is not up to the standard of other forms of advertising. It is said that live stock advertisers, as a rule, are not pushing their products with the skill and persistence manifested by other advertisers. Poultry advertisers may feel disposed to resent this and to claim that those engaged in the poultry business are quite as brainy and resourceful as most other people at least. Whether poultry advertising suffers in comparison with other varieties, is not so important, but as poultry advertisers it is, at any rate, important that we should improve our methods where they are faulty. My own opinion is that no other variety of live stock is so well advertised as fancy poultry, but there are very few good poultry advertisers. I believe that good advertising is the one great lack now in the poultry fancy. The few fanciers who advertise shrewdly, persistently and adequately, are already receiving excellent results. There is no good reason why others should not share in those results.

The purpose of advertising is broadly "to let the people know." This is all there is to it, but this includes a great deal. A mere statement in a poultry paper that you are breeding a certain variety of fowl, is not letting the people know to any good purpose. They want to know more than that. They want to know just how good your poultry is, what you have for sale, what proofs you offer that it is what you claim it is. It is a sufficient tax upon the ingenuity of any man to let all things be known so that those interested simply cannot forget what you want them to know, and we must let the people know if we expect to do business. That is certain. It is the foundation of all selling. No matter how good our chickens may be, no matter how anxious we may be to have people buy, they will not do so until they are convinced somehow that we have what they want, and that is advertising.

There are in general, two methods of advertising, first by exhibiting at the fairs and poultry shows; second, by the use of printer's ink, and in order to secure the best results, both are necessary. There are practically no other methods of letting people know, but the objection is raised, "It costs money to go to the poultry show, and to advertise in the poultry papers." I am quite well aware of this. It does cost money but there is no help for it. One must, of course, consider his financial ability, and there is such a thing as extravagance in advertising, and it is usually best for the average man to go slowly, but to say that it costs money to advertise poultry, is simply to say that the poultry fancy is a legitimate business. It is no illegitimate speculation. It is no "get rich quick," or "get rich easy" scheme. The same qualities that make for success everywhere in the business world count here also. It requires business ability. Something more than good intentions and good stock are essential. Legitimate risk must be run. It takes nerve to succeed in any line of business, in these times of fierce competition and it always requires nerve to do good advertising.

I have stated that the first method of advertising is to put your birds on exhibition at the fairs, but more especially at the poultry shows. In ordinary cases this is indispensable. It is a conspicuous way of letting the people know; though this is a matter of great importance it will not be necessary here to spend much more space upon it, though it is not usually what we mean by advertising, yet it is advertising of the truest kind.

The extent to which the showing of birds should be carried must be determined by each breeder's circumstances, by his means, by the quality of his birds, and by the amount of business he hopes to do. Some show purely for the satisfaction it gives them—for the glory, but we are writing from the commercial standpoint here, necessarily. It must be remembered that it costs a good deal of money to advertise at a show like New York or Chicago, on account of distance in many cases, on account of the high entry fee, and the expense of stopping in a large city. If one's birds are only of the average quality, it would not appear to be wise to exhibit at the largest shows, where there can be no hope of winning.

There are many minor shows where good birds are shown, and where your winnings and the score cards you receive may

do you great good. The returns are larger naturally, when one can exhibit to advantage at one of the national shows. At a recent New York show, one breeder sold \$1,600 worth of fowls; and at the last Chicago show, \$1,000 was received by one man for birds sold, and the writer is confident these figures have been largely exceeded.

There are many matters of importance connected with the exhibition of fowls, that we need not consider here, such as putting them in show condition, but there is one other matter, however, that should have careful attention, in order that one may get the best results from his showing. Cards should be printed, showing at least the variety the exhibitor breeds, and often other information, such as prices or past winnings, should be given as soon as the judge has passed upon your variety. These cards should be placed where everyone who wishes may receive one. The exhibitor should be in almost constant attendance in order to answer questions regarding his birds, and that he may make sales to intending purchasers. It is well also as soon as awards are known to have printed cards, showing winnings at the show. This is a method of advertising that combines the two general methods mentioned above.

The use of printer's ink is the chief method by which

fidently. If they are not so good as that, do not make that claim for them. Such a claim will do very little good in the end. It may bring you orders, but will not build up a good trade, and that is what you want. It is not necessary to tell others the details of your business, that is, you need not tell the whole truth, but let no statement you do not believe, appear in an advertisement. Lying in cold type is even more heinous than telling a vocal lie. Tell the truth in a striking way. The truth need not be prosaic. Nothing is so interesting as the truth, and nothing requires more ingenuity than to tell the truth in the most effective manner. A very important question that meets the advertiser at the outset is the paper or papers he shall use, and this must depend somewhat upon circumstances. What the advertiser wants is results, and he should use the papers which in his judgment are most likely to secure them. If one has only a small plant, and does not expect to do a large business, and has not the facilities for increasing his business, he should not, of course, advertise on a large basis. It is better in this case to use perhaps two papers, one which has a large national circulation, and if there is no such paper near him, the advertiser might use to advantage a smaller paper near him, in addition to the other.

W. L. FERN'S WHITE LEGHORNS

First prize cockerel, first prize hen, first prize pen at Elgin, Ill., December, 1904. Owned and bred by W. L. Fern, Elgin, Ill.

poultry advertising is to be done. This method also takes several forms: advertising in the poultry and other papers, circulars or catalogues and written letters. The use of the poultry press is the most available form of advertising, and is likely to bring the largest rewards.

Ordinarily it is not possible to do a profitable business with fancy poultry without using one or more poultry papers. Most fanciers appear to appreciate this fact, but the majority we are convinced are not making the most of their opportunities which are practically limitless. Strange to say, the first thing to do in advertising, is to tell the truth. This is necessary, not merely on moral grounds, but it is also good business policy here, as it is in the long run everywhere. Let the people know the truth about what you have to sell. The best ad is often the one that can tell the plain truth in the most simple direct way. This, with a good many professional advertisers, is the best definition of advertising.

If you think you have the best birds in the country, or if you think your birds are as good as any, say so plainly and con-

After deciding carefully the advertising mediums, it is essential that they be given a fair trial. Persistence is necessary to success everywhere, and in no field is the necessity more absolute than in advertising.

Advertising is like seed sowing. You must frequently wait patiently for returns. The trouble with beginners is that they usually expect to reap the harvest as soon as the seed is placed in the ground. Put yourself in the place of the man whom you hope to reach. You know that you would hesitate, at least, about buying from a new advertiser of whom you never heard before. This is perfectly natural. It is only after you have become familiar with the man's name and his claims and the proofs of quality furnished by the show room or otherwise, that you are likely to purchase anything from him. There are exceptions, of course. Occasionally a man succeeds in securing large returns almost at the start but you must not depend upon repeating these exceptional experiences. "It is dogged persistence that does it."

[CONTINUED IN OCTOBER NUMBER.]

American Poultry Journal

Issued the first of each month.
Published by

AMERICAN POULTRY JOURNAL PUB. CO.

GEO. G. BATES, Pres.
325 Dearborn St., Chicago, Ill.

GEO. G. BATES, Editor.

THOS. F. RIGG, Associate Editor.

J. W. BELL, Associate Editor.

Subscription 50 Cents a Year—5 Cents a Copy of all
Newsdealers. Chicago subscriptions 60 cents (when
delivered by carriers). Foreign subscriptions \$1.00.

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the JOURNAL at the expiration of the time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

35,000 A. P. J.'s for September, 1905.

State of Illinois, County of Cook, ss.

Chicago, Aug. 24, 1905.

James W. Bell, manager of the Recorder Publishing Company, Chicago, being duly sworn, certifies that the American Poultry Journal has contracted for printing and binding thirty-five thousand copies of the September, 1905, issue.

JAMES W. BELL.

Subscribed and sworn to before me this 24th day of August, 1905.

BLANCHE ELDER EDDY,
Notary Public.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Light Wanted.

The dreaded malady commonly known as "going light" is what delvers in hen lore term with scientific exactness, tuberculosis. Tuberculosis is very deadly and multiplies rapidly when the flocks are housed in damp rooms, cold, ill smelling basements and underground hen-houses. It takes but a short time for tuberculosis to get its fangs deeply rooted in a fowl's lungs. The only cure is prevention. Prevention means fresh air, sunlight and clean quarters where odors never meet one on entering the door. If cows can convey tuberculosis through their milk to consumers of it, why not the hen? Some of the investigators could well turn attention to this topic. Of course the general farm hen whose cover is the blue canopy of heaven and whose shelter is a barbed-wire fence does not have tuber-

culosis; she cannot afford the luxury nor could she have it. The fresh air is a repellant; and besides, she needs her strength to fight the daily battles that confront her forages for waste grains. Tuberculosis is not an every day or every flock disease but there is plenty of it about nevertheless. It should have as thorough investigation as the dreaded roup.

Essay on Quitters.

There are a few classes of Quitters in the realm of the fancy which it would be well to enumerate before entering into a further discussion of their likes and dislikes. The Quitter stands out prominently; then comes the Knocking Quitter, the Quitter who let discouragements stop him, the Quitter whose money gave out, and the moneyed Quitter. There must be a standard, illustrated we think, among the old books in our unused library for the classification and searing of Quitters. We have seen it recently but now cannot lay strong hands on it. Of all the Quitters, the Knocking species is the worst, speaking scientifically. His brain-pan has been scorched by rapid thinking and he has no more thoughts coming. His cerebro-spinal nerve is full of unnecessary twists and cross fires greatly with the pneumo-gastric nerve. Once he begins Knocking he hammers loudly and wants all who enter the ranks to hear the gentle (?) tinkle of his voice. He carries hammers around for other Knockers and at times will use them for one entirely without charge! His repertoire of vicious knocks is overflowing and no matter what sized audience greets him, he will knock the business till the listeners are none. Fanciers should pity the Knocking Quitter, and do their best to bolster up the others who chance to be near them. It is well for the discouraged Quitter that he stopped as soon as he did; the moneyed Quitter would never have made a success even if let to run the race to the end, this because he does not have to succeed with poultry; and the Quitter whose money gave out—he would overlook that our best breeders started on a small plan and made the hens do the earning! Pity him, also. But lookout for the Knocking Quitter! Polish up your armor and put in new rivets where needed; ward him off; let not his hammering dent your enthusiasm.

Trying Out.

There is a game chicken farm up in sunny, breezy Michigan, where every year at a certain season the fighters are allowed a go at each other—thus only the best survive and are bred from. It might aptly be termed a "trying out." And each show season sees the "trying out" process get a whack among poultrymen. Not all of us may be Belascos, Barrymores, Mansfields—in the fancy. Some have to sing in the chorus; others are property-men; some lead the ballet, and a few are at the center of the stage and generally in the gleam and shimmer of the foot and spot-lights. Earnestness, a righteous enthusiasm, a capacity for hard work—these are generally the characteristics that be plainest in the man who wins in the annual try-outs. If we lag 'mongst our labors, and these pile up until we cannot see over them, then we lose courage, and enthusiasm dies. The winner in the try-out faints not when the

duties of hedom present themselves. Constant try-outs make strength of character. By first mastering the small we gradually enlarge our capacities until "mountains appear as mole-hills." The small try-out makes us eager for the next one—and the path is strewn with them until we attain the top in our line. If we are game we win—if "punk" we lose. Are you preparing for the show room try-outs this season?

Ducks Can Lay Too.

The Australian Hen is an enterprising poultry journal and recently it started a ducks' egg laying competition. During twelve months from July, 1904, to June, 1905, inclusive, a pen of Buff Orpington ducks laid 1,326 eggs, there being six ducks in the pen. Twenty competitors and the public expected to see the Indian Runners win the test easily. The Runners did, however, win the highest average number of eggs in the year as a breed. The penning and feeding were such that any breeder could reproduce, and extreme care was exercised in the records kept. Blue Japanese, Rouens, Pekins, Runners, Orpingtons and Muscovies competed. Runners won the second prize with 1,315 eggs to their credit. This win of the Orpingtons has done much to boom them in their stronghold—Australia. We should have some educational tests like these at the various colleges of agriculture throughout the country. We have the birds and facilities; and the way is plain.

Pet Theories.

Where is the man who broke into print not so long ago, telling fanciers to place our ear near the left side of the hen as she was on the roost and that by listening closely we could hear the dull crunch, crunch of the gizzard as that organ performed its work? Our friend and fancier's exponent, Dr. E. W. Sanborn, who hails from near the seat of eastern learning, now comes forward saying that the gizzard is not to use in food grinding, and that all the food is assimilated by digestive juices peculiar to the hen. He says grit is necessary as a food—that is why the hens eat it. We cannot contradict either statement nor support them publicly but we rather incline towards what we have been taught, nevertheless! Howsoever all this is, the hen goes marching on.

Two Editorialesettes.

There was once a man who felt the value of sincerity about everything he did; and one day he became greatly interested in pure-bred fowls to such extent that he bought a breeding pen of them at a price nigh unto ten, big dollars. He hardly understood why they were worth more than ordinary hens when he bought them but his fancy ran riot and stampeded his purse. When he had them safely and comfortably housed he began to look into the why of big price—it was very big to him! He saw others buy birds for large sums and he intelligently studied the subject with a view to growing a few good birds himself. He began to see through the proposition and determined to invest something in a "sinking fund" if he found the basis of the pure-bred poultry in-

dustry on a rock bottom. He investigated; and saw quicksands, and dark looking pools in the sides of the channel to solid bottom. Poultry is ever a necessity; better poultry is a greater, he found. He discovered that quality has a large time in the fork that supplies demand—or makes it, rather. He found that showing would let most of the breeders know the quality of stock he was breeding; and that sane advertising would let more of them hear about it. He has endeavored in the last ten years to follow out the simple principles first discovered and today they place him first in his class. He placed a goodly amount of sincerity in his work and was rewarded accordingly. Sincerity makes friends, builds business, conquers weak and strong dangers, overcomes the element of doubt and proves a fancier to be a fancier. Loblolly and eternal bickering that keeps one hid from the goal of success should be ordered to the rear by true sincerity. When the goal is obscured the path is harder to travel and we easily get lost in confusion. More sincerity will lighten up the way; it always makes a more earnestness of purpose.

The other man we shall mention in this editorialette wondered how he could build up a better business in a state where but four or five shows were held yearly. He was too far from good shows to exhibit; and those about the home state were of no great importance and he did not derive enough business from them to suit himself. He sold a few hundred dollar's worth of birds and eggs annually and longed for a bigger business. The question was how to build up a larger interest in his state in pure-bred fowls. All this was five sweltering summers ago! He induced the superintendent of poultry at the big state fair to revise the list and offer bigger premiums, which drew twice as many birds as before. It resulted in creating quite an interest and the agricultural papers praised the big display. The breeders of surrounding states as well as local fanciers were urged to show their birds and compete against the hucksters for the prizes. And they discouraged these fellows coming further! The prizes on "best pair fowls, pair chicks," were discontinued and prizes on cocks, cockerels, hens, pullets and pens took their places. Then a state association was formed and our hero was instrumental in that though he held no office. This brought bigger exhibits than ever and by boosting one, boosting all, the association got things going lively. Local associations have sprung up and they hold their shows early and the state show late to accommodate all. There is a \$2,000 yearly business now staring the hero in the face this season—and all because he boosted, boosted hard, boosted long and all the time. He has done more than any ten men to make the poultry industry that the state boasts today but he is well paid. He had to create a demand; make a market by interesting and holding the public's attention. He made a good business

for others but builded well for himself, like the man whose ennobling influence goes to build up his personal character.

And this shows what some have to contend with! Are your difficulties as huge as his? Does the field you are working in need as much cultivation or is it ready for good seed?

Working conscientiously did the trick, eh?

A California store has opened the window campaign with a a brooder full of young quail. I guess the competitors will be kept busy now; eh?

Five thousand White Wyandotte eggs comprise the biggest order ever given to a poultry fancier. Mr. James J. Riley, of Montreal, gave this order to John S. Martin, Port Dover, Canada. The former has been studying the business and taken an extended course in the Guelph College of poultry culture prior to establishing a big farm for the production of eggs and fowls for market. If there was ever a bigger egg order we do not know of it.

* * *

South Africa, Australia, France, England, New Zealand, Germany, Russia, Italy and America have their poultry shows, yet here comes "little Doris" in the hood of Honolulu, creeping in on all fours wanting a place in the tent. This tawny island holds her first show the coming winter. She's welcomed into the fold.

* * *

Mr. H. A. Nourse takes the active editorial charge of the *Poultry Herald* after the first of this month. Mr. E. W. Rankin, the former editor, is too busy to handle this work as his time is largely devoted to *The Farmer*, published by the same concern. We extend Mr. Nourse every good wish.

* * *

The English press are using many illustrations of famous New York, Boston and other winners on their covers and for frontispieces. *Poultry* recently used a drawing of D. W. Young's first Boston Single Comb White Leghorn cock on its title page and the sketch made a tasty appearance, indeed. Geo. H. North-up's famous Rose Comb Black Minorca was used similarly and the editorial comment commended the Americans as breeders and exhibitors. The quality of birds shown yearly at New York, Boston, Chicago, Johnston, Trenton, Cincinnati, Indianapolis, Lincoln and Denver, not omitting Topeka, is very high and compared favorably with any in the world.

* * *

We greatly regret to chronicle the death of Mr. Harry Graves, of Higganum, Conn., whose demise on July 30, 1905, leaves many friends in mourning. Mr. Graves made his mark at one master exhibition of his White Rocks and the fancier of these birds in the East will miss him during the coming season.

Some of the Foremost Poultry Judges in America Have Pronounced my Catalogue of

AMERICA'S "BIG FOUR"

The neatest, most complete and business-like gotten up catalogue they have ever received. I use trap nests exclusively and know the ancestry as well as the unprofitable layers. Will send catalogue free to all who mention American Poultry Journal.

H. P. RANKIN

Box 61, Hartington, Neb.

Moulting fowls give a languid appearance to the poultry yard. The hens stop laying and mope listlessly about. Even the cocks are indifferent and taken altogether they're a ragged, lazy looking set. The poultryman's profits drop to the minimum while he waits for his fowls to get busy.

Moulting is necessary to the fowl's welfare—it's a time when Nature restores the birds to their full vigor and strength.

You can hasten the process and shorten the period of non-productiveness by supplying Nature with the elements needed to reinvigorate your fowls, by feeding

O-K Poultry Food

They need bracing up. They need help. Give them food that will create fresh vitality, renewed vigor and strength, that will give energy, and you will set Biddy to manufacturing fresh eggs in a much shorter time and at a rapid rate. They should have a conditioner that will tone up the system, make new, rich blood, and put fresh activity into the whole system. They need a food like

O-K-POULTRY FOOD

something that will put them on a profit producing basis. O. K. Poultry Food is a pure guaranteed conditioner—furnishes the needed elements for putting the egg-making organs in perfect condition. Aids digestion, restores health, vigor, vitality; keeps fowls lively and strong. A disease preventive that also cures Gapes, Pip, Roup, Cholera and Leg Weakness.

It will pay you to give O. K. Poultry Food a test during moulting time and see how fast the pale combs grow red; see the fluff fill out and the trim sprightliness—sure signs that there will be plenty of eggs in the nests before long. Sold by dealers. If they can not supply you, order from us direct. Send for free circular.

O-K-Stock Food Co.

408 Dearborn St., Chicago

W

has recently been organized there to "can" eggs. All the "poor" and "mediums" in the country are to be run through a test and the bad separated from the good (?). Churning processes make the added eggs ready for canning.

Will Purdy breaks loose again in *Poultry*, our English cousin, and tells its readers some really interesting information. He is down in Texas where the chicken industry is greatly different than in England. He smiles rightly at the American system of judging a fowl's shape when it is in the hand of the judge! There is too much of this done every season. A bird's shape should be scored and deductions made before it is taken from the coop when its whole carriage can be clearly seen. The new

Standard will help out on this wonderfully as then the ideal will remain permanent, its elasticity gone forever.

Poultry News, formerly at New Brunswick, N. J., has been removed to Newark, N. J. Mr. Paul F. Williams has formed a partnership with Mr. John Engel, Jr., who will act as editor and manager. There is a good field around Newark, N. J. The vicinity abounds in poultry farms and fanciers, so there is plenty of room for enterprise.

Judging by the reports received from all sections of the country this has been a fairly good season for the rearing of fowls and the amount of stock that will be available for breeding and exhibition purposes will be above that of the past

two seasons. The quality, so far as we have been able to learn, is above the average for this season of the year. From the way that inquiries are coming in to some of the breeders for exhibition specimens we believe this is going to be the banner year for this class of stock. The demand for market poultry is good, and prices have been high all season. The demand for strictly fresh eggs is away beyond the supply, and egg farmers have been reaping a harvest during the past year. Commission men here in Chicago inform us that it is almost impossible to get strictly fresh eggs, at any price, on the Chicago, Minneapolis or Kansas City markets. All this goes to show that the poultry business was never in a more prosperous condition than at the present time.

Keep the drinking vessels clean and sweet at all times, and especially so during the summer months.

—o—

THE SEASON'S CROP.

We have received a large number of reports from our advertisers as to their success in hatching and raising chicks this season. The majority of these report splendid success in rearing, but a great many have had difficulty in getting the chicks out of the shell, especially during the early part of the season.

Geo. H. Burgott, Lawtons, N. Y., breeder of S. C. Brown Leghorns, reports 340 chicks on hand, with 500 eggs to hear from.

L. B. Jennings & Son, Polk City, Iowa, breeders of all standard varieties, have 6,000 chicks coming along nicely.

H. A. Emmel, Mars, Pa., breeder of Light Brahmas, S. C. Buff Orpingtons and S. C. Brown Leghorns, has 500 very promising youngsters with which to fill orders the coming season.

Thos. F. Rigg, Iowa Falls, Iowa, the noted Houdan breeder, reports 923 White Wyandotte and Houdan chicks of unusual good quality.

J. E. R. Chilton, Dallas, Texas, the Black Langshan specialist, reports a fine lot of very early hatched chicks, which are rapidly approaching maturity.

Geo. W. Mitchell, Bristol, Conn., the well-known Partridge Cochins breeder, has about 150 very promising youngsters.

John Culbert, Braceville, Ill., has 500 very promising Barred Plymouth Rock chicks with which to fill orders the coming season.

Dr. C. M. Baskerville, Mt. Pleasant, Mich., the Partridge Wyandotte spe-

A Piano Box Will Do

Last month we announced something new in the brooder line and the number of inquiries we received is both particularly gratifying and evident we have put before the poultry raisers something they have felt urgent need of and something they will appreciate.

This month we have still another good thing to offer which we are equally enthusiastic over because of its unlimited utility and adaptability. We feel certain every one interested in poultry culture will hail with delight this novel hover.

Because of its wide range of usefulness we have named it the Prairie State Universal Hover, and if it had no other unusually advantageous feature this fact alone is sufficient to commend it as being far preferable to all other hovers now on the market.

THINK OF IT.

A hover you can use anywhere on anything in the form of a poultry house, from an organ or piano box to the most expensive colony house and at the same time depend upon it doing far better work. There is practically no limit to its adaptability and its construction is such that it can easily be attached.

It can be quickly removed from one house, box, building, or whatever it is attached to, to another after the brood has been given sufficient

start and thus utilized for a new brood. In this way it can be used to accomplish the work of four or five ordinary stationary hovers.

But this is only one of its economical features. In the matter of oil it is especially good. The fact that a small No. 2 Sun Hinge Burner will furnish adequate heat in the coldest weather is proof sufficient. In the matter of care, being fitted with a good regulator and thermometer, the time in maintaining even and correct temperature is reduced to the very lowest.

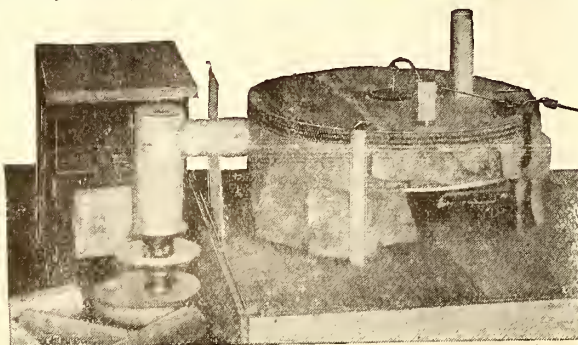

Any one can attach this hover. All that is necessary is to cut a hole in the house 6 x 11, put the hover inside and connect the lamp on the outside, and it is ready for use.

The lamp being on the outside it is convenient to get at to regulate and fill. It is fitted with a metallic chimney seven inches long, which insures steady, clear flame and heat. Around this is a fresh air pipe through which fresh air slightly warmed is supplied to the upper part of the brooder, then diffused downward through the felt curtains, furnishing a perfect system of ventilation.

We have subjected this hover to tests that were more severe than could ever be possible in regular use, and it proved thoroughly efficient. We wanted to be doubly sure that it would give perfect satisfaction under the most trying condition, and we were surprised how capably it did its work. We know you will appreciate it when you know its real merit, and request that you send right now for free circular giving full description.

THE PRAIRIE STATE INCUBATOR CO.

Box 468, Homer City, Pa.

cialist, reports 129 very promising youngsters.

D. T. Heimlich, Jacksonville, Ill., breeder of Barred and White Plymouth Rocks and White Wyandottes, has 675 youngsters of these three popular varieties.

G. H. Kinzel, Winchester, Va., breeder of S. C. W. Leghorns, White Wyandottes and R. C. R. I. Reds, has 621 very promising youngsters of these three varieties.

Joe Farmer, Flushing, Ohio, breeder of Barred Plymouths, has about 700 choice youngsters to dispose of. Owing to poor health, Mr. Farmer has decided to sell his entire business. This is a good opening for any one who desires to get a well established business at a reasonable price.

Henry T. Reed, Camp Point, Ill., the light Brahma specialist, has 200 choice young birds for the season's trade.

E. E. Vanatta, Vandalia, Mo., breeds S. C. W. Leghorns exclusively, reports that he has 1,100 fine youngsters, 248 of this number being sold at the time he wrote us.

Mrs. T. F. Leonard, Mt. Sterling, Ohio, breeds White Wyandottes, and has 275 very promising youngsters with which to fill orders.

F. S. & J. S. Gasper, Rudolph, Ohio, breeders of Barred and Buff Rocks and White Wyandottes, report that eggs hatched exceptionally well this season, and they now have about 500 fine youngsters on hand.

Geo. O. Anderson, Rushville, Ind., breeder of Barred Plymouth Rocks and Light Brahmas, reports 400 head of choice young stock for the season's trade.

Charles Benington, W. Burlington, N. Y., breeder of S. C. Buff Orpingtons, will have about 250 birds from which to fill orders.

T. R. McDonald, Winchester, Ky., breeder of White Plymouth Rocks, reports 300 young birds from which to make selections.

C. N. Hansen, Warsaw, Ky., breeder of R. I. Reds, has 500 head of young stock with which to supply his customers.

Edgar Poultry and Egg Farm, Richwood, Ohio, breeders of S. C. W. Leghorns, White Wyandottes and W. P. Rocks, reports 1,750 chicks of these three varieties.

H. O. Sears, Garden Prairie, Ill., breeder of Barred Plymouth Rocks exclusively, has 220 choice young birds as a result of his season's work.

A. Edward Green, Morgan Park, Ill., breeder of Buff Orpingtons, Buff Wyandottes and R. C. B. Leghorns, reports about 200 chicks of these three varieties.

Mrs. Tilla Leach, Cheneyville, Ill., reports about 200 fine Barred Plymouth Rock chicks from which to fill orders the coming season.

E. H. Gaines, Gaffney, S. C., has 275 nice White Plymouth Rock chicks which are rapidly approaching maturity.

F. Whaley, Cameron, Mo., breeder of Buff Plymouth Rocks, reports 252 strong, healthy chicks for his season's trade.

J. C. Fishel & Son, Hope, Ind., breeders of White Wyandottes exclusively,

has 1,000 choice youngsters as a result of their season's labor.

O. E. Michael, Dayton, Ohio, breeder of S. C. Brown Leghorns, reports excellent results in hatching and rearing his favorites this season, and now has a fine lot of young stock with which to fill orders.

A. H. Asche, Princeton, Ill., breeder of White and Black Langshans, says he is well prepared to fill orders for these varieties the coming season.

Wilber Bros., Petros, Tenn., breeders of S. C. White Leghorns, reports 515 fine young chicks that are rapidly rounding into shape for shipment.

D. S. Lovejoy, Elgin, Ill., breeder of Buff Cochins and Partridge Wyandottes, reports good success with his chicks this season.

W. C. Brookover, Carlwick, Ohio, breeder of Silver and White Wyandottes, has about 400 chicks of these two varieties for the season's trade.

W. H. Harrison, Jr., Toledo, Iowa, breeder of Partridge Cochins, reports 100 choice young birds as a result of this season's work in the poultry yard. Mr. Harrison says this is 40 more than he desires for the trade, but he enjoys eating a Partridge Cochin when they weigh three pounds or better.

C. P. Nettleton, Shelton, Conn., the Light Brahma specialist, reports 150 young birds to select from the coming season.

KANSAS LAYING CONTEST.

Nine months of the Kansas State Laying Contest, ended August 1, 1905, with the birds as follows:

Study Fence Construction

Construction is important. Advance Fence is made with a continuous stay—thus preserving and utilizing all the strength of the wire, about half of which is wasted in fences with cut stays. Consider this and you will understand why Advance is stronger. Advance Fence has the most perfect provision for expansion and contraction. Advance stays do not slip. We use only the best grade of galvanized steel wire.

We sell on 30 days' free trial. If you don't like Advance Fence, and if it is not exactly as represented in every way, return it to us at our expense and get your money back.

Why not deal directly with the manufacturer and get wholesale prices? We pay freight to your station and guarantee safe delivery.

KEEPING HISTORY CORRECT.

Editor AMERICAN POULTRY JOURNAL:

I have been reading your article on Light Brahmas in A. P. J. There is one statement which I don't think quite right; that is, where you say in regard to Cochins shape of the Light Brahmas that the west will have none of it.

I know there have been in the past Cochins-shaped Light Brahmas shown in the east, notably at Boston, but at the present, or for some time, none are to be seen in the east, at least at our most important shows. On the contrary, at the St. Louis exposition last October I was surprised to see the squatty, Cochins-shaped Light Brahmas shown by your western breeders. I went to St. Louis expecting to see some choice Light Brahmas, but was sadly disappointed.

One western breeder who advertises choice Light Brahmas at long figures, had several birds at St. Louis, but not a single bird that I could call Brahma shape. To say that I was sadly surprised at the show of Light Brahmas by your western breeder don't begin to express my disappointment. I could not understand how it was that your western breeders showed no better birds.

I am sure the Light Brahma breeders of New England have been sending as good birds as they have into the west and how it was that your people did not show better birds at St. Louis I could not understand.

A Massachusetts man who knows a Brahma, although not a Brahma breeder now, came down the Brahma aisle and seeing me there made the remark that there was hardly a bird, with a very few exceptions, fit to show at New York or Boston. I like the cut of the male bird in A. P. J. for August. He stands up on his legs and has a good, even balance of body. C. P. NETTLETON.

Shelton, Conn.

[We think that if Mr. Nettleton will again read the article referred to he will be convinced that our statement was one of fact. We were not making a comparison as between the merits of the Light Brahmas of the west and the Light Brahmas of the east, as a whole.

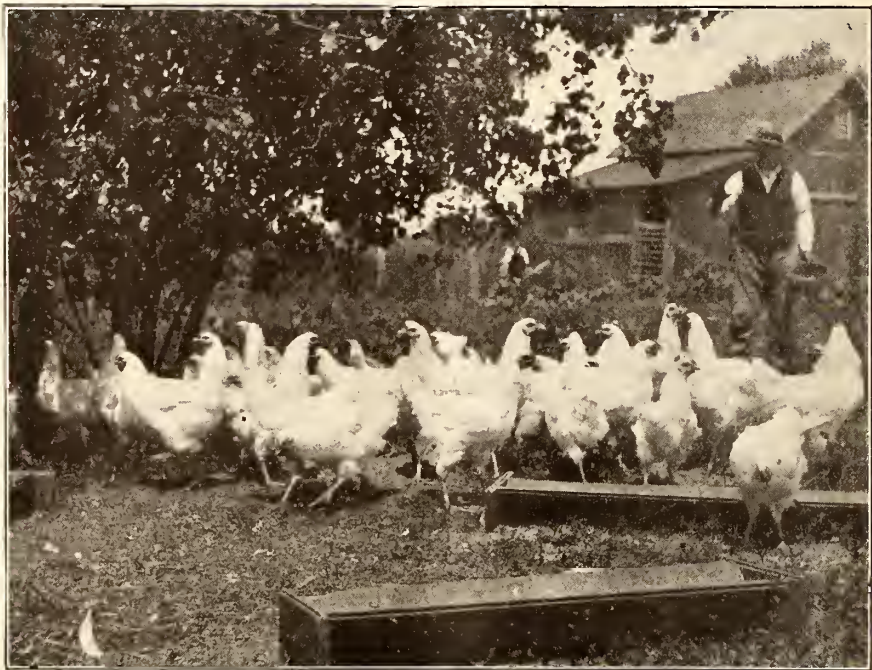

What we did say was that the western breeders have not taken kindly to Cochinsized Light Brahma, "shown in the east, notably at Boston." As a correct historian we also said that the Cochinsized Light Brahma is a product

of the east.

Wishing to be absolutely correct we further said that "Mr. Felch and Mr. Williams and other good friends of the Light Brahma" have opposed this Cochinsizing of the Brahma. Mr. Nettleton is among the "other good friends" who have adhered closely to the true Brahma type in breeding operations. In our write-up of eastern shows in these columns we have found pleasure in giving Mr. Nettleton's Light Brahmas high praise, and upon one occasion complimented him upon his good judgment in

In his circular Mr. Nettleton says:

"Look over the Light Brahma history from Burman's time to about 1890; look at pictures of Brahmas bred by such breeders as Burman, Plaisted, Comey, Felch, Williams, in years long past. You will not find one that shows that squatty, uncertain balance of body and legs, that decided tendency to Cochins shape, which for some unaccountable reason has often been seen in the show room within the last few years. If we keep out Cochins shape and want large, heavy birds, we must have good length of body, well set on

A bunch of cockerels on the farm of Clement & Fike, Libertyville, Ill. These cockerels were hatched February 7, 1905, and photographed July 9, 1905. Many of these birds are now up to standard weight.

refusing to deviate from the correct Brahma type in his breeding.

It would seem to appear that while on his trip west Mr. Nettleton did not see enough Light Brahmas to enable him to pass correct judgment upon the western Light Brahmas as a whole, and that he is judging the many by the few he saw at St. Louis. Regardless of the quality of the stock shown at St. Louis this is not fair to the western breeders.

straight, strong legs, also of good length."

That's the idea. It is the "Cochins-shaped Light Brahmas shown in the east, notably at Boston," that the western breeders, almost to a man, refused to accept. We are pleased to be able to state that the true type of Light Brahma has not been rejected by a majority of the eastern breeders.—THOS. F. RIGG.]

CLEMENT & FIKE'S White Wyandottes

==GREATEST STRAIN ON EARTH==

Have for years won the best and creamy prizes at the largest shows in the world. At Chicago, 1903 and 1904, our birds won five 1sts, five 2ds, four 3ds and **Special First Prize** for best display White Wyandottes and best display Wyandottes any variety. At World's Fair, St. Louis, 1st cock, 7th cock, 4th pen, 3d display and special \$50.00 silver cup. At Chicago Show, Jan., 1905, birds of our breeding, in hands of our customers won about all best prizes, including **two firsts**. These winnings places our strain **greatest on earth**.

HOW NOT TO RAISE POULTRY.

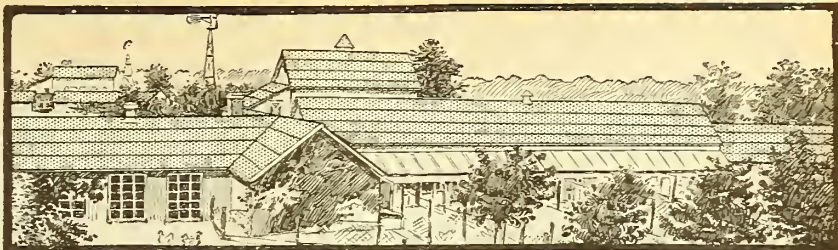

"I think I might head this article 'How Not to Raise Poultry,' for it has occurred to me that a recapitulation of my efforts of seven years ago may serve as a beacon for some young beginners.

Well, seven years ago the possibilities of the poultry raising industry began to force themselves on my notice. My business at that time was to solicit life insurance, and in the course of canvassing I ran across a brush manufacturer in a Canadian city, who combined poultry raising with his brush making. He was agent for a certain incubator, prepared poultry food and other poultry supplies. In the back room adjoining his shop, he always had three or four hatches of chicks scratching away in brooders, which, at the right age, he would transfer to a poultry farm of seven or eight acres which he owned in the suburbs of Montreal. I don't mind giving a clue to his whereabouts, as I remember him very kindly; a genial fellow, with a continually happy smile and a good word, and also a good business man, so good that he had the ability to steer clear of a life insurance agent and interest him in the poultry business. Silver Penciled Wyandottes were his hobby, with Barred Plymouths for second choice. He was also a judge of poultry, and in demand at many shows.

My place in the suburbs of Montreal consisted of about one acre of ground, on which was a good ten-room house, and a stable about fifteen feet long by eight feet wide, and some twelve feet high, with storage space across the beams at the height of about seven feet. There was only one window, about 2 feet square, on the north side, and the door was also on the north side, offering easy access for the hurricanes which swept across the River St. Lawrence in winter time at that point. I divided the shed with a rough plank partition, put in some rough tree branches for perches, fixed up some soap boxes for the receipt of the expected eggs, put in a couple more windows, about the same size as the one already in, threw some sifted ashes on the floor, whitewashed the whole inside, and considered the place an ideal one for raising poultry. But even with the added windows, the place was still gloomy, and I found that two immense trees near at hand deprived us of the sun's rays in winter, when they were most needed.

However, my first investment was a trio of Buff Cochins, bought from my neighbor across the road. Putting two settings of eggs under two hens, I was delighted to see them bring out twenty-four chicks. Next, a few common setting hens were bought from passing farmers, and underneath these hens we put forty-five eggs from my friend's Silver Wyandottes. These hatched out splendidly, and some of the birds promised to be fine specimens. Then we obtained a setting of duck eggs, and by and by a pond was made for the ducks, water being supplied through a rubber hose from the house water pipes, and the pond itself consisting of a long wooden box with caulked seams.

All this was started in the early part of the year, and at the end of the hatching season we had about thirty old birds and over a hundred chicks. During the summer time we had the hens

HERE'S A PAROID ROOF,

"The Roof That Lasts."

The Monmouth Poultry Farm, Freneau, N. J., one of the largest in the country, sends a photograph (see above) showing their Paroid roofs. They like it and so do thousands of poultrymen, the large ones and the small ones, because they found that for roofing and siding, nothing in the world equals

PAROID ROOFING.

Economical, durable, extra strong, light slate color—contains no tar—does not run nor crack—does not taint rain water. Any one can lay it. Keeps buildings of all kinds warm and dry; spark, water, heat, cold, acid and gas proof, in short it's just the roof you're looking for. Now, don't be put off with a poor imitation, but

Phoenix Poultry Plant

I am ready to offer you a bargain in the Phoenix Poultry Plant, our stock, good will and trade. Having sold our milling business here we must make a change. I will consider an exchange for a good mill property,

MRS. J. H. OREBAUGH
Batavia, Ohio

cooped up outside with their respective families, while the layers had a good sized run to themselves and the half of the shed which was partitioned off. The little chicks seemed to get along all right for a while, and then the troubles came thick and fast. When one hatch was old enough to let loose with the hen, the first catastrophe was a wholesale drowning in the duck pond. Instead of confining the ducks, we confined the chicks, thinking that when they got a little older, they would not be foolish enough to go and drown themselves, but that is just what they did do when we let them out a second time, therefore the ducks had to go. Such a thing as fencing the ducks in, did not occur to us. Then some of the chicks began to get sick, and we thought their drinking vessels were not what they should be, so we changed from shallow tin pans to earthenware cups, ordinary tea cups without handles, of which we had several in the house. The next morning after using these, each contained a chick with its feet sticking up and its head sticking down—drowned to perfection—and only in one or two cases did the cup upset and allow the chick to escape.

Then, a friend, through mistaken kindness, gave me a thoroughbred fox terrier pup about three months old. The pup was tied in the shed, and had the partition between him and the chickens, but a rope didn't mean very much to him. He lay right down and started to chew that rope, and before morning he was a free pup. This was in the beginning of the winter, and in the other half of the shed from where the pup was nearly a hundred head of poultry were suffering in a space sufficient for an ordinary breeding pen. The pup forced his way between the partition boards during the night, and when I found him in the morning he was gnawing at the inside of one of the choicest Wyandottes, while the dead were strewn around him. He promptly received a bullet in the ear.

For feed, we used oats, buckwheat and whole corn, with such scraps from the kitchen as we had. We fed them as much as they would eat three times a day, and came into the following spring with about six hens laying. The Buff Cochins were the laziest birds I ever had to do with, not that I ever had much experience before, and it may have been due to feeding, for, as I have just said, we fed them all they could eat, and sometimes they would leave some on the ground until next morning. Another mistake was, that they had no scratching box, and the lack of exercise during the cold weather made them fat and lazy in the spring. The Buff Cochins wanted to sit all the time, while the Silver Penciled Wyandottes were too fat to be good layers. Many of the latter died with roup and bowel trouble, and the best bird of all was a Barred Plymouth Rock hen. This hen endured all the hardships of that awful shed during a severe winter, laid more eggs and had less sickness than any of the others, and now I pin my faith to the Barred Plymouth Rocks.

Therefore, after selling out my poultry stock after twelve months' experience, I got back exactly the amount of my original investment and felt heartily sick of the whole business.

However, here we are again at the end of seven years, during which time

we have moved down to Pennsylvania, where the St. Lawrence blizzards do not get a chance to blow the inside out of chicken houses, and under more promising conditions, I have again started to raise poultry—Barred Plymouth Rocks this time—but just as to how I succeed will be part of another story.

One thing I must say in conclusion, and that is, I have learned a whole lot from the AMERICAN POULTRY JOURNAL, and am still learning from it; moreover, I begin to scan it eagerly for new ideas, as soon as it comes in.

GEORGE V. SELLEN.

Abington, Pa.

A MIDSUMMER FAIR.

Such a fair is not often undertaken in America. The one, however, held at Lake Geneva, Wis., July 13 and 14, 1905, was an event of much importance. While fowls at this season are not always in first-class feather they nevertheless show what quality they have had and will again have after molting. Chicks were nearly all rather young, yet in some of the classes very promising for development into first quality exhibition stock for fall and winter exhibits. When 426 head can be brought out in July by 45 breeders, showing 48 varieties, we may look forward to the time when such exhibits become more frequent. Under the superintendency of Mr. and Mrs. Henry Bartholomay, of Chicago, whose summer home is on the highest point midway of the length of this beautiful lake, the local members of the Lake Geneva Poultry Association were of valuable assistance in making this most attractive department of the Summer Fair a success. They furnished uniform coops. The exhibit was held under a large tent, as all other exhibits of flowers, vegetables, stock and other displays. This fair was attended by upward of 10,000 people, who came from far and near; was spread over the beautiful grounds owned by the Leiter estate; its object was to help raise funds that went to benevolent associations of Chicago to give the city children outings. Certainly a worthy cause that gives enjoyment to all, the giver and those who receive.

D. T. HEIMLICH.

Feed troughs should be scalded frequently and set in the sun to air.

LEE'S**LICE KILLER**

strongest and best. No handling, dusting, dipping or greasing. No trouble with vermin if you use Lee's—the name insures quality. Price, qt. 35c; ½ gal. 60c; gal. \$1. Sold by dealers in every state.

GERMOZONE

cures Chicken Cholera, Bowel Complaint, Sore head, Roup—the best chicken medicine. Profits are in healthy chicks. Save the chicks—Increase your profits. Germozone will do it. Price 50 cents, postpaid. Send for new poultry book containing calendar and egg record and lots of valuable information.

GEO. H. LEE COMPANY
Box 91 Omaha, Neb.

FREE READING NOTICES.

I notice in a number of poultry papers that a publishers' association has been formed and that among other improvements for the good of the profession they are going to "sit down on" free reading notices.

I feel like singing the old time war song, "Brave Boys That Come at Their Country's Call." Let us all rise and sing, and make it long metre, too, at that; the longer the better.

Queer, isn't it? That an advertiser himself will get so reckless as to speak up in meetin' like this, but I'll tell you how it is. I believe now and have believed for several years, that those who read also think, and that the deceptive free reading notice fools but few; that is, we all know it by the ear-mark. But that they are advertising none disputes, and being advertising, and over the advertiser's own signature. In other words, why do honest advertisers adopt deceptive methods?

Speaking for myself, will say that I have passed through several stages in advertising, and as in other things, some of our first impressions last the longest. I remember a particular instance in the early stages of my incubator experience wherein I contracted for the insertion of my advertisement in a paper that did, and does, charge too much. Money was scarce, and I wanted that ad to help me get started. In that same issue and in the adjoining column there was a free reading notice so smooth in construction that it robbed my paid-for ad entirely. I protested to the publisher. "Will do as well or better for you, Johnson," was the answer, and I am here to say that he made his word good.

From that day to this, except for one season, my advertising has had the free reading notice nonsense attachment simply because it was the rule and others did it, and I believe right now that I am voicing the sentiment of the great majority of advertisers.

The season I mention as an exception was the spring of 1923, for that season I turned the free reading notices down, as most publishers will remember. I not only turned them down, but uncovered their deceptions in my catalogue writing. I sold over 20,000 incubators and brooders that season, which I verily believe led all other concerns up to that time, and without or in advance of the declaration of the poultry press association notice, I turned them down for this coming season, as most publishers can verify.

The plan for charging for a stipulated space at a stipulated price, and throwing in a promiscuous unknown quantity never did appeal to me as rational. Publishers in most instances, and in self defense, run the humbug free reading notice in small type. Of course, we know them by that and by other ear-marks. They are harmless in one way of looking at it; in another way they are an imposition on our sense of knowing a little at least.

Why not an advertisement stand on its own feet? Why not make it definite, and at a definite price? I met a publisher one time, he is not a publisher now; says I: "Mr. —, how is it that the — Incubator Company have more free space than they pay for in regular space?" "Well, sir, Johnson," says he, "if I published even one-half they sent me I would

have to make my paper larger." An admission right there that persistence in sending them won out even though half of them went to the waste basket.

I contend that if a manufacturer wants a write-up and that if his business will stand investigation, that the proper and honest way is to pay the publisher for investigating and making the write-up according to his findings and so state it in connection. Call it advertising, which it is, collect payment according to the space used and the time occupied, etc.

Buying advertising space and scraping with free readers to get what I paid for always appealed to me as forcing an honest client to fight for it after he got it. I do hope that poultry

paper publishers are in dead earnest and I believe they are.

M. M. JOHNSON.

The ordinary fowl—that is, one not held in high esteem by an experienced breeder—is not valuable enough to doctor up and fuss with, by the novice. If roup shows in the eyes and nose, by an ill smelling discharge, take the bird away at once and kill it.

The very early hatched bird is apt to molt with the old stock in the fall. It is also apt to lay heavily all winter and as a result will not produce eggs which will hatch as strong and vigorous chicks as those from birds that begin to lay in January or February.

75¢
REPAIRS

Just facts—that's all you want. Facts can't hurt you nor Tubular Cream Separators.

Facts prove Tubulars outwear all other makes five to ten times over.

On August 2d, 1904, we started a No. 9 hand driven Dairy Tubular, rated capacity 900 lbs. per hour, on the hardest test a separator was ever put to—an endurance test to last until the wearing parts give way. This Tubular has now run 50 hours a week for 43 weeks—and is still running. Every week of this test is equal to a year's service in a ten cow dairy. No other separator made could stand such a test.

24 Years' Work—No Repairs	43 Years' Work—75c Repairs
Hours run..... 1,200	Hours run..... 2,150
Pounds separated.... 1,080,000	Pounds separated.... 1,985,000
Turns of crank..... 8,155,760	Turns of crank..... 5,652,070
Turns of bowl..... 1,152,000,000	Turns of bowl..... 1,864,000,000
Oil used..... 3 quarts	Oil used..... 5 1/2 quarts
Time oiling..... About 4 min.	Time oiling..... About 7 min.
Time adjusting..... None	Time adjusting..... 10 min.
Repairs..... None	Repairs..... 75 cents

After 24 weeks, the balls in the frictionless bearing supporting the bowl showed wear. This was natural, for each had rolled over 32,000 miles. Renewing balls cost only 75 cents and ten minutes adjusting, yet made this Tubular as good as new. All Tubulars are equally durable. Catalogue P-205 tells about them. Write for it today.

Steel Roofing, \$1.50 Per 100 Sq. Feet

Painted red both sides; most durable and economical covering for roofing, siding or ceiling, for barns, sheds, houses, stores, churches, cribs, poultry houses, etc.; easier to lay and cheaper than any other material; no experience necessary to lay it — a hammer and hatchet the only tools you need. At this price to all points east of Colorado, excepting Oklahoma, Texas and Indian Territory. At this price we furnish our No. 15 semi-hardened flat steel roofing, sheets 24 inches by 24 inches. At \$1.60 this same material corrugated as shown in illustration, or in "V" crimped, or standing seam. At 50 cents per square advance over above prices we will furnish this material in 6 and 8 feet long; \$2.55 for brick siding or beaded ceiling or siding. Send us your order for immediate shipment. Time will prove its enduring qualities. It withstands the elements the best of all coverings. Ask for further particulars. WRITE FOR FREE CATALOGUE NO. A. M. 188 on building material, wire, pipe, plumbing material, furniture, household goods, clothing, etc. We buy at SHERIFFS' AND RECEIVERS' SALES. 100,000,000 feet of lumber from the World's Fair.

CHICAGO HOUSE WRECKING CO., 35th and Iron Sts., CHICAGO, ILL.

DUSTING OF FOWLS FOR VERMIN.

To win in the show rooms, you must by all means have your fowls in beautiful plumage. How must we accomplish this? The time to begin is in early spring. Get some good louse powder; most any of those advertised in this journal are good. Go into the hen house after your fowls have gone to roost; be very careful not to excite them. You must be very gentle handling and dusting them, as you are apt to injure some of the plumage that may cause you lots of trouble later on. Take your fowls by the feet, head down; be very gentle with them. Do not, by all means, get them excited. Open the feathers with your hands first, then proceed to apply the powder; be sure you get powder on thoroughly all over and on the body of the fowl; this is essential. You must dust at regular intervals during entire summer, at least every two weeks.

Now you must be very careful and watch your fowls closely, for just as soon as you detect any new plumage you must stop right there handling and dusting them. Now if your fowls have been carefully looked after you will not have any vermin to combat during moult.

I dare say that there are more birds ruined and more off colored birds in our show rooms caused by the handling and dusting during this critical period, especially by the inexperienced, than from any other cause.

Remember it is a matter of impossibility to win the blue ribbons with off colored birds. J. NORMAN BOWEN.

Manchester, Va.

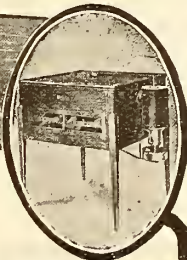

WHAT OTHER GIRLS CAN DO.

The readers of this paper, many of them, can remember a little story of mine some three years ago about what two girls can do. For those that did not see or do not remember it, will mention here that two girls that were out of a job undertook to buy fresh eggs from the farmers and poultrymen and sell them again at fancy prices; they succeeded and are in the business yet.

Since then I have been in correspondence with dozens of others that are in it or going in it. By the way, the plan is open to anyone, whether girls, women or men, and the field is big and getting bigger. So many write me about it that my correspondence has grown to dimensions, and a desire to lessen my work, yet do some good, prompts me to here outline the plan.

As a starter rent a room in a convenient part of the town and hoist a sign "Cash Paid for Fresh Eggs." If you have enough capital you can also buy butter. Keep a supply of poultry feeds and appliances. Take the agency for a good incubator and brooder and carry on a mixed business, but with a very limited capital the egg business can be started. The first thing is to find a market, the next thing is to fix the eggs up marketable.

The markets can be found in all cities, the health and pleasure resorts the best, sometimes you can work up a demand with hotels. Other times you can start with grocerymen that cater to and have the best class of trade. The way to fix the eggs is to sort them, putting the white ones in different cases and cartons from the brown ones, wash and clean the dirty

MODEL INCUBATORS

That give you satisfactory hatches without constant attention.

That contain the most active thermostat in use, and on which the patent office has recently granted me four strong claims.

With the Model Incubator the past season, Wm. H. Truslow, of Stroudsburg, Pa., broke all records for hatching duck eggs.

BROODERS

That rear practically all the chicks put in them.

POULTRY FOODS

They are made of sweet, wholesome grains, uniformly cracked, pearled and graded. Send for my new food circular, "Poultry Feeding for Profit."

CHAS. A. CYPHERS, 301 HENRY STREET, BUFFALO, N. Y.

ones, stamp your name and guaranteed fresh on the large ends, then put them in cartons holding one dozen each; these cartons are made of pasteboard and cost probably 1½ cents each. You can ornament them with your own advertising if you wish or you can leave them blank. These cartons pack in an ordinary egg case with the fillers removed. You can still further adorn the inside of cartons with tissue paper, the object being to make them look clean and handsome, and while I think of it, will mention to use clean cases and if possible get new ones.

Some time you may have to call on the groceryman to get him to take hold and you may have to furnish a case or two at market price or a small advance, but it will not be long until he will have such a demand for your brand of eggs that he will be very anxious to get more of them and you can raise the price and so can he. There will be no danger of losing him. People who eat eggs want them fresh and clean looking. The better appearance they make in the store soon has its effect on the groceryman and his customers. More people will eat eggs and indirectly all poultrymen are benefited.

The things to look out for are bad accounts and bad eggs. As far as the advance price on the eggs is concerned, it cuts but little figure with the demand. It is now and always has been and with everybody that the quality of the eggs was the main thing and the little difference in price a second consideration. I trust this will help a great many. I am sure it will injure none.

M. M. JOHNSON.

Clay Center, Neb.

OAKWOOD JOTTINGS.

At this time of the year the poultry man is apt to cast a backward glance over his experience in hatching and raising chicks. This experience is scarcely ever so favorable as to make unimportant the study of the conditions which insure fertility in a high percentage of the eggs to be incubated, and in the means by which the greatest number of the chicks hatched may be raised to maturity. He finds, it may be, that in "counting his chickens before they were hatched" he is wide of the mark, and in counting them after they were hatched he has made too high an estimate. His success next year will depend greatly on his ability to trace his losses back to their causes and on his skill in removing those causes.

You are doubtless interested now in making a study of the youngsters, a part of which will take their places next year in your breeding yards. You will be glad to see many promising ones; none will of course be perfect. You will see some fit to show anywhere if—No, do not remove the defect, even if it is so slight that a single movement of the thumb and finger will do it. Let it remain until you are ready to select your breeders, then determine whether it is so serious as to outweigh many excellences. If it is exclude the bird.

Theoretically an incubator should hatch a higher percentage of eggs than a hen, and the time is surely coming when it will do so. On this line intel-

lect is sure to beat instinct; but, as yet, we believe, instinct is ahead. The hen with a lot of "cold corners" to her nest will sometimes hatch every fertile egg. The amount of heat received by the eggs in the middle and by those around the edge of the nest, which, at times, are apt to be partly or wholly uncovered, is considerable, and yet, in the end, lo, a great hatch. The reason for "dead in the shell" as applied to an incubator chick is to be sought, in part at least, on other lines than that of unequal distribution of heat. The incubator has come to stay; but like other human contrivances it is susceptible of improvement. Among its many obvious advantages are hatching by wholesale, so to speak, the hen does a small retail business; and hatching at any time; you must await the pleasure of the hen.

ALVAN SMITH.

Marshall, Ill.

Mr. H. A. Nourse, for the past two years associate editor of the *Reliable Poultry Journal*, and before that well known as a fancier at Barre, Mass., and as manager of Fisher's Island Farm, has assumed editorial management of *Poultry Herald*. Mr. Nourse is well qualified for the position and the JOURNAL wishes him every success in his new field.

After the quality of the flock is established, the next vital step is the advertising of the fact that you are a prize-taker.

Begin now to prepare for the show season. The work cannot be done at the last minute.

Cyphers Poultry Supplies and Foods.

CYPHERS FORCING FOOD

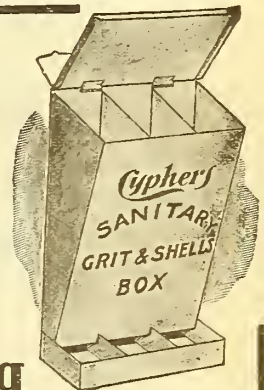

Puts on size, flesh and weight, and produces plumage with a gloss quicker than any other poultry food on the market. It is not a condiment, but a pure food, properly balanced to give the results desired. It contains a large proportion of protein—the most costly nutrient to be found in grains—and is just what has long been needed by fanciers who wish to hasten the growth of plumage and to secure size on their young stock for the fall shows. As its name indicates, it is intended for forcing the growth and fitting young stock for market. It not only adds pounds to the weight of the birds, but adds a cent or two a pound to their value on the market. It makes the birds bigger and better and so greatly increases the profit on a flock, whether intended for market or show.

We grind, mix, sack and seal all our Foods. For the protection of our customers our ready-mixed Poultry Foods are put up in sealed bags, bearing our Trade Mark, each bag being sealed with a lead seal with the word "Cyphers" stamped on one side and the word "Buffalo" on the other. Customers should refuse all bags which do not bear our seal, also those on which the seal has been broken or removed. (ADDRESS NEAREST OFFICE)

Shows, Associations and Clubs

Secretaries are requested to send us the latest news and announcements for this department.

INTERNATIONAL BANTAM BREEDERS' CLUB.

A great future is promised for bantams. Everywhere new breeders are adding some of the midgets to their yards and thousands of bantams are bought and sold annually at good prices. No doubt there is a great opportunity for an association of bantam raisers and the International Bantam Breeders' Club is right ready to take advantage of the opportunity. Several years ago this organization was started and now it feels in a position to do the fancy some genuine good. We hope to bring before the public a knowledge of the many interesting phases of bantam raising. We want to impress upon parents what an excellent pastime the care of a few bantams is for their children. We want to impress upon every man and woman what an excellent recreation it is after a hard day's work.

To do this we need the hearty co-operation of all present bantam breeders. We think the club is something for fanciers to feel proud of and we know that a membership in it will be valued very highly. As a special inducement to all bantam breeders the officers have decided to offer a membership in the club for \$1, same to include dues to Oct. 1, 1906. The regular initiation fee and dues are \$2 and we feel sure that large numbers of interested persons will take advantage of

this offer. This offer holds good until Nov. 1 only.

A handsome club catalogue is contemplated for this fall. The names and addresses of all members, together with the varieties they breed will be included, which in itself will be no small advertisement.

The secretary will be glad to furnish application blanks and any information desired. We will be glad of the names of all bantam breeders in your vicinity.

NATIONAL SINGLE COMB RHODE ISLAND RED CLUB OF AMERICA.

Editor AMERICAN POULTRY JOURNAL:

Realizing that to place their variety and breed before the public in the place it merits, concerted action as well as individual effort was necessary and feeling the necessity of such a course a number of breeders of Single Comb Rhode Island Reds have perfected a temporary organization to be known as "The National Single Comb Rhode Island Red Club of America" for the purpose of elevating the standard of the variety, the mutual improvement of the members by the exchange of ideas and experiences and to secure for the variety that popu-

larity and publicity which it so richly merits.

Until the first meeting of the club, which will be held in Cincinnati Jan. 18, 1906, time and place of meeting to be announced later, the following gentlemen have kindly consented to serve:

President, C. N. Hansen, Warsaw, Ky.; vice-presidents, F. A. Bennett, Canton, Ill.; J. H. Vallire, Cedar Rapids, Iowa; A. Johnson, Kansas City, Mo.; secretary-treasurer, Dr. G. D. Wilcoxon, Freeport, Ill. Executive committee, Rev. S. R. Cunningham, Oakland, N. J.; F. M. Malone, Cayuga, Ind.; H. C. Kellerman, Kansas City, Mo.; W. J. Hibner, Aurora, Ill.; C. F. Ward, Winter Park, Fla.; W. J. Seely, Castle Dale, Utah; J. L. Probst, Pomeroy, Ohio; C. N. Hansen, Warsaw, Ky.; Dr. G. D. Wilcoxon, Freeport, Ill.

Honorary state vice-presidents: J. R. Proyer, West Virginia; C. F. Ward, Florida; H. R. Crane, Illinois; J. C. Hausman, Connecticut; Rev. S. R. Cunningham, New Jersey; Dr. C. E. Hostetter, Ohio; J. R. Williams, Missouri; W. J. Thomas, Alberta, Canada; J. H. Meers, Kentucky; Dr. W. M. Lawrence, Indiana; Prof. L. Sheldahl, Iowa; Dr. Geo. Benton, Michigan; L. C. Duncan, Utah; A. C. Hoyle, Texas; L. S. Harner, Colorado; F. H. Garriesy, Rhode Island; Owen E. Leach, New York; and C. E. Copeland, Wisconsin.

At the above meeting the club will not only perfect and make permanent its organization but will also give two prizes to be competed for by members, of a \$25 silver cup for the best cock, hen, cockerel and pullet and a \$10 silver cup for the best 12 eggs.

Individual effort in these days of organization and strenuous methods counts for almost nothing; it is only by concerted effort that S. C. R. I. Red breeders can put their variety where it belongs, at the head of the poultry list. We de-

ARE YOUR HENS LAYING WELL RIGHT NOW

**The Laying Hen
Is the Paying Hen.**

**Increase your Egg
Yield—Double
your Profits.**

YOU CAN MAKE YOUR HENS LAY MORE EGGS

by feeding Green Bone fresh cut. Thousands have done this and succeeded. They found that the cut bone, gristle and meat doubled their egg yield, made more fertile eggs, better hatches, earlier and heavier broilers and heavier market birds. Would you reap this success? Buy a

MANN'S LATEST MODEL BONE CUTTER.

The one that has a self-regulating feed, automatically adapting itself to the strength of the operator. It cuts hard and soft bone with equal ease and never clogs. It cuts the adhering gristle and meat and all of the bone into a fine, clean food, full of protein and all other egg elements. It leaves no chunks nor gristle. You do not need to experiment when you buy a Mann's, because

We Will Ship One to Your Address On 10 Days Free Trial.

This is a square offer and you need not put up any money in advance. Write and see. Catalogue free.

F. W. MANN CO., Box 56, Milford, Mass.

sire to do for the variety what the Rhode Island Red Club of America has done for the breed in general and will so far as possible work in harmony with that club.

With specialty clubs so numerous it hardly seems necessary to enumerate the advantages accruing to the one who joins such a club. The immense popularity of some breeds is directly attributable to the club which has pushed that breed, not only by giving the breed publicity, but by the improvement of the breed caused by the exchange of ideas and experiences among the club members, the result being not only better birds but better prices for them. The cream of the business going of course where it belongs to the men who had sufficient intelligence to join their club and benefit by each other's mistakes and successes, thus bettering their birds and prices.

We already have a lusty young club whose members represent seventeen states and one Canadian province and we intend if possible to set a mark for all future clubs to point to, in rapidity of growth and enthusiasm of our members. In every state where the club has five members club ribbons will be offered and in states having ten or more members a silver cup will be offered as prizes to be competed for by members. Considering the benefits to be derived from membership we think that there is not a breeder of S. C. R. I. Reds in the States or Canada who can afford to stay out of our organization unless of course he is one of those who is satisfied to see other breeders do the work while he attempts to reap the benefit of their labor.

Brother breeders, you can help this breed to the place it deserves in the heart of the American poultry public by joining our club, and thus lending your assistance, moral and financial, to our endeavor to not only better the breed but also the variety. The annual membership will be one dollar, which should be sent to the undersigned, who will also be glad to answer any questions concerning the club.

Freeport, Ill.

C. N. Hansen, President,
Warsaw, Kentucky.

ST. JOSEPH, MO.

The Northwest Missouri Poultry Fanciers' Association has been reorganized and is now under the management of some of the most active fanciers in Northwest Missouri, southern Iowa and eastern Kansas and Nebraska. The officers are already busy with the preliminary work for the next annual exhibition, which will be held in St. Joseph, January 20-20, 1906. Adam Thompson of Amity, president of the association, and C. H. Rhodes of Independence, Mo., will do the judging. Communications should be addressed to the secretary. E. L. McDon-

SARATOGA, PA.

Saratoga & Schuylkill Valley P. P. P. S. Assn. had its twelfth annual election of officers and selected dates for their twelfth annual show. Officers: L. K. Drumheller, president; Wm. Wisler, first vice-president; F. C. Newhard, second vice-president; S. J. Kurtz, secretary; J. B. Hoffman, financial secretary; H. F. Scheffey, treasurer. Show dates 29-30th of November and 1-2d of December, 1905. Many valuable and useful presents, as well as silver cup are already contributed and the 12th annual show promises to

White Wyandottes and Pekin Ducks

Greatest competition White Wyandottes and Pekin Ducks, winners in the greatest competition in the world: World's Fair champion 1, 3, 6 and 7 on young Pekin hens; 2, 3 and 7 young drakes, 3, 5 old drakes and 1 old hen. Won 6th and special on cock in White Wyandottes, and I have the best in the world in my breeding pens for 1905. 1st cock, 3d cockerel, 1, 2 and 4 pullets and eight more pullets, sisters to the prize winners and a brother to the 3d prize cockerel.

Illinois State Fair, 1st, 2d and 3d on Pekin Ducks. No White Wyandottes were shown. St. Louis Fanciers' Association, Dec., 1903, won 1st breeding pen, 1st pullet and 3d cock in White Wyandottes and special for best pullet. Chicago National Fanciers' and Breeders' Association, 1905, won 1, 4 pullets, 1, 5 hen, 1, 3d chl., 2, 5 cock and three specials for best shape, and silver cup for the whitest bird in the show room on White Wyandottes. Pekin Ducks 1, 2 cock, 1, 2 hen, 1, 2 cockerel, 1, 2 pullet. White Wyandotte eggs \$3 for 13, \$5 for 30. Pekin Duck eggs \$2 for 11, \$3.50 for 22, \$7 for 50.

Collinsville, Illinois

WING PIANOS

Are Sold Direct From the Factory, and in No Other Way

You Save from \$75 to \$200

When you buy a Wing Piano, you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many still do—at retail—you pay the retail dealer's store rent and other expenses. You pay his profit and the commission or salary of the agents or salesmen he employs—all these on top of what the dealer himself has to pay to the manufacturer. The retail profit on a piano is from \$75 to \$200. Isn't this worth saving?

SENT ON TRIAL
Anywhere We Pay Freight
No Money in Advance

We will place a Wing Piano in any home in the United States on trial, without asking for any advance payment or deposit. We pay the freight and all other charges in advance. There is nothing to be paid either before the piano is sent or when it is received. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing, and are under no more obligation to keep the piano than if you were examining it at our factory. There can be absolutely no risk or expense to you.

Do not imagine that it is impossible for us to do as we say. Our system is so perfect that we can without any trouble deliver a piano in the smallest town in any part of the United States just as easily as we can in New York City, and with absolutely no trouble or annoyance to you, and without anything being paid in advance or on arrival either for freight or any other expense. We take old pianos and organs in exchange. A guarantee for 12 years against any defect in tone, action, workmanship or material is given with every Wing Piano.

Small, Easy Monthly Payments

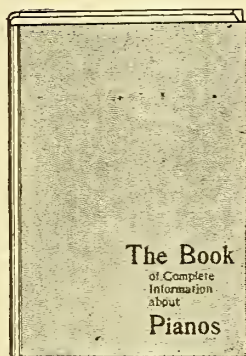

In 37 years over 40,000 Wing Pianos have been manufactured and sold. They are recommended by seven governors of States, by musical colleges and schools, by prominent orchestra leaders, music teachers and musicians. Thousands of these pianos are in your own State, some of them undoubtedly in your very neighborhood. Our catalogue contains names and addresses.

Mandolin, Guitar, Harp, Zither, Banjo—The tones of any or all of these instruments may be reproduced perfectly by any ordinary player on the piano by means of our Instrumental Attachment. This improvement is patented by us and cannot be had in any other piano. **WING ORGANS** are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

You Need This Book

If You Intend to Buy a Piano—No Matter What Make

A book—not a catalogue—that gives you all the information possessed by experts. It tells about the different materials used in the different parts of a piano; the way the different parts are put together, what causes pianos to get out of order and in fact is a complete encyclopedia. It makes the selection of a piano easy. If read carefully, it will make you a judge of tone, action, workmanship and finish. It tells you how to test a piano and how to tell good from bad. It is absolutely the only book of its kind ever published. It contains 156 large pages and hundreds of illustrations, all devoted to piano construction. Its name is "The Book of Complete Information About Pianos." We send it free to anyone wishing to buy a piano. All you have to do is to send us your name and address.

Editor AMERICAN POULTRY JOURNAL.
Dear Sir: Tell your readers, and especially the exhibitors, that the great Indiana State fair is Sept. 11-15, that we offer more money and pay out more money on poultry than any of them, and pay all premiums before the fair closes. Send to Chas. Downing, Indianapolis,

Irrigation Is Independence

In working unirrigated land, the farmer is dependent for success on moisture and sunshine. Irrigation makes him independent of rain but he needs light and heat. In the Yellow Stone Valley the sun shines 300 days out of the 365. See the point? The land is rich, markets and transportation facilities of the best.

"The Yellowstone Valley is noted for its large strawberries, luscious raspberries, and richly flavored blackberries. Apples of the finest quality are grown. Pears, grapes, plums, and cherries are harvested in great profusion. The people make big displays of tomatoes, sweet potatoes, hops and flowers at the annual county fairs."

It is traversed by the

Northern Pacific Railway

Irrigated lands in this valley produce per acre per year as follows:

Alfalfa, three crops, 5 to 7 tons	Oats, one crop, 40 to 90 bushels, machine measure
Timothy, one crop, 2½ tons	Barley, one crop, 40 to 60 " " "
Potatoes, one crop, 300 to 600 bushels	

Hundreds of thousands of acres of land along the Northern Pacific Railway in North Dakota, Montana and Washington are, and will be made available for cultivation by government and private irrigation projects. Write for maps and pamphlets to C. W. Mott, General Emigration Agent, St. Paul. One way Colonist tickets at greatly reduced rates on sale September 15—October 31. Ask about round trip Homeseeker's tickets. A. M. Cleland, General Passenger Agent, Fourth and Broadway Streets, St. Paul, Minn.

Cockerels \$2.00 and up.
Mated Pens \$10.00 up.

GREATEST Prize Winning Strain in America

Old and young stock in pink of show condition now ready. Breeding, exhibiting and conditioning have been a business with us for eighteen years, during which time our winnings have been unapproached at the largest shows.

Our patrons, the country over, have won for years on stock of our breeding.

1200 and over beauties growing under most favorable conditions to win the coveted blue ribbons at this season's exhibits.

28-page illustrated, descriptive booklet, free to readers of this paper. Write today.

Elm Poultry Yards, Box 121 Hartford, Conn.
Estab. 1888

Exhibitors will be treated with every courtesy and their birds given the best of care and treatment. Premium list now ready. Address all communications to A. I. Spencer, secretary, Parkersburg, W. Va.

hatching chickens with the Gem Incubator, that low-priced, high-grade, absolutely-reliable, up-to-date Hatcher. Sure profits. Now is the time to prepare for the early hatching season. Write today for a beautiful catalogue FREE. GEM INCUBATOR CO. Box 8 Dayton, Ohio

DON'T BUILD

that new hen house or think of fixing up the old one until you have secured a copy of our large thirty-page catalogue on Poultry House Fixtures. You will then decide, as have hundreds of other poultry raisers in every part of the country that

The Potter Portable Henny Outfit and Vermin Exterminator Roost

are the greatest improvements of the age in the line of up-to-date, convenient, time and labor saving poultry house fittings. They are the 20th century fixtures; they save you time, labor, worry and money in your poultry work. You can never successfully and properly do this work and get the results you want, clean and sanitary quarters, healthier fowls and larger egg production until you have your house equipped in the right manner. Our fixtures are made in three styles and over 40 sizes; so we can fit up any house large or small, no matter how arranged. Some people buy two outfits and others buy twenty-five. You can decide just what you need after reading our fully illustrated catalog. Write today enclosing one red stamp.

White Wyandottes

Duston's breeding and exhibition birds of high quality, farm raised and bred in line from my prize winners. While they did not get any ribbons at the great World's Fair, they were among the best of hundreds that went home without prizes. If you want good birds to start you right at reasonable price, I can supply you in young and old in lots to suit.

G. H. SUNDERMAN,

Beardstown, Ill.

ing named judges will place the awards: T. E. Orr, Thos. F. Rigg, Chas. McClave, Theo Hewes, Eugene Sites. The judging will be by comparison.

The Christian County Poultry and Pet Stock Association will hold show at Taylorville, Ill., Dec. 6-9. Secretary C. E. Barnes writes: "We have added a corn exhibit, which proved very successful last year. In addition to our regular and special premiums, which are very liberal, we will give to the best pen of each of the prominent varieties \$2.00 cash. Each evening we give an entertainment consisting of vocal and instrumental music, and literary exercises by the best talent of our state. We propose to please all. Thos. F. Rigg, judge."

Secretary Foley of the Cincinnati association, announces the following judges for the forthcoming show: Theo Hewes, Thos. F. Rigg, T. E. Orr, F. C. Shepard. Names of additional judges will be announced later.

Painesville, Ohio, will hold show the week of Jan. 8. Thos. F. Rigg, judge. F. M. Crowther, Sec., Willoughby, Ohio.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: The International Rose Comb Black Minorca Club has provided special ribbons and will distribute them to be competed for in the leading shows of states where the club has sufficient membership to warrant it. Each of the following states have already the required number of members: Indiana, Massachusetts, New Jersey, New Hampshire, New York, Wisconsin, Connecticut, Michigan, Vermont, Illinois, North Carolina, Kentucky, Montana, Pennsylvania, Ohio, Washington and Missouri, also District of Columbia and the Provinces of Ontario and Nova Scotia, Canada. The indications are that other states will be entitled to ribbons before this is published, therefore I invite correspondence with the secretaries of poultry exhibitions throughout the United States and Canada on the subject of rib-

Made by Pratt Food Co., Phila. Over 30 years old.

bons for club competition in their respective shows.

Breeders of Rose Comb Black Minorcas who are not already members of the International Rose Comb Black Minorca Club should join it at once that they may be eligible to compete for all the club's ribbons, cash prizes and cups which will be offered during the coming winter. Dues \$2 for initiation and one year membership.

Prospective members and show secretaries should address for particulars,

GEORGE H. NORTHUP, Secy-Treas.

Raceville, N. Y.

WYOMING WANTS FIVE HUNDRED CHICKEN RANCHES.

The governor of Wyoming, B. B. Brooks, has just issued a pamphlet on the state. Among the score or more of things the state is in need of, according to this reliable source of information, are chicken ranches. The generosity of the general government toward this region, in the appropriation of immense sums of money for irrigation projects, has made agriculture a certain possibility. Logically, any of the branches of business usually carried on in connection with the industry may profitably follow. The past season spring chickens sold for sixty-five cents each. Hens are six dollars per dozen; eggs are never less than 25 cents, and during the winter as high as 50 cents per dozen. Turkeys sell for 25 cents per pound. These are easily raised because of the absence of dewy mornings. They find a great part of their food from the grassheppers. Where cows are kept the year around without feeding the curd for the young turkeys is without cost. A small field of grain planted near the range of the fowls furnishes another kind of food with a minimum of labor and cost.

Like other occupations, the most interesting part of poultry raising is the money part. There is no doubt this state offers golden opportunities to any one with the proper amount of energy and capital.

KATE C. STANARD.

Casper, Wyo.

Proper exercise in time is worth more than all the medicine you can give a fowl after it is sick.

S. C. W. Leghorns

100 fine yearling breeding hens for sale, and some fine yearling cocks. Also 100 three-months-old cocks from my best matings. Write for catalogue to

W. L. FERN, Elgin, Illinois

— \$100.00 IN CASH —

Was won by Vanatta's S. C. White Leghorns at St. Louis World's Fair. At Chicago, January, 1904, I entered three cockerels in class of fourteen and won 1st, 3d and 5th cockerel. Choice breeding and exhibition cockerels, hens, pullets, trios and pens for sale cheap.

E. E. VANATTA, R. F. D. 8, Vandalia, Mo.

Questions and Answers

Questions asked by subscribers will be answered in this department.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: (1) I read your article in the June number of the AMERICAN POULTRY JOURNAL in regards to foods for poultry. You mention oats, corn, wheat, barley and millet as being sufficient to answer every requirement. Now, what myself and neighbors want to know what proportion of each, in pounds, does it require to make the food to feed young chicks just taken from the brooder and put on the range.

2nd. What proportion of each to feed for egg production.

3rd. What were the crosses that were first used to develop the Rhode Island Red? I have a circular from a prominent breeder of a 214-egg strain. He says that two men back in the fifties were engaged in the market business in Bedford, Mass. That they were rivals, and that one of the parties crossed the Brahma with the Cochins, and that this is how the original Rhode Island Red was made; that in 1866 one Isaac Wilbor gave them the name of Rhode Island Reds. Now, if that is true I do not see how they can be the great layers their advocates claim they are. In the May number of the AMERICAN POULTRY JOURNAL I read an article from the pen of Charles C. Reid. He claims that they are a cross between the Cochins and the Malay Game made fifty years ago. If Mr. Reid is right Mr. Smith, of Attleboro Falls, Mass., is wrong. Which is right?

Laton, Calif.

Answer:—(1) The following mixture, the grains cracked in mill and thoroughly mixed, is admirably suited to the proper development of the young stock on the range where they can secure green food at will:

Corn	25 pounds
Oats	35 pounds
Wheat	20 pounds
Barley	10 pounds
Millet	10 pounds

100 pounds

Animal food in way of beef scraps should be given, in self-feeding hoppers, where the stock can go to it at will. Grit, oyster shells and granulated charcoal should also be supplied in the self-feeding hoppers. Chicks as well as fowls relish oyster shells. They contain a certain amount of salt which the chicks are fond of.

(2) The same. Feed as scratch food. Also grind and mix with it a goodly quantity of cut clover or alfalfa.

(3) It can be said that the Rhode Island Red of to-day is the result of more than fifty years of careful, systematic out-breeding—always along lines of utility, egg production and market

poultry. More than fifty years ago Red Cochins China fowls were introduced into Massachusetts by thrifty sea captains, and later they brought Red Malay cocks. Dr. Bayliss, of Boston, who imported a number of the Cochins China fowls in 1846, says the males were nearly all red in color. Mr. Taylor, who made an importation in 1847, is quoted as saying "the males were red." The Red Cochins China and Red Malay males were bred with the poultry in the vicinity of Little Compton and Westport for years after the date above mentioned. The result was a hardy, quick growing chick, and as egg producers these crosses were highly prized. The rose comb variety was obtained by the introduction of Rose Comb Leghorn blood, in many cases. About twelve years ago the pea comb variety made its appearance. The single and rose comb varieties are the only ones recognized by the American Rhode Island Red Club. Mr. Rigg will give in detail the origin and history of the Rhode Island Reds in his series of articles "Origin and History of the Breed," now running in the AMERICAN POULTRY JOURNAL.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Please answer in your September issue the following: One of my young chickens began to act peculiarly as soon as liberated from coop in the morning, and when it would start to move it would not have any control of the way it was going, and when it would stop its hind parts seemed too heavy and it would sit down and draw its head back until the back of head would rest on its back, beak sticking straight up. I gave it one-half teaspoonful of castor oil and one-half teaspoonful of baking soda; second day it had completely recovered. What was the cause?

Webster, Pa.

Answer:—Evidently a form of epilepsy, no doubt caused by some intestinal trouble, from which the castor oil relieved it.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please tell me what to do for my chickens, I have lost so many this year. The first symptoms are drowsiness, thirsty, weak droppings, thin and yellowish; all in two or three days. This spring I lost five old hens, now my chickens about two months old are dying. They have good range, next to a farm; feed them very little now for they are near a wheat field and barn. Give them one feed a day of corn, wheat, oats and bran, changing from one to the other. They get plenty of grit; keep copperas in the water; have

200 EGG HENS.

Wouldn't a pen of that kind make you money this winter?

The Walter Hogan System

will enable you to select that kind from the hens and pullets which you now have, or from the hens and pullets you buy. Will enable you also to select the cocks which will breed that kind of hens and pullets. While extraordinary, the "System" is after all just plain common sense. You can learn how in just a little while. The first cost is very small—the results are only limited by the number of fowls you keep. You take no risk for if the "Hogan System" is not entirely satisfactory we refund all the money—we hold nothing back. Think it over and then write us for full particulars and price. Mailed free.

THE WALTER HOGAN COMPANY,
17 Nat'l Bank Bldg., Fergus Falls, Minn.

HOW
TO
KILL

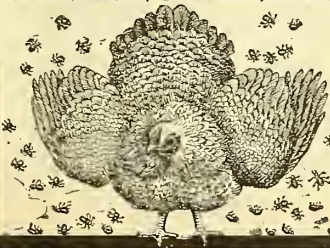

ALL
THE
LICE

As lice breathe through their sides the quickest way to exterminate them is by suffocation. Fumigating or dipping fowls is dangerous to sight and breathing and ruinous to health. Dusting with a

LIGHTNING LICE KILLING MACHINE

is the only safe method. Cannot harm eyes, lungs, feathers; delicate chicks or broody hens—they like it better than a dust bath. Cleans 100 to 150 fowls or 300 chicks in an hour. Kills all the lice whether they hide under the feathers of the neck, hackles, wings or vent. No greasing—clean and easy to handle. Send for free catalog and book of poultry facts. The Chas. Schild Co., 2 Frankfort St., Cleveland, O.

a good cool hen house, clean it every morning; also all the nests, coops, etc.; keep lime sprinkled around and use carbolic acid once in awhile. Have plenty of shade. I spend more time with them than I do in the house and still this disease will crop out every now and then, and it is not from neglect in any way, I am sure. Please tell me what to do for them and oblige one of your JOURNAL readers. J. C. B. G.

Granite City, Ill.

Answer:—From the symptoms given we are led to believe that the trouble is caused by the liver refusing to perform its proper work, and this condition is generally brought about by improper feeding. The following treatment may be given with fair success. Magnesium or sulphate of sodium in a purgative dose (20 grains to a dram) and follow with sulphate of magnesium 10 grains, bicarbonate of sodium 2 grains, repeated daily for a week.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer through your columns: What is the attitude of insurance companies towards the practice of running incubators or brooders in cellars of insured buildings? G. D. C.

Glen Ellyn, Ill.

Heretofore there has been more or less objection from insurance companies in regard to incubators and brooders in buildings which are insured, but the incubator and brooder manufacturers at their late meeting in Indianapolis took this matter up with the insurance companies and the indications are that in the near future these objections will be modified to a great extent.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer through your Question and Answer department the following questions: A great many of our chicks when a few days old take bowel trouble, then it turns to constipation and they droop around and die. What is the cause of it and what will cure them? Then some of them droop around and we cannot see that there is anything wrong with them, and they die. We feed cracked wheat and corn. Grant, Pa. J. G. W.

Answer:—Your system of feeding is at fault. Young chicks should not be fed cracked corn. Feed some one of the prepared chick feeds that are advertised in these columns. Boiled milk will cure and prevent bowel trouble. Watch closely for lice; they will cause bowel trouble in little chicks.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer through your journal how can you tell the age of a chicken and how many points should the comb of a full-blooded Plymouth Rock have, and oblige. Ft. Wayne, Ind.

Answer:—There is no way of telling the age of a chicken. The standard calls for five points on the combs of Plymouth Rocks, but a point more or less is not a disqualification.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: I wish you would publish in Questions and Answers the following: I have turkeys, chickens and geese. They act as if their necks were broken; their combs are as red as blood. I

SOMETHING NEW
STRATHMANN'S POULTRY YARD SEEDER
To Distribute Grain and Seeds For Scratching Fowls

A machine any one that keeps a dozen chickens ought
to have. The extra profits of same will pay for seeder
in one year. Its weight is 30 lbs., sows two rows 10 in.
apart and cultivates your ground. Will do what all
poultrymen and farmers say, keep your chickens
scratching. Our seeder has proved itself a winner at
the Chicago poultry show by having a larger attraction
than any other exhibit. Simple, durable and practical;
can't get out of order. Any boy or girl can operate it.
Send for circular.
Strathmann Mfg. Co., 140 E. Fullerton Ave., Chicago, Ill.

have opened them and they look
healthy. They seem to be crazy. They
live a day and then die. Give a
remedy. Mrs. I. P.

Washington C. H., Ohio.
Answer:—This is what is known as
limberneck and is caused by fowls eat-
ing decayed meat. There is no known
remedy for it. Prevent the disease by
burning the dead birds and thoroughly
clean and disinfect your premises.

Editor AMERICAN POULTRY JOURNAL:
Dear Sir: Will you please tell me
if there is any way by which I can
tell my year-old hens from those that
are older?

I neglected last summer to mark my
young pullets in any way, and now, as
I wish to dispose of all my hens over
a year old, would be glad if you could
tell me how I may know them.
Danville, Ill. Mrs. A. F.
Answer:—There is no way that we
know of.

The demand for strictly fresh eggs
on the Chicago market during the past
few months has been away beyond the
supply, and many firms have been pay-
ing from 1 to 3 cents above market
quotations for strictly choice goods,
and are still unable to meet the de-
mand. C. M. Owens & Co., who make
a specialty of handling eggs, are ad-
vertising for strictly fresh eggs for mar-
ket use and are willing to pay top
prices for them. Look up their ad
elsewhere in this issue and write them
for further information.

A FICTION NUMBER.

The September *Century* will be a fiction
number, "Miss Gladwin's Choice," a long
story (complete) by Anthony Hope, leading
in interest. There will be other stories
by Elizabeth Herrick, Lawrence Mott, Ed-
win L. Sabin, Oscar King Davis, Seumas
MacManus, Harvey J. O'Higgins, Gouver-
neur Morris, Elizabeth Cherry Waltz, and
Elizabeth Robins, author of "The Magnetic
North."

Owing to the fact that Mr. Orebaugh
has sold his milling business and wishes
to locate elsewhere, Mrs. J. H. Orebaugh
writes that they are offering their poultry
plant for sale. They will consider an offer
for the stock and trade, the same to be
removed from the farm. Readers of
AMERICAN POULTRY JOURNAL are well ac-
quainted with this stock, it having been
bred under Mrs. Orebaugh's personal care

Clement & Eike, Libertyville, Ill., breed-
ers of White Wyandottes, have a change of
ad this month, in which they are advertis-
ing show birds which are now fully matured
and ready to ship. They have 2,000 birds
to select from. They also have breeders
in any quantity. Send for their catalogue
and mention AMERICAN POULTRY JOURNAL.

F. C. Bailey, of Reading, Mich., has a
change of ad this month, in which he
wishes to dispose of a few dozen yearling
breeding Rose and Single Comb Orpingtons
in buff, black and white that he will sell
very low.

The Standard Flower City Incubator Co.,
Dept. A., Rochester, N. Y., changes their
ad this month with an offer of incubators
on thirty day trial.

Your good housekeeper tops her cake
with great care, and much pride in her
skill as a cook. Your good builder knows
that the best building is a failure without
a good roof. With a roofing like Paroid,
advertised in the columns of this paper,
there is no call for our people to make
this mistake.

**MICA CRYSTAL GRIT
DOES THE WORK**

It is no experiment, having been
used successfully for twelve years and
is the highest grade article of its kind
in use.

Necessary proportion of mica, quartz,
iron, magnesium.

Regulates digestion by properly as-
similating the food, a process abso-
lutely necessary to health and produc-
tiveness in poultry.

Food not assimilated is food wasted.
Mica Crystal solves the problem and
makes the poultry industry profitable.

Without grit the feathered tribe
cannot be healthy or productive. This
is a well demonstrated fact in nature.
Ignorance of it has cost millions. Grit
is to fowls what teeth are to other
members of animal creation. Mica
Crystal never loses its sharpness, it
is the best.

Let us prove the truth of what we
say by filling a sample order for you.

**DARLING & CO., Agents,
Chicago, Ill.**

THE QUESTION OF ROOFING.

The question of roofing is becoming a more serious one every year as shingles become poorer and higher priced. Even when good shingles are obtainable, the ordinary wire nails used with them last but a few years, and a new roof often becomes necessary while the shingles are yet good. Happily, however, the problem has been solved in a thoroughly practical and economical manner by Paroid Roofing, a durable felt roofing that is used by leading farmers, poultrymen, dairymen the country over, as well as by railroad companies, warehousemen and others who want a good, durable roof at low cost. Paroid is now used by the United States Department of Agriculture in its construction work, and has also been adopted by the Panama Canal Commission for use on all government buildings erected in the trying climate of the isthmus. The government adopted it only after demonstrating its superiority for the purpose. Every reader of this paper should send for the Paroid booklet and a free sample. It will give you valuable pointers of economical building. Address F. W. Bird & Son, East Walpole, Mass.

EVERY READER SHOULD SEND FOR FREE SAMPLE.

Those of our readers who are interested in the subject of good, ready-to-lay roofing will do well to write to the manufacturers of Amatite for a free sample which they are advertising.

The sample is not large, but will give a very good idea of what you may expect, before investing your money.

This new roofing material seems to have all the qualifications necessary for a good, durable ready roofing at little cost.

Amatite is guaranteed to be rain, wind and weather proof, and a most excellent fire retardant.

The manufacturers are one of the largest and most reputable concerns in the country, and any claim of theirs can be relied upon.

We suggest writing today for the sample to any office of the Barrett Manufacturing Company, New York, Chicago, Allegheny, Kansas City, Cincinnati, Philadelphia, Cleveland, Minneapolis, New Orleans, St. Louis.

LONG DISTANCE RESULTS THROUGH ADVERTISING IN AMERICAN POULTRY JOURNAL.

The good results to advertisers in AMERICAN POULTRY JOURNAL is not confined to this country alone, but extends to many parts of the globe. We have a letter from H. E. Abbott, proprietor of the *Indian Planter's Gazette*, of Jaintpore P. O., Tirhoot State Ry., India, stating that in the May issue of AMERICAN POULTRY JOURNAL he saw the advertising of the Elkhart Carriage & Harness Co., Elkhart, Ind., and as

W. F. CHAMBERLAIN
314-316 N. COMMERCIAL ST.
CASH WITH ORDER ST. LOUIS, Mo.

The result sent an order for one of their four-seated buggies.

This is a good text for a sermon on the beauty of advertising and the enormous distances that AMERICAN POULTRY JOURNAL travels to carry publicity for its advertisers all over the world.

A BIG BARGAIN SALE.

Charles C. Reid, manager of the Olen-tangy Poultry Yards, Delaware, Ohio, announces that he is now booking orders for Oct. 1st delivery of 2,500 fine R. C. and S. C. Rhode Island Reds at a very reasonable price; also one year old and two year old hens and cocks at the same price. The first orders in will secure this stock. Mr. Reid asks that one-third of the purchase price be sent at the time of booking the order and the balance when the chicks are to be shipped. Mr. Reid guarantees satisfaction and this is an opportunity AMERICAN POULTRY JOURNAL readers should not overlook. Mr. Reid is vice president of the Rhode Island Red Club and his success during the past season has been remarkable with his stock.

IF TAKEN AT ONCE.

M. E. Wurts, 372 Pearl St., Cleveland, Ohio, writes that if taken at once, he will make some excellent bargains on his stock, including two pens of White Wyandottes. These birds are, every one of them, show birds, and he is offering them for half their real value as show birds and breeders. He also has five pens of Rhode Island Reds, two pens Rose Comb Reds extra choice show birds, and five pens of Barred Rocks. He has, also, single specimens one year old of each of these varieties that are good breeders, but not show birds; however, are bargains for any one wanting to get started in any of these varieties for a little money.

H. P. RANKIN'S SUCCESS.

H. P. Rankin of Hartington, Neb., is a man who has been attracting a great deal of attention from breeders the past season and his work promises to make him one of the great leaders in the poultry world. Mr. Rankin breeds Barred, White and Buff Plymouth Rocks and White Wyandottes, and the testimonials that he is receiving from pleased customers make very interesting reading matter.

Claude Denham, of Allen, Mich., writes he got 13 chickens out of 15 eggs. H. L. Baggs, of Sioux City, Iowa, received excellent results from the eggs Mr. Rankin sent him. Out of two sittings of Plymouth Rock eggs he secured 25 chicks and every egg in the cockerel mating hatching. Out of the 33 eggs, there were only four infertile ones, they being in the pullet mating pen No. 3, two eggs laid by hen No. 30 not hatching, one being infertile and the other one the chick started, but died in the shell after being under the hen about a week. Hen No. 32 had one infertile egg, hen No. 34 had one infertile egg and hen No. 35 one infertile egg. Two eggs were smashed by the hen when first setting them and the other one hatched, but the hen stepped on it and killed it. This record shows which one of the birds laid the infertile eggs. Mr. Baggs will give Mr. Rankin another order next season. I. Wriglesworth, of 17 Mile Post, Victoria, B. C., Can., wrote Mr. Rankin that his eggs had turned out the best he had imported for some years, securing 39 chickens out of 46 eggs sent him. He will recommend Mr. Rankin to other chicken men and will buy again next season. Mrs. A. McAllister of Holton, Kan., was very much pleased with the chickens received from Mr. Rankin and has requested that several copies of his catalogue be sent to her neighbors. D. T. Helmlich, of Jacksonville, Ill., upon receipt of Mr. Rankin's catalogue, wrote that it was the nearest, most complete and business-like gotten up catalogue he ever received.

All this goes to show the conscientious work and care that Mr. Rankin is putting into his poultry business.

B. E. Johnson, of Kirkwood, Mo., announces this month that his 1905 youngsters are now ready to make their bow. Mr. Johnson does not now exhibit and here is a good chance for buyers to get some good stock from his prize winners.

LINE BREEDING.

Starting with my chosen breed, the first year I hatched 100 chicks; three days later I cull for elementary defects, this reduces my 100 to 90, a month later, I cull again, fully 40 being disposed of, another culling and my flock contains but 25. These are closely observed. I have my ideal bird firmly fixed in mind and shall try to embody this type in a combination of the remaining 25.

As the breeding season approaches, I mate two pens, discarding all birds that show too large a percentage of defects in any one section. I also follow the system of compensation matings, i. e., for every section in a breeder, make very strong in the mate that where the other is weak.

Mate two birds, each with a five-point comb and a large number of the progeny will be likewise, influenced, more or less, by the combs of their ancestors. Mate

**Beware of cheap Colic Cures
Use Pratt's Veter'y Colic Cure.**

Made by Pratt Food Co., Phila. Over 30 years old.

the best two of the offspring and the number of your five-point combs is greatly increased. This mating for combs alone, is a very simple matter; bear in mind, however, that we have to contend with the production of the bird as a whole in order to produce our ideal.

From the two pens above referred to I shall get a larger percent of good chicks than I did the year previous. these chicks will have in their blood that which their parents did not have to such a degree. They have the ability to stamp upon their chicks the qualities they have acquired by the strict selection of those before them.

By mating the best cockerel from one pen to the very choicest pullets from the other and vice versa, we have established a two-year-old strain.

Close culling and careful compensation matings, with the avoidance of a breeder very defective in any one section, however good in others, will soon produce for you a strain that may be depended upon to reproduce itself. This will also stamp certain characteristics on your strain that will be known as yours.

I do not believe in very close inbreed-

ing in connection with line breeding, such as the mating of grandsire to granddaughter, but practice it occasionally in order to fix certain points otherwise hard to obtain.

The objection I have to inbreeding is its bad effect on health and consequent loss of weight and condition.

A closely inbred strain, even though of high exhibition quality, cannot last unless new blood be introduced. Nine times out of ten the result is discouraging because of the tendency to revert back to features long dormant. Strains established through the use of breeders not closely related, but of the same blood, although harder to build and require more time, yet the qualities are there to stay and also the ability to influence the offspring in their favor when mated with stock of other strains.

JOSEPH S. RIEGEL,

Toledo, O.

Another Important Poultry Problem Solved.

SHADE!

SHADE!

SHADE!

If you want to succeed you must provide **shade** for your fowls. We have discovered a tree that seems better for this purpose than any other, and ask your consideration of the following points:

The cut herewith is a photograph from life. This tree was planted as a seedling four years ago. See the rapid and healthy growth. Its foliage measures 18 feet in width by 22 feet in height. Foliage is heavy and makes a dense shade, a protection from rain as well as from hawks. It responds readily to pruning and will grow as you shape it—tall or short, wide, flat or round, just as your fancy chooses, and is extremely ornamental as well as useful.

To live and make rapid growth fowls must have shade. White birds will get brassy without it and the plumage of dark colored birds will fade and tarnish if compelled to live in shadeless yards. We have trees like this growing in all our yards; some trimmed up from the bottom like cut, others trained to the ground so that the birds can get in under and have complete protection from storm, sun and hawks. The illustration shows more eloquently than words can how the poultry enjoy it.

We have a limited supply, about 2500 trees, in different sizes that you can get while they last at the following low prices, F. O. B. our farm in lots of six or more.

4 feet high	each	\$.50
5 " "	"	.75
6 " "	"	1.00
7 and 8 feet high	"	1.50
10 and 12 feet high	"	2.00

Special prices will be made for large lots

EDDY & EDDY, White Rock Poultry Farm, Manheim, Ill.

DON'T NEGLECT THE CUT GREEN BONE.

Wherever you find a poultryman enthusiastic over his success, you find a green bone feeder. They all know how much it contributes to that success. Those who are not supplying green cut bone to their fowls are working at an unquestioned disadvantage. Green cut bone supplies in best possible form the requisite protein and other egg-making materials. It does more than this. A leading bone cutter manufacturer who has studied the subject and is competent to speak, thus summarizes the advantages in his advertisements: "It makes hens lay more eggs, makes more fertile eggs, better hatches, earlier and heavier broilers and heavier market birds." There is no question as to these advantages. The difficulty has been to get a machine to reduce the bone to proper feeding form. Many poultrymen, even

some of the strongest advocates of its use, are preparing bone for their hens with rather crude machines. It is a hard, slow operation. There can be no possible excuse for this except with people who do not know of the better way. Since the perfecting of the Mann Latest Model Bone Cutter, the manufacturer referred to above, bone cutting for chickens has become a very simple and a very easy operation. Most people look upon bone cutting as hard work. The Mann machine makes it easy. Moreover, it adjusts to suit the strength of the operator. It does all kinds of cutting, including bones and adhering meat and gristle, and does it fast and without danger of clogging. And when bone has gone through a Mann's Latest Model it is all in form so that it is available for use.

There are a good many bone cutters offered. Some of them are hardly worthy the name, as some of our readers would testify to their sorrow. There is no excuse for buying an unknown quantity when a machine like Mann's is offered at such a reasonable price and fair terms. Any responsible person may have it shipped to him on free trial, no money in advance, with privilege of return without obligation or a cent of cost if he does not find it to be all that it is represented. The Mann Company is one of our regular responsible advertisers. We especially commend their Latest Model to our readers' notice. Drop them a line at Milford, Mass.

MAKE YOUR POULTRY PAY.

It will not if you do not keep the lice down and feed a good wholesome, balanced ration. Our Triumph Lice Remedies and Poultry Foods will make it easy sailing. Write today for circulars.

ELMDALE FARM, C. L. DUFFIELD, Prop.

Room 11, Commercial Bldg., Marshalltown, Iowa

This is it.

SHAW'S CONVENIENT LEG BAND

pleases everybody. You'd discard any other marker made and use it if you saw it. Send for free sample.

It Snaps On. It stays; it's aluminum; it has large raised figures; it's easy to read. Prices: 12 bands, 20c; 30 for 45c; 60 for 75c; 100 for \$1.00. I'll send you letters from poultrymen who know, with samples if you ask it. **H. O. SHAW, Box 103, GRINNELL, IOWA.**

Periodic Pains.

Dr. Miles' Anti-Pain Pills are a most remarkable remedy for the relief of periodic pains, backache, nervous or sick headache, or any of the distressing aches and pains that cause women so much suffering.

As pain is weakening, and leaves the system in an exhausted condition, it is wrong to suffer a moment longer than necessary, and you should take the Anti-Pain Pills on first indication of an attack.

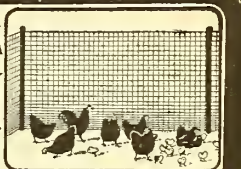

If taken as directed you may have entire confidence in their effectiveness, as well as in the fact that they will leave no disagreeable after-effects.

They contain no morphine, opium, chloral, cocaine or other dangerous drugs.

"For a long time I have suffered greatly with spells of backache, that seem almost more than I can endure. These attacks come on every month, and last two or three days. I have never been able to get anything that would give me much relief until I began the use of Dr. Miles' Anti-Pain Pills, and they always relieve me in a short time. My sister, who suffers the same way, has used them with the same results." **MRS. PARK.**
721 S. Michigan St., South Bend, Ind.

Dr. Miles' Anti-Pain Pills are sold by your druggist, who will guarantee that the first package will benefit. If it fails he will return your money. 25 doses, 25 cents. Never sold in bulk. **Miles Medical Co., Elkhart, Ind.**

Union Lock Poultry Fencing

PICKETS LOCKED IN CABLES

Can't slip, but stretches perfectly to fit uneven ground. Fine meshes at bottom for little chicks. High as you want it, 1 to 7 ft. A poultry fence for all fowls that does not sag.

We sell direct to Farmers and Poultrymen. Prompt Shipments at Factory Prices. Mills in Connecticut, Illinois, California. Write for catalogue.

CASE BROS., 28 Main St., Colchester, Conn.

Eggs from imported and prize winning matings. Mating list giving prices and descriptions. Please write me stating wants.

F. A. CROWELL Granger, Minn.

EVEN HEAVY STOCK

Can't molest your poultry if enclosed with Page Poultry Fence. It's made of the same strong quality of coiled wire and woven in the same manner as Page Stock Fences. Heights 4, 5 or 6 feet. Bottom meshes only 1 1/2 inches. **PAGE WOVEN WIRE FENCE CO. Box 5869, Adrian, Mich.**

Classified Ads.

Under this heading ads will be inserted for five cents per word each month for less than three months, **three cents per word for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. Commencing with the January, 1904 issue, all ads will be inserted under **classified headings.** No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 15th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. **AMERICAN POULTRY JOURNAL** is furnished every advertiser during the time his ad is running. **Forty thousand per month.** We guarantee an average monthly circulation of 40,000 copies of **AMERICAN POULTRY JOURNAL.** When placing your ads remember that advertisers of Classified Ads get better returns from **AMERICAN POULTRY JOURNAL** than from any other poultry journal—none excepted.

On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

HOOPESTON, ILLINOIS

Wyckoff's S. C. White Leghorns

Acknowledged everywhere the world's greatest laying strain; unequaled in standard qualities.
Without question the most profitable strain of poultry in America today. 1000 extra choice
yearling hens mated with grand, strong, early hatched cockerels must be sold at once to make room.
They are the ideal breeding matings for season of 1906, and we will make special inducements in prices to
early purchasers. When writing for prices and catalogue please state plainly just what is wanted. Address

WYCKOFF'S FARM,

Aurora, Cayuga Co., N. Y.

"MONEY in POULTRY."

Our new 84-page book for 1905 tells how to make it; also
how to breed, feed, grow and market your poultry for
best results. This book probably gives more reliable
information about the poultry business, obtained from
actual experience on the largest farm in America devoted
exclusively to the rearing of pure-bred poultry, than any
other book published. Describes and illustrates 25 varieties
of our pure-bred fowls. Quotes extremely low prices on
stock, eggs, incubators and brooders. Mailed for 4c in stamps.

FRANK FOY, Box 50, DES MOINES, IOWA.

\$300

If you are looking for a brooder that is a success from the
start, that will enable you to have enough of them to prop-
erly care for your chicks, and will not cramp your purse,
that is easy to clean, and one that applies the heat direct
to the backs of the chicks. Send for free catalogue to the

PERFECT BROODER SHOP

CELORON, NEW YORK

System in Poultry Practice

BY JAMES
Shackleton.

30 Chapters, 147 Pages, One Dollar, Postpaid.

May 1, 1905. Sales of this book since Sep. 1, 1904—eight months—are larger than for preceding 18
months. It is meant to appeal to common sense and evidently succeeds, for increase is chiefly in places
where it has gone before. California always took more than any other state, and now takes more than
any other three. Canada has many and now takes more than any state but California. Even Australia
takes many. This book has been sold in every state of the Union, except two southern states, and Alaska.
In Canada, Newfoundland, P. E. Island, New Brunswick, Nova Scotia, Quebec, Ontario, Manitoba, As-
siniboia, Alberta, British Columbia and Vancouver Island. In Cuba, Hawaii, Philippines. In England,
Belgium, Germany, Australia, New Zealand and China. It is meant to be of equal value in every climate,
for whatever purpose fowls are kept, and evidently is so regarded. Sales are increasing rapidly every-
where. Enthusiastic testimonials are plentiful.

The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON, Box A 12, Milburn, New Jersey

HOUDANS!

For more than thirty-one years Rigg's strain of Houdans has been the acknowledged
standard of Houdan excellence by all Houdan breeders and exhibitors at ALL the
leading shows of New York, Boston, etc., have drawn largely upon this strain. The
record made by the Rigg strain during all these years has never been approached
by any breeder.

Mr. Thos. F. Rigg, Iowa Falls, Iowa.

Driftwood Farm, Girdletree, Md., Dec. 17, 1904.
Dear Sir:—In 1898 I obtained in Colorado three Houdans that were purchased of you. I
took them to Brazil, where they were practically unbeaten by the best English strains, to
say nothing of breeding a lot of youngsters that hustled their Minorcas in egg production.

WALDO KENNARD.

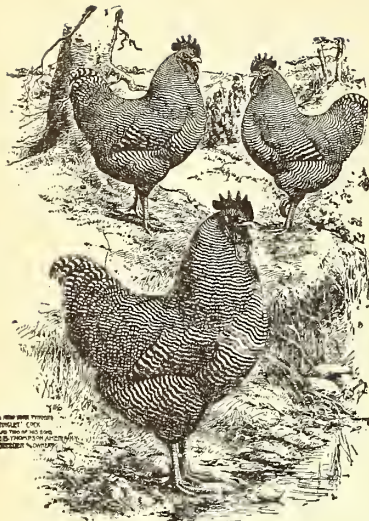

This is the kind YOU want—the large, vigorous, egg-producing, show winning kind.
More than 31 years of careful, systematic, line-breeding has given us this magnifi-
cent strain of Houdans.

EGGS FOR HATCHING THAT WILL PRODUCE SUCH STOCK

We have no special pens in reserve for ourselves and other pens for our customers.
The same pens that supply us with our many winners and magnificent breeding
birds, supply our customers with eggs. Price of eggs \$3 per setting, two settings \$5.

THOS. F. RIGG

IOWA FALLS, IOWA

A "Ringlet" 1st Prize New York Cock and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation, Madison Square Garden, New York, January, 1903.

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 87 prizes. 36 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

in any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

ECCS FROM PRIZE MATINGS.

1 Sitting, \$5. 3 Sitings, \$10.
2 Sitings, \$8. 5 Sitings, \$15.
Per 100, \$20.00.

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others. My matings this season are the best I ever owned. * * * * *

At the Great National Show, WASHINGTON, D.C., in hot competition with over 300 birds of these varieties, the best that could be found regardless of price, I won 45 Regular and Special Prizes or 39 Entries, including First Prize on Breeding-Pen in each variety, Special for Best Display in the American Class, Special for Best Exhibit of Plymouth Rocks, Sweepstakes Special for Best Cockerel in the show (Bantams excluded), and this on my First Prize Barred P. Rock Cockerel. My winning White Wyandotte cock was pronounced by the judges to be the best they had ever seen. I won twice as many first prizes as all other exhibitors of these varieties. My BUFF ROCKS, at Boston, 1899, in hot competition, won more first and special prizes than all others. My customers are winning all over the country. If you want the BEST, write me. Hundreds of Choice Exhibition and Breeding Birds at Honest Prices. Catalogue of America's finest Plymouth Rocks and Wyandottes free.

We Can Teach You How to RAISE POULTRY PROFITABLY

If your poultry isn't paying as it should, you are making costly mistakes. Our course of Instruction will quickly teach you how to make any yard (large or small) pay from 25 per cent to 50 per cent profit. Your knowledge and ours combined will make you successful. The individual home lessons, delivered regularly at your very door, are prepared by practical poultrymen who have by actual experience mastered the problems which worry nine-tenths of all poultry raisers. You get no theoretic instruction. After a little study you can discover your errors and overcome them. The directions are easy to understand and follow, and big paying results are sure. If you want to qualify yourself as manager of a poultry yard and accept one of the

MANY LUCRATIVE POSITIONS

we have on our records, our Course of Instruction will soon make it possible. Poultry Culture is not drudgery when rightly conducted. It is a healthful, profitable, enjoyable vocation for man or woman. Write for interesting free literature at once. Ask for circular showing some of the good paying positions we have open for competent men.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.
Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

Study Fence Construction

Construction is important. Advance Fence is made with a continuous stay—thus preserving and utilizing *all* the strength of the wire, about half of which is wasted in fences with cut stays. Consider this and you will understand why Advance is stronger. Advance Fence has the most perfect provision for expansion and contraction. Advance stays do not slip. We use only the best grade of galvanized steel wire.

We sell on 30 days' free trial. If you don't like Advance Fence, and if it is not exactly as represented in every way, return it to us at our expense and get your money back.

Why not deal directly with the manufacturer and get wholesale prices? We pay freight to your station and guarantee safe delivery.

Advance Fence Co., 1367 Old St., Peoria, Ill.

ORIGIN AND HISTORY OF THE BREEDS

Source of the Various Varieties of the Plymouth Rock Family—The First Fowls to Bear This Honored Name Were a High-Bred Cross, a Mingling of Cochin-China, Dorking, Great Malay and Wild Indian Bloods—They Were First Shown at Boston in 1848-9 by Dr. John C. Bennett, the Originator—Were Not Again Exhibited and Soon Became Extinct—The True Facts Regarding the Origin of the Present Race of Barred Plymouth Rocks—Many Claim the Honor of Having Originated the Popular Fowls—Other Varieties of the Family of Recent Origin—Breed Characteristics.

Paper No. 3.—All Varieties of Plymouth Rocks.

Written by Thos. F. Riggs, Associate Editor American Poultry Journal

As firmly anchored in the hearts and affections of the American fanciers and breeders as the rugged rocks from which they take their name are held in the stormy Atlantic the Plymouth Rock fowls are the nation's pride and boast. We all love them. We created them. They are all our own. The Barred Plymouth Rock is today the most plentiful of all standard-bred fowls. They are to be found in the yards of the ultra-fanciers, on the farms and in the cottagers' homes. The supply of choice Barred Rocks for breeding and exhibition purposes is not equal to the demand. Prices for extra choice specimens of this variety range higher than for like specimens of other varieties and breeds. They are bread-winners. They have never disappointed the breeders who have given them proper care. They are immensely popular on the farms, and for this reason Barred Rock breeders can dispose of their surplus stock to better advantage than can the breeders of other varieties of fowls.

The fowls upon which the name Plymouth Rocks were first bestowed were only a high-bred cross, shown on Boston Common in 1848-9 by Dr. John C. Bennett. They were not shown again, and disappeared. They were a cross of Asiatic fowls and the Dorking. Dr. Bennett in 1853 thus described his creation. Note carefully his description of these fowls which in no way resemble the Barred Rock of today. Dr. Bennett said:

"I have given the name Plymouth Rock to a very extra breed of fowls, which I produced by crossing a cockerel of Baylies' importation of Cochin-China with a hen, a cross between the fawn-colored Dorking, the Great Malay, and the Wild Indian. Her weight is six pounds and seven ounces. The Plymouth Rock fowl, then, is, in reality, one-half Cochin-China, one-fourth Fawn-colored Dorking, and one-eighth Wild Indian; having five primitive bloods, Shanghai, Malay, Game, Turkish, and Indian, traceable by referring to the history of these breeds and their crosses respectively. There are several of plumage is rich and variegated; the cocks, usually red or speckled, and the pullets darkish brown. They are very fine fleshed, and early ready for the table. Their legs are very large, and usually blue or green, but occasionally yellow or white, generally having five toes upon each foot. Some have their legs feathered, but this is not usual. They have large and single combs and wattles, large cheeks, rather short tails, and small wings in proportion to their bodies. They are domestic, and not so destructive to gardens as smaller fowls. There is the same uniformity in size and general appearance, at the same age of the chicks, as in those of the pure bloods of primary races. The demand for this breed has exceeded all others during the season, and they have been sent into most of the New England states and western New York."

A Mr. Burnham in a communication to the Massachusetts

Plowman, a little later in the same year thus described his Plymouth Rocks:

"The cock here represented weighs nine pounds and a quarter and the two pullets thirteen pounds. I am daily more pleased with this fine species. I have the Plymouth Rocks at all ages, from a few days up to about eight months old, and my specimens embrace five or six broods. The color of all of them is particularly uniform, and I am satisfied that the variety (or breed) is now well established. The body plumage on the pullets is a rich deep brown, speckled with golden-tipped feathers; the under down is black (or a deep blue-black), and the tail is brown, black and gold.

"The legs of the pullets are very dark colored, and one-half of them, or more, are five-toed, but some of them do not come so. The comb is single, and the wattles thin and small. The head and neck are well formed, the legs are shorter than the average of fowls, and the hens are not only deep and broad-chested, but the bodies are proportionately long.

"The roosters are noble birds—among the finest I have ever met with. I have two well-grown crows, very similar in their appearance, carriage, color, size and general points.

"I am satisfied that the Plymouth Rock fowl, properly bred, will become a most valuable one to the poulterer or the agriculturist; and I believe that a pair of the specimens I now have will weigh eighteen pounds or more by next spring. I deem this ample, for a size, and, with the other good qualities of these fowls for laying, quietness, easy keeping and hardiness, I think these qualities will cause them to rank among the very best fowls in our country, eventually.

"The plumage of the roosters is dark red hackles, on neck and rump; the legs are bright yellow, slightly feathered; the body dark red and green, relieved with stray feathers of a golden tint; the under portion of the body and breast is a rich, deep, glossy blue-black—partaking of the plumage of the Wild Indian fowl, the original cross. When in full plumage the tail feathers of the male are heavy, which gives him not only a much larger proportionate appearance, but very greatly improves his form."

Mr. Bennett's production never attained the dignity of a race of fowls, and in a very few years became extinct, the first fowls to bear the honored name of Plymouth Rocks being but a passing shadow.

The nucleus of the breed as known today made its appearance in the exhibition of a trio of fowls "in color bluish-gray, barred in lines of a darker blue," exhibited by D. A. Upham at Worcester, Mass., in the show season of 1868-9. These were christened Plymouth Rocks. They were the first fowls of the name to become thoroughly established as to size, shape and color markings. They were the American's fanciers' first creation. This trio was purchased by Mr. C. C. Lowring, and were put into the yards of the late Mark Pitman, who carefully bred them until 1876, when the entire flock was sold to I. K. Felch, of Natick, Mass. These birds were subjected to matings of stock known as the Gray and Drake strains. Eight of the best birds were placed on the town place of Mr. H. B. May, where these cross matings were made, the Mark Pitman birds being given the control of blood lines, which in 1878 produced the Plymouth Rock proper, a race of fowls in color bluish-gray, barred in deep blue lines. Specimens of this breeding were largely the winners in the exhibition halls for the following ten years, and were the foundation of the crosses resorted to by several breeders who have become prominently identified with the breed. These were the birds that become noted as the Essex strain. Their fame spread, and this brought to the surface many who were anxious to secure the honor of originating the breed. Several so-called strains were brought to public notice, each claiming a somewhat different crossing of the pure blood, or established Plymouth Rock fowls—all the color of the American Domini-

ques—which must be conceded as the source of supply of the color of the Plymouth Rocks. These co-called strains were made as follows:

No. 1. Black Spanish sire with White Cochins. These half-bloods were bred to American Dominiques.

No. 2. Black Spanish male bred to Gray-Dorkings, top-crossed with American Dominiques. These were known as the Gray strain of Plymouth Rocks. Many showed the salmon breast of the Dorking.

No. 3. American Dominique males with Buff Cochins— the color results being the influence of the Dominique blood. These were a controlling force in what was afterwards known as the Raudall strain.

No. 4. White Birminghams (an English fowl) with Black Spanish, the result subjected to Dominique males.

No. 5. White Birmingham-Black Java females produced from the No. 4 groups. The first cross produced birds white, black and Dominique. It was these that were selected and bred to group No. 4. A large proportion of the stock produced by this mating came in the Dominique color, and gave the best results of any of the foregoing mating or crosses.

No. 6. A Mr. Drake bred into this Upham creation Dark Brahma blood, producing one of the most phenomenal trios, and one that was never beaten in the show room. It is said that from black females which came from this cross were produced a large portion of the winners of that time. At the death of Mr. Drake the four females went into Mr. Philander Williams' hands. One other male, the product of a Dark Brahma hen and a Pitman male, produced a cockerel that was never defeated in the show room. These were incidents of the time between 1869 and 1878.

These are the facts, as nearly as can at this date be ascertained regarding the origin of the Barred Plymouth Rocks.

Mr. C. E. Thorn, in 1886, in *The Complete Poultry Book*, said:

"Several years after the extinction of Dr. Benuett's Plymouth Rocks, a new breed sprang up, apparently simultaneously, from several parts of New England, and, as a matter of course, as soon as the breed had had time to prove that the most valuable cross of a century had been made, numerous claimants arose for the honor of having originated it, and a second 'Light Brahma' war was waged with great determination, one party claiming that a Mr. Spaulding, of Putman, Conn., produced the genuine Plymouth Rock in 1866 by a cross of a hawk-colored dunghill cock and an Asiatic hen. Another party claimed to having used Dominique and Black Java fowls in the making of the breed. Upon this point the editor of *Poultry World* wrote in March, 1876:

"When the smoke has cleared away it will be found that this breed (Plymouth Rocks), has had several independent origins. As oil and potash may be united and soap made ever anywhere, so hawk-colored barnyard fowls may be amalgamated with some Asiatic variety in any state in the Union and Plymouth Rocks formed.

"Mr. A. H. Drake, of Stoughton, Mass., has a strain of Plymouth Rocks which he has bred for nineteen years, which has not a drop of the Spaulding blood, nor the slightest admixture from any other strain. We have word from a Pennsylvania correspondent that on farms in Bucks county, that state, fowls have been found almost from time immemorial, that were identical with Plymouth Rocks, and were produced, incidentally, by the introduction of Asiatic blood into the common hawk-colored stock of the county. It must be kept in mind that upon many farms in all parts of the land, twenty, fifty, or one hundred years ago, hawk-colored fowls were numerous and common. The modern Dominique fowl is nothing more or less than a hawk-colored dunghill bird, improved by cultivation. For that matter the Leghorn is a genuine Italian dunghill fowl, improved."

At the time the editor of the *Poultry World* wrote the above lines he was in the thick of the fight then being waged as to the origin of the Barred Rocks, and can not, as a matter of fact, he considered a reliable historian. Still there is a great deal of truth in what he says. The truth of the facts as we have here given them will stand any test the searcher after historical truth may make.

WHITE PLYMOUTH ROCKS.

White Plymouth Rocks made their appearance in 1875, in the yards of Mr. Oscar F. Frost, of Monmouth, Maine, a breeder of Barred Rocks. Mr. Frost claimed they were sports from his Barred Rocks. He exhibited some of them at Bangor, Maine, in 1876. Referring to that exhibit Mr. I. K. Felch says:

"I was acting as judge at that exhibition. A trio of these White Rocks were offered to me, but I foolishly declined to accept them. However I advised Mr. Frost to continue to breed them, for, as I told him, he would have no trouble with

the color. These are the fowls which waded through deep mire in subsequent years, before they were admitted to the Standard and their good qualities became known, and the variety accepted by fanciers. The Barred and the Whites are the only Plymouth Rocks of absolute purity of Plymouth Rock blood. All others are of recent origin, and the original birds known to many of the present generation. While known as Plymouth Rocks they (the Buff, Partridge and Silver Penciled) have not a drop of Plymouth Rock blood in their veins. They are interlopers in the family—adopted children."

BUFF, PARTRIDGE AND SILVER PENCILED VARIETIES.

These varieties of the Plymouth Rock family are creations of today. The foundation of the Partridge variety is the Partridge Cochins, many different crosses being employed. The Silver Penciled variety is founded on the Dark Brahma.

There were two original strains of the Buff Rocks. J. D. Wilson, Worcester, Mass., was the originator of one of these strains. His were produced by Buff Cochins-Light Brahma crosses. At Fall River, Mass., N. B. Aldrich and R. G. Buffington produced birds known as Buff Rocks. They were a combination of White Rocks and Rhode Island Reds. These different strains were united and the result was the accepted Buff Rocks. Dr. Aldrich and Mr. Buffington exhibited their productions at Providence, R. I., in December, 1890. Dr. Aldrich called his Golden Buffs. Mr. Wilson exhibited his as Buff Rocks at the World's fair, 1893. They were exhibited by other persons in 1892 in the eastern shows.

BREED CHARACTERISTICS.

Standard weights of all Plymouth Rocks: Cock, 9½ pounds; cockerel, 8 pounds; hen, 7½ pounds; pullet, 6½ pounds.

Disqualifications: Positive white in ear lobes; red in any part of the plumage; two or more solid black primaries, secondaries or main tail feathers; shanks other than yellow; with due allowance for fading with age, dark spots not to disqualify.

In shape the Standard requirements are the same for all varieties of Plymouth Rocks. Plymouth Rock shape is distinctive. The Rock is built on straight lines. The Wyandotte is a bird of curves. The Rock body should be long, broad, deep and full; back rather long, rising with slight concave sweep to tail; breast, broad, well rounded; comb, single, upright, with five points.

Color of the Barred Rock should be modified black and white in all sections, the bars narrow, regular, and running parallel across the feathers, the overlapping of the feathers producing a blue tinge. The color should be the same in all sections, each feather being barred its entire length—to the skin.

The White Rock must be pure chalk white in every section.

The Buff variety must carry a plumage of rich golden buff of even shade throughout, free from shafting or mealy appearance. The head, neck, hackle, back, wing-bows and saddle richly glossed with a metallic luster. The undercolor a lighter shade. This for the male, and female.

The Partridge Rock must carry the penciling of the Partridge Cochins.

The Silver Penciled variety has the markings of the Dark Brahma.

The Partridge and the Silver Penciled varieties were very kindly received last season in the show rooms of the country. That they will be pushed and become popular seems certain. They are very beautiful creations. While they possess intrinsic value their place will be that of fanciers' fowls.

THOS. F. RIGG.

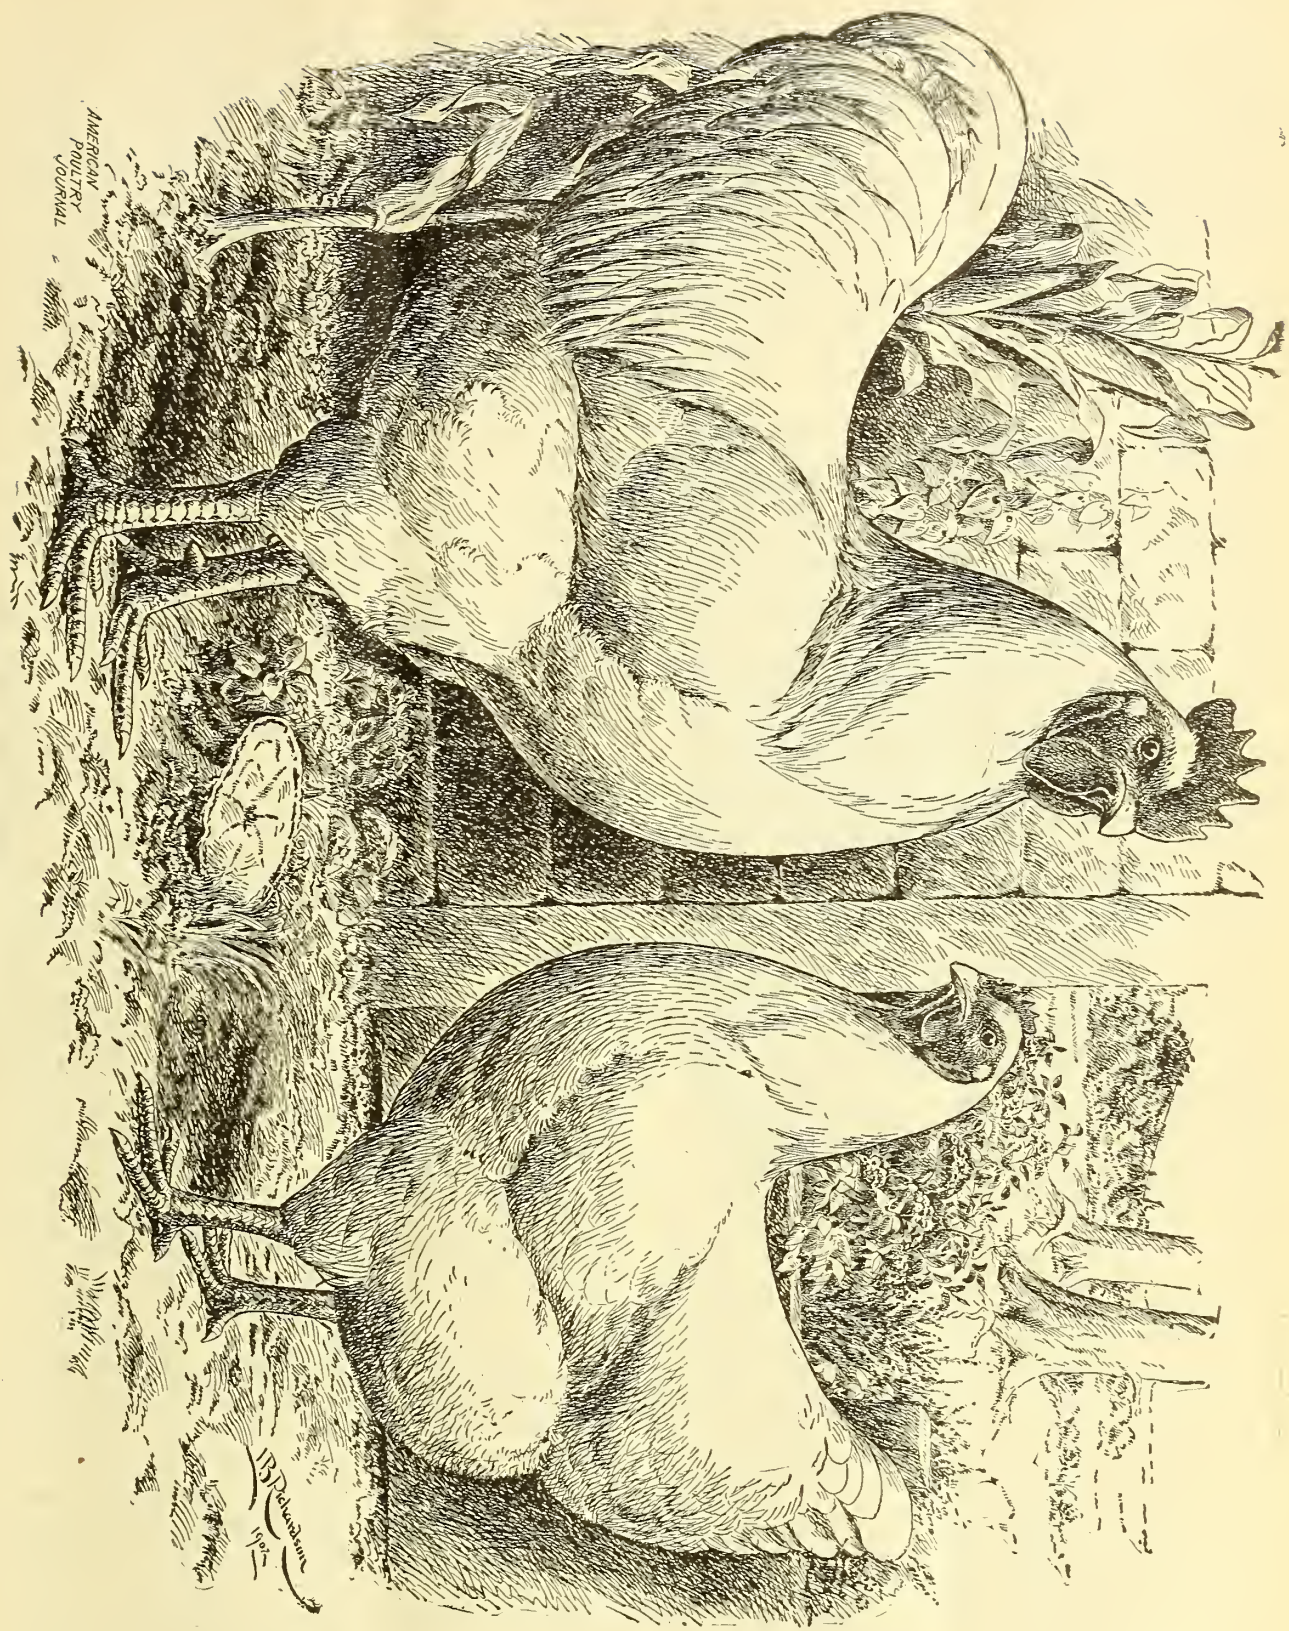

Mr. Felch says that the pullet that commences to lay earliest in life is the one to lay the largest number of eggs through life, as cattle that have the milk-producing organs active make the best cows. Select the fast-growing, early-matured specimens that present in full the type and size found in the breed, and use only these as breeders, and the egg-producing merits will be increased. It is care and attention to the flock that finds and secures these merits in the progeny. Neglect and haphazard breeding never pays.

Almost infinite are the reasons for dead chicks in the shell. The incubator manufacturer is not the responsible party. If the incubator will produce sufficient heat, will permit of accurate regulation of heat and will permit a wide adjustment for ventilation, the manufacturer has done his part. The rest of the responsibility rests with each individual operator and breeder.

The commission man is apt to be kicked for cutting the price of the poultry shipped, when the fault really belonged at home. Not all commission men are dishonest. They are more apt to tell good salable stock than the shipper.

AMERICAN
POULTRY
JOURNAL

IDEAL WHITE PLYMOUTH ROCKS.

Monthly Prize Article Department

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

*The first prize in the contest this month has been awarded to A. V. Meersch, Poughkeepsie, N. Y., and second prize to J. C. Miller, Topeka, Ind.

FOWLS IN BAD WEATHER.

When the weather is rainy or boisterous a fowl is a particularly wretched looking object. Directly rain commences the poultry will be seen with drooping tails, hurrying off to the nearest shelter. If there is no protection from the wet they will stand close together, huddled up, wet through and the picture of misery. In a farmyard there is almost invariably a barn or other outhouse where the birds can get out of the rain and wind and remain in comparative comfort. But in hundreds of small confined runs in which the majority of poultry lovers have to keep their fowls there is, as a rule, no protection whatever.

The small houses having a space underneath, which can be purchased from many appliance makers, are very useful in this respect. But the ordinary home-made little houses and runs seldom have any provision for a rainy day, so the unfortunate birds either have to stand out in the open or crowd into the roosting house. The moist heat engendered by their damp bodies is liable to promote cold and roup under such conditions. The value of having the house ventilated under the roofs is specially apparent in wet weather. Cleanliness too, must be observed with the birds remaining in the house most of their time. An excellent material with which to cover the floor is moss spread three or four inches deep. It absorbs the moisture, is dry and warm for the feet, is clean and can easily be cleaned with a rake or trowel. During a continuance of wet weather, as we have in New York state just now and probably in other states as well, the run becomes very sloppy and sodden with the movements of the fowls. To prevent this, the coal ashes from the house should be thrown on, particularly around the edges of the runs and near the door where the birds assemble mostly expecting to be fed. In some neighborhoods an idea prevails that the ashes produce disease among the poultry. How this originated is difficult to imagine. It is simply one of the senseless beliefs that are so hard to eradicate.

The question is often asked, whether the poultry run should be dug up frequently, so as to give a change of soil, or whether it should be left as it is? Digging it up is a very doubtful benefit, the worms and insects that are exposed when the earth is turned over afford much pleasure to the fowls and the scratching exercise is good for them, but the surface becomes very uneven and difficult to clean. The rain also ponds in the little hollows and the ground becomes more sticky and muddy with the constant treading about of the fowls. It soon becomes sour and tainted. Instead of digging up the run it is more satisfactory to beat the earth as hard and as level as possible and then to throw on this plenty of ashes and coarse grit. If the surface of ashes is dug out and removed occasionally and replaced by fresh, the run will last untainted much longer.

During bad weather it is better to give the poultry that are confined in small runs their food from a trough or some such vessel. If the food, both grain and meal, is thrown on damp ground a quantity of offensive matter will adhere to it and be swallowed by the birds. The dust bath must be kept dry and well filled with sand or sifted earth. A few old sacks thrown over the top of the run will keep out a lot of the rain. The front also can be protected by a few boards nailed together and made into a screen, which can be temporarily fastened to the wire during bad weather.

A. V. MEERSCH.

Poughkeepsie, N. Y.

A PLEA TO INSTILL KNOWLEDGE—MAJORITY IGNORANT.

The world is rapidly advancing. New lessons are learned every day; new discoveries are made; new knowledge goes into

print—on record; new inventions hasten the speed. The old sickle lies on the shelf only a witness of a time that has gone by. We question whether poultry knowledge is increasing at the same ratio. The people are not educating themselves along these lines. The majority (at least in these parts) are in the dark. Of course there are some who have created an interest and are conducting the business to success. The farmer here holds poultry in the background. Where, would he look over the world and comprehend its maneuverings, would he make it first. We cannot refrain from giving example before proceeding farther. We call at his home, we see what he calls his poultry house, away back from the house; you can see through at the first glance. Small; shed-board roof, boards hanging loose; no windows. Is that your poultry house? Yes. We start to go in and are almost struck down with the odor that meets us. No nests. His flock of mongrels are pale and wild as deers. If per chance they lay they must make their own nests. We question him farther. What variety of chickens have you? Oh! they're mixed. How many have you? Oh! we've got quite a lot of 'em; the women maybe can tell you; they know more about the chickens than I do. How many eggs do you get? Oh! we get about a dozen a day. They had the cholera last spring, but they kinder got over it. Have you many young chicks? Yes; quite a few. What percent of your hatch do you mature? I can't exactly tell; we have to hatch about 150 to raise 40; they'll always so many die any way. How and what do you feed? Oh! in the summer we don't feed them at all; and in winter we sweep the snow away nice and feed them corn. We never get any eggs in winter. Do you aim at egg production or raise them for market? We keep 'em for what we can get out of 'em. Do you take any poultry papers? No.

We, being great lovers of poultry, depart in disgust. Such cases are very common. At our last Farmers County Institute a poultry discussion was desired and only one or two were found that could handle the work. I say a great many are in the dark; they cling to the old ideas.

I have diagnosed the case, now here is the remedy. With little expense one can equip himself with enough literature to master the work. Get one or more of the many good poultry journals (The AMERICAN for one). There are many good courses offered by the different schools one can take through the mail. The Government bulletins can be had free. Associations can be formed in neighborhoods as well as the press. Classes can be organized and taught as music is taught. The lessons of centuries, past experience must be learned. The hen must be understood. She is universal; she is found in most every corner of the earth. The greatest features of the hen question are pleasure, profit and small investment. Many a young man's business facility lies undeveloped because he has no means at hand. Let us consider. Good eggs are one of the staple foods and always will be; palatable as well as the most nutritious food that can be had. There are millions of mouths to feed, the demand is great; it can't be overdone. It is safe to embark. "Look before you leap." Go slow. Get for a basis good stock—not one that has been poorly bred, stunted in growth, polluted with disease, and if you have the knowledge you are safely launched and ready for real experience. Well, says one, a good house will cost \$80 or more. Even if it does; say the house would last 40 years. It would be equivalent to rent at \$2 per year. The profits from one hen would almost pay that. I am a beginner and if this finds welcome in the columns of the A. J. will come again.

Topeka, Ind.

J. C. MILLER.

The "secrets for egg production consist in a good supply of grit, good health, plenty of exercise, pure food, green food, fresh water, cut clover hay and green cut bone, freedom from lice, regularity in feeding, cool houses in summer and warm ones in winter, and breeding only from the best laying stock."

Some turkey raisers find it more profitable to market the young toms in December, as they will usually fall in price after the holidays. They keep the hens until later, as they increase in weight and subsequently command a better price.

Experiments have proved that excessive feeding of middlings is apt to produce small-sized eggs. This, no doubt, is caused by the fact that middlings generally increases egg production.

It is a mistake to try to raise ducklings with a common hen. Hens make good duck incubators, but poor brooders; the ducklings cannot stand the violent exercise the hen would give them. They are too weak on their legs to keep up with the activity of the mother hen.

THE TURKEY.

Its Origin and Introduction Into Europe—Some Interesting Information Gathered from Everywhere.

Written by Rev. C. E. Petersen, Franklin, Me.

At what time the domestic fowl was first introduced into England is unknown, but there is a tradition in Cornwall that it was originally brought to that part of the coast by the Phenicians when they came to traffic for tin and copper with the natives, previous to the Roman invasion; and to this day, in some parts of the country, it is called the Persian lird, but why, this latter, does not appear; and further, it is especially noted by Cesar ("De Bello") that the cock, the goose and the hare were among, if not the whole of, the domestic animals of the ancient Britons, and kept by them for pleasure only before his invasion of the country, but that soon after their scruples in this direction disappeared.

However that may be, it is certain the Romans brought with them "the fighting cock," both to the south and the west of England; clear proof of which are the bones, nay, the very metal spurs used in their contests, that have been found both in Surrey and Cornwall.

One metal spur was dug up in Southwark, and a pair in an old Roman wall in the latter county, besides others that unfortunately were not preserved or sufficiently noted.

That these same ancients were not acquainted with the turkey goes far to settle the somewhat disputed question, whether the turkey is a native of this country or not, being now taken for granted by all naturalists and historians that the new world was its birthplace, and from there was introduced into the old world.

It is interesting to note the mention of these birds in the writings of the old historians, a few of which follow.

The first author in whom any mention is made of the turkey is Oviedo, who wrote about the year 1525. He has described them minutely with that curiosity and attention which new objects generally excite; and as he was acquainted with no name for these birds, till then unknown to the Europeans, he gave them that which he thought best suited to them. He calls them a kind of peacock, and he relates that even then, at this early date, on account of their utility, and the excellent taste of their flesh, they were not only reared and domesticated by the Europeans in New Spain, where they were first found, but that they were carried also to New Castile and to the West India Islands.

Lopez de Gomara, whose book was printed in 1553, makes use of gallopavo; and says that the fowl resembles in shape the peacock and the domestic cock; and that of all the fowls in New Spain its flesh is the most delicious.

In the year 1584 wild turkeys were found in Virginia, and Rene de Laudonniere found them on his landing in North America in 1564. Fernandez also reckons them among the birds of Mexico; and takes notice of the difference between those that were wild and those which had been tamed. Pedro de Cieza saw them on the isthmus of Darien, and Dampier in Yucatan; beside the testimony of many other travelers, which is hardly worth while noting, shows the early date of its domestication.

An account by Smyth deserves notice; he visited Pennsylvania in 1784, and says:

"The wild turkeys run about here in the woods. Their wildness excepted, they are in nothing different from ours, but in being generally larger, and in having redder flesh, which is, however, superior in taste. When anyone finds their eggs in the woods and places them under a tame hen to be hatched, the young, for the most part, become tame also; but when they grow up they make their escape. On this account people cut their wings before they are a year old. These wild turkeys when tamed, are much more mischievous than those from domesticated birds."

Smyth assures us that wild turkeys are so abundant in the uncultivated country back of Virginia and the southern provinces that they may be found in flocks of more than 5,000.

The earliest account of them in Italy is contained in an ordinance issued by the magistrates of Venice, in 1557, for repressing luxury, and in which those tables at which they were allowed are particularized. About the year 1570 Bartolomeo Scappi, cook to Pope Pius V, gave in his book on cookery several receipts for dressing these expensive and much esteemed fowls.

That they were scarce at this period appears from its being remarked that the first turkeys brought to Bologna

were some that had been given as a present to the family of Buonocompagni, from which Gregory XII, who at that time filled the papal chair, was descended.

That these fowls were not known in England in the beginning of the sixteenth century, is very probable; as they are not mentioned in the particular description of a grand entertainment given by Archbishop Nevil; nor in the regulations made by Henry VIII, respecting his household, in which all fowls used in the royal kitchen are named.

They were, however, introduced into that country about the above period; some say in the year 1524; others in 1530; and some in 1532.

We know, at any rate, they were served up at a great banquet in 1555; and about 1585 they were commonly reckoned among the number of delicate dishes, and we have the following from "Tussers Five Hundred Points of Husbandry," published at that date:

Beefe, mutton and porke, shred pies of the best,
Pig, veale, goose and capon and turkey well dressed;
Cheese, apples and nuts, jolie carols to heare,
As then in the countrie, is counted good cheare.

H. N. Hanchett's Buff Cochon cock "Wonder," showing the possibilities of the Buff Cochon when bred along scientific lines. Pronounced by experts to be one of the best Buff Cochon males in the country.

There was another edition of Tusser published in 1557, but no mention is made there of the turkey, so it is positively sure that some time between these two dates the turkey was introduced into England from the colonies.

According to the account of some writers, turkeys must have been known much earlier in France; but on strict examination no proof of this can be found. The earliest period assigned for their introduction into that country is given by Beguillet, who confidently asserts that they were brought to Dijon under the reign of Phillip the Bold, about the year 1385.

Had this French author quoted his authority, we might have discovered what gave rise to his mistake; but as he does not, one cannot but help to think that the whole account is a fiction of his own which was not a very strange proceeding in those times.

De la Mar also is in error when he relates that the first turkeys in France were those which Jaques Caur, the well known treasurer to Charles VII, brought with him from the Levant, and kept on his estates in Gatinois, after he had received the king's permission to return to the kingdom.

This Caur, however, who was banished in 1450, never returned, but died in the island of Chio in the year 1456.

Equally false is the account given by Bouche in his "History of Provence," that Rene, or Renatus, King of Naples and Duke of Anjou, first brought turkeys into the kingdom.

and reared them in abundance at Rosset. This author gives as his authority the oral tradition which certainly cannot be put in competition with testimony of a more authentic nature.

Another Bouche, who wrote later (1785), a "History of Provence," and who has collected many things that do honor to Renatus, makes no mention of this service, though he could not be ignorant of what had been before related by his namesake.

Had these fowls been known so early as the time of that monarch, who died in 1480, it is impossible that they could have been so scarce in France as they really were about a hundred years after. The assertion often repeated, but never proved, that they were first brought to France by Phillip the Chabot admiral under Francis I, is much more probable.

Chabot died in 1543; and what Scaliger says, that in 1540 some turkeys were still remaining in France, may be considered as alluding to the above circumstance.

This much, however, is certain, that Gyllius, who died in 1555, gave the first scientific description of them, which had been given shortly before his death, and which were made use of by both Gesner and Aldrovandus in their works on Ornithology. The same year the first figure of them was published by Bellon.

About the same time they were described also by La Bruyere-Champier, who expressly remarks that they had a few years before been brought to France from the Indian islands discovered by the Portuguese and the Spaniards.

How, then, could Barrington assert that this Frenchman meant the East and not the West Indies? They must, however, have been a long time scarce in France; for, in the year 1566, when Charles IX passed through Amiens, the magistrates did not disdain to send him, among other presents, twelve turkeys. This information seems to agree with the account often quoted, that the first turkeys were served up, as a great rarity, at the wedding dinner of that monarch in the year 1570; but it seems the breed of these fowls was not very common under Charles IX, for they are not named in the ordinances of 1563 and 1567, in which all other fowls are mentioned.

In the year 1603 Henry IV caused higglers to be punished who carried away turkeys from the country villages without paying for them, under the pretense that they were for the use of the queen.

As these American fowls must have been carried to Germany through other lands, we cannot expect to find them in that country at an earlier period.

Gesner, who published his work in 1555 on Ornithology, seems not to have seen them.

We are, however, assured by several authors, such as B. Heresback Colerus and others, that turkeys were brought to Germany so early as 1530; and at the same year carried to Bohemia and Selesia.

Respecting the northern countries, by the authority of Pontoppidan, they had been in Denmark 200 years before his time (1698).

As these fowls are found at present in Asia and Africa, it may be worth while briefly to mention that as much proof can be given that they were not known there until introduced by the Europeans.

And here we will close our article dealing with the great American fowl, that is the fowl par excellence for a Thanksgiving dinner, and for that matter any other dinner, where it may be served.

THE FUTURE OF THE BUFF COCHIN.

The Buff Cochin has had an honored past. As the long-legged shanghai it fairly stalked over this land, awakening enthusiastic admiration wherever it was seen and begetting an interest in poultry that has continued to the present day, it may be regarded as the pioneer of the poultry industry, coming with such a striking appearance, sonorous voice, and lordly bearing as to command and hold the attention of all. Had it not been for the interest which it aroused, and the inspiration which it gave, many of the modern varieties that are now so widely advertised would have continued to crow in the yard of the common dunghill, and never reached the ear of the public.

Since its introduction the Buff Cochin has been greatly improved. In the hands of judicious breeders it has been reduced in height, increased in width, and made a thing of beauty and symmetry far outrivaling anything to be seen in poultrydom, and yet the possibilities of Cochin improvement are only in their initial stages. In all the range of poultry culture or general stock raising there is no field of experi-

mental effort so fascinating as that of Cochin development. Taking into consideration shape, feathering and color there is abundant scope for the exercise of good judgment, keen discrimination, and wise balancing of points so as to evolve in the near future a type of fowl still more artistic and utilitarian. What is now needed more than anything else in my judgment is a grand rally of all Buff Cochin breeders to discuss the ideal Cochin, and the new Standard in its relation to that ideal, and in the presence of live specimens. Letter press description in the Standard or elsewhere is very good when nothing better can be obtained, but the most beneficial and effective way of dealing with this subject is to get together a large number of interested and experienced breeders in a well lighted room with a table or coop in the center on which can be placed one or more Cochins to be carefully handled, examined, criticized and compared with the Standard description of the ideal Cochin. Some points may be emphasized as essential, others as desirable, but not so essential in the development of the coming Cochin, and thus an object lesson given to the whole army of breeders that will tend to unite and focalize their energies in certain well understood and approved directions. Working separately and working without consultation and discussion we are likely to be working at hap-hazard, and perhaps toward almost different results. Is it not time to change this course of procedure and call together a representative body of Buff Cochin breeders to discuss in the most friendly and yet searching manner the defects of present day Cochins and try to harmonize and perfect their conceptions and ideals of what a perfect Cochin should be? I for one would consider it a great privilege to be present at such a meeting and to contribute my humble quota to its success. At the World's Fair in St. Louis a few stalwarts met and organized the American Buff Cochin Club. There was no time then for prolonged and satisfactory interchange of opinions, and it was thought that at the next winter show in Chicago a general meeting could be called, and ample time taken for discussion. Unfortunately this meeting was called at too late an hour, very few attended, and nothing was accomplished that was of material advantage. The time of the next Chicago show is fast approaching and if anything truly worthy is to be accomplished, anything that will fittingly represent the great body of Cochin breeders, then no time should be lost in announcing a meeting of the club and bringing its important objects before the public.

Perhaps the chief good to be gained from such a meeting will be a more definite and harmonious conception of what we should strive for in the future improvement of the Cochin and a more widespread dissemination of that knowledge. When a man wishes to build a fine house he secures an architect, and obtains from him a working model or plan on which he can proceed. There is no difficulty in understanding such a plan, or in making a duplicate of it and sending it to and fro in the country to multiply the number of similar houses; but in the case of any living thing no such plan can be formed and no written description however full and exact can accurately set forth anything that may be safely followed as a plan apart from practical lessons and explanations obtained by handling the fowls themselves. This is in harmony with modern ideas of education. If it is to be good for anything it must be gained in the working laboratory rather than in the study. No doubt every skillful breeder has an ideal toward which he is striving, and by a process of intuition he may be able often to tell at a glance which of his birds most nearly conforms to his ideal; but then his ideal is the outgrowth of a limited knowledge of birds, perhaps of his own birds only. He may never have had an opportunity of carefully handling another breeder's birds, and finding out how they are related to his ideal, or to the other breeder's ideal, and thereby securing fresh data for correcting and improving his own ideal. As a rule at the large shows no knowledge is gained except what may be incidentally gleaned through the wires of a coop. What I would like to see at the next meeting of the American Buff Cochin Club is the largest and best display of Buff Cochins ever seen in this country, and the largest and most influential gathering of breeders ever brought together all intent upon giving and receiving suggestions, and willing to allow any and every fowl in their exhibits to be brought before the meeting for illustration of any excellence or defect that may be under discussion. I would like to see also such expert Cochin judges as Messrs. Butterfield, McGrew, Hewes, Nichols, Berar, Tucker, Rankin, &c., in attendance, not as idle spectators, but as teachers and learners, that they may more correctly voice the sentiments of the meeting in the future placing of their awards. If any of us have any pet notions as to feathering, shape, or color, let us by all means bring them to the test of free and enlightened discussion that their real value may be more correctly estimated. I shall be pleased to hear from many others as to this matter.

J. J. HARE.

Holmhurst Poultry Yards, Whitby, Ont., Can.

POULTRY ADVERTISING.

Continued from September Number.

The returns that should be secured from a given amount of advertising is an important matter, but it is impossible to make an accurate estimate as to the results that should be secured. Too many things must enter into the calculation. The returns are not so large at first as they will be, naturally, after your name and stock are better known. Some papers bring better results than others. A great deal will also depend on what you say in your advertisement, and upon its appearance. Something will depend also upon the variety you offer for sale. One cannot expect to do a large business with a rare variety, unless his specimens are of very unusual excellence, and he has been before the public for a long time. All of these things are of the very essence of advertising, and they will determine largely, the results obtained so that it is utterly impossible to say what returns any definite amount of money expended should bring in actual sales. Remember always that the indirect results may and usually do, largely outweigh those that can be traced directly. Comparatively few will write stating the paper in which your advertisement was seen. It may have been seen in a half a dozen papers by the same person, and this brings up the old question whether it is wise to advertise in papers that cover largely the same field, and go to the same persons.

It is usually the opinion of the professional advertising men that duplicate circulation is an advantage rather than otherwise. The result of seeing your ad in a half dozen papers is much the same as seeing it in the same paper month after month. You have seen "Take Hood's," on barns and fences about every minute for hours at a stretch in riding on some railroads. You cannot forget it. This is the best sort of advertising. I would like to have my ad stare a man in the face in a dozen papers. Royal Baking Powder is advertised on every step at every station on the Elevated Railroads of New York City. This is a Duplicate Circulation with a vengeance. The "Royal" people know a thing or two about advertising.

The expense question is, of course, one that must never be lost sight of. It costs money to advertise, but as a business man, you should spend your money to the best advantage. It is, of course, difficult to give advice to any man as to the amount of money he shall spend, but there are some principles that should not be lost sight of. The primary consideration should be, not the amount spent, but the results secured.

I heard a man say recently regarding a certain advertising project "I don't care what it costs, if you can show me results." Do not imagine for a moment that you are saving money when you get space cheap in a poultry paper. The cheapest advertising is that which gives you the largest results for your money. Advertising rates are usually based on circulation. Two-thirds of a cent a line per thousand circulation is a fair rate in a poultry paper. If you pay ten cents a line, or \$1.40 per inch, for space in a paper that has 5,000 circulation, you are paying more than you do when you pay 20 cents per line, or \$2.80 an inch for space in a paper that has a circulation of 30,000. The first paper has a very high advertising rate, the second is comparatively low.

Advertising is a cheap way of letting the people know what you have to sell. While no proportion can be laid down, let us say that a man spends \$50 a year for advertising, and that as a result, when his reputation is fairly established, he sells eggs and birds to the amount of \$250. This man has been fairly successful, and should make a good profit on his sales. Let us suppose that he increases his advertising expense to \$100 and that his sales are \$500. In this case the proportion is the same, but his profits should be larger, and his advertising should be considered cheaper comparatively. Many of the leading breeders do better than this. One shrewd advertiser spends about \$750 in advertising, and his returns are about \$7,500. He started on a small scale and there is no good reason why others with the same ability who will exhibit and advertise as this man has done should not get the same results. His success is not a matter of luck. Your advertising must have variety. The ad should be changed frequently. An old ad, like old shop worn goods, discourages buying. One gets tired of seeing the same advertisement year after year. It indicates lack of enterprise and the inference is readily made that the advertiser is a "has been." The advertising should be reasonable. Advertise at each particular season what you have to offer at that time, be specific. Be careful, also, to advertise only what you can sell. It will hurt you if you get many orders from your advertisements that you cannot fill.

Another form of advertising is by means of a catalogue or circular. This cannot take the place of advertising in good journals, but often supplements such advertising to good ad-

vantage. The catalogue or circular is the most aristocratic form of advertising. The catalogue whether large or small, must be as attractive in appearance as the printer's art can make it. Its size must depend upon the extent of business you are prepared to do, and should contain good solid information regarding your birds. It will add to its attractiveness if illustrated with good pictures. This catalogue is to be used in answer to inquiries regarding your stock and it is also a good plan, if the quality of your stock warrants it, to send a copy of your catalogue to every breeder of your variety whose name you can secure, but your advertising is not done when you have used the papers and a form of advertising and it is just here that many poultry men fail. Great skill is required in handling your correspondence. It is frequently done very carelessly by those not acquainted with business methods. No rules of course can be laid down that will be applicable to all cases. Each letter requires individual treatment. One must use his best judgment as to the quality of stock the inquirer wishes to purchase. You cannot always know what the correspondent wishes. The man who wishes to pay only a dollar or two, often describes a fifty dollar bird, or quotes the standard description of a perfect bird to you, almost entire. You will of course make mistakes in this matter, but there is no help for it. One will learn from experience how to answer letters appropriately. It is very important that every letter be answered. Postal card inquiries may result in a good sale, and may secure the writer as a good customer, and through him other customers. The present writer sold a \$25 cockerel to a man to whom he had no idea he would make a sale.

Of course every letter should be answered courteously. You must show a personal interest in your customers. Make them your friends. It is the man who sends money to you year after year who will help build up a solid business for you. And this man you must please every time, and you must always be perfectly candid with him. The poultryman usually thinks his work is done when he answers a letter of inquiry that he has received. If the inquirer is not heard from again, the matter is dropped and too often the paper in which he has advertised is blamed for not making sales. But this is very unjust. It is not the paper that should be expected to make the sale. You must make it. The paper should only be expected to introduce you to the prospective customers. No paper can do more than that. One letter in response to an inquiry is not sufficient, if the inquirer is not heard from. It is usually best to write even a third time, each letter should be courteous and yet strong and to the point. There must be no note of complaint. This plan of writing two or three letters is called the "follow up" system of correspondence, and is in almost universal use by business firms. Your advertising and your letters take the place of a salesman, and he would be a poor salesman who should in every case give up at the first attempt.

It will be thought by some that quite an elaborate programme of advertising has been outlined in this article. This may be true. The idea of the writer has been to outline a plan to make the advertising effective and not to give a plan of making it as cheap as possible. It does, of course, cost money to advertise chickens effectively as it does to advertise everything else.

This is a very large subject and has been treated very inadequately in this paper, but the writer is confident that the plan here given if followed persistently will bring success eventually.

St. Paul, Minn.

E. W. RANKIN.

That most anyone can keep a few fowls for pleasure and a possible profit is all true, but there is quite a difference in the keeping of a few fowls and the keeping of a few thousand, and inevitable failure will come to the person who makes the attempt without previous knowledge and practical instruction.

The minister, the lawyer, the doctor, the artist, the scientist, the mechanic, all have to serve years of time in preparation for their chosen vocation and why anyone should think they can succeed in the poultry business without such preparation is a mystery.

There is nothing saved by buying cheap grain, by which we mean screenings or damaged grain. It requires more to produce results and, in fact, cannot produce as good results as good grain, regardless of the quantity fed to the fowls.

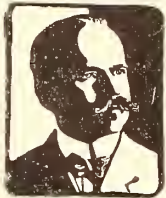

A ridge or knoll where natural drainage can be had is preferable to any other when selecting a site for the poultry house, as dampness and filth are the causes, directly or indirectly, of nearly all poultry diseases.

Notary Public.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Central West Conditions.

The state fairs in the West have brought out a greater array of good birds than ever before. They are being bred and fitted in the sections round about where the fairs are held. From the most remote corners of the state the choicest have been sent to the fairs and they have won, as a rule, in every class entered. Beginning at Sedalia with the Missouri state fair the circuit of this state, Iowa, Nebraska, Kansas and Colorado has been completed and wherever the professional huckster showed against the specialty breeder the latter has worsted the former much to the huckster's sorrow and money loss. A new building at the Missouri fair has been given over to poultry. It is steel framed and of brick. The cooping is excellent and new, and the double-deck- ing is well arranged. More early birds

have been exhibited at the fairs this year than ever before and all fanciers who are making more or less of a business of breeding fowls report excellent prospects for the coming year's business. The wheelhorses of southern Missouri were present at their fair but not enough of the rank and file presented themselves. Nearly 3,000 birds passed before the judge at Sedalia—speaking well for the fancy's condition in Missouri.

At the Iowa state, the fanciers did themselves proud by bringing out the best line of birds ever exhibited. The judge's work was quite hard but accomplished in a reasonable length of time. The hucksters were again worsted and Iowa's breeders, bringing out better fowls yearly, may soon discourage the rounders. Iowa's management should locate the poultry in a permanent building. Many could not find the display without tedious searching. Nebraska fair directors put up a large, new building for the poultry fanciers. They showed their appreciation by more than filling it with grandly fitted young and old birds that brought out many praises. The old poultry building was overflowing with incubators and appliance displays. Besides these many private buildings for poultry appliance concerns were occupied about the main exhibition. Kansas made a better exhibit than previously and the same is reported from Pueblo. All these indications point to a big business for poultry men who try to and do reach the western and central west farmers and poultry growers. The business is sure to gain a strong footing in these sections and it is our aim to place this journal where it will be in touch with those most interested.

The Turning Point.

The coming season will be the turning point in many a fancier's career. It may be in the sales of stock, the winnings at the winter exhibitions or along other lines directly connected with the fancy. When a fancier sells stock he should remember the first need of the buyer. Purchasers always want something better than the birds in their own yards. This is the rule, and the opposite instances only prove it. The breeder who buys good foundation stock, carefully mates it, produces good birds yearly, keeps abreast of the demand and styles, and who proves their worth in competition, knows that buyers want something more up-to-date, rather down-to-the-minute, than their own production. The amateur fancier should ever keep this in mind as he sells the surplus. This is the ideal, most certainly, but who advance more sure than those of ideals? The amateur's or any fancier's reputation is built up or torn down by the birds he sends from his yards. This season may be his first at selling a few birds by mail order and it may prove a turning point for him. Making a creditable exhibition is another pivotal thing. If one is afraid to show his birds to be in hearty competition with men, he had best stay out of the fancy's ranks! Where there is the most competition, the greatest rewards come when arrived at. Do not, never, pray to be a good loser; pray only to win—and work more than pray! Many a small fancier has lost because he made a poor showing. The quality of their birds was excellent but they lost owing to poor fitting. Dirty cooping, unclean birds,—these are the

companions to half-heartedness. Put work and your whole heart into the fancy and receive a just reward! Too many of us in every vocation are only half in earnest and we get back just what we give.

Enter the Illustrated Standard.

The enterprising fancier now has his new Standard of Perfection and is doubtless pleased with the general make up and individual breed or variety description in which he is interested. There is no doubt that this work is ten points ahead of anything ever given to the American fancier by the American Poultry Association. We waited long and patiently—in fact many of us suffered—and now the completed work more than pays for our fears. It is a monument to the work of the late revision committee and the artists—Sewell, Graham, Shilling, Burgess. The glossary of technical terms is so much better in wording and the sketches accompanying are so explicit that there is no comparison between it and anything the past has given us. The illustrations are all that could be desired by breeders and fanciers. It is certain that the new work will be of greater help in mating and breeding, judging and scoring than all previous Standards. The cause and quality of pure-bred fowls should advance faster in the next few years than in the past twenty. Harmony of ideas will also be smoother among breeders. A guide we now have where previously we were groping in semi-darkness. We can afford to be proud of it.

Earlier Shows and More of Them

The large number of fall fairs, both early and late, again brings to our attention the idea of summer shows. Especially is this so when the quantity of birds and their plumage improves as it does annually. Live fanciers are doing all in their power to get the full value out of fair exhibiting and advertising. They understand that it pays in these days of great agricultural prosperity, to reach the farmers who are interested in poultry. The winter shows do not bring out the farmers as they should. We see cockerels and pullets in exhibition coops in August that are up to weight and in elegant plumage. At dozens of fairs we see the old birds in beautiful plumage obtained by early molting. There is no reason why poultry shows should not be held from September to February. The recent trials of hatching August and September chicks for fall fair showing, these trials being conducted in certain fanciers' yards, prove that big "chicks" (those under one year), can be raised by this method. Of course, such chicks could not have been used to breed from till their second spring as their use during the first would ruin plumage for showing in August and September. They could be bred from in September if showed in August—this for chicks that would be used for another year's showing. The time is coming when by September the big displays will be on. Many of us shall live to see it!

White Rhode Island Reds, or Rhode Island Whites, will soon sail into view if we are to believe the rumors lately set afloat. We hope they'll stir up no A. P. A. doin's and that they are as meritorious as the Reds.

Pay and Knowledge.

As a rule poultry judges are paid according to their ability. In this country many demand and easily receive from fifty to seventy-five dollars for their services at one show. When the best judges earn big fees, the guide-boards standing along the paths of the younger generation of poultry judges point to integrity, sincerity and a thorough knowledge of the work, if large remunerations are desired. Some time ago a judges' association was suggested, but, thank gracious, it fell through. The judge who stands alone, and who has the courage of his convictions is the best judge. If he be strong enough to do this, his knowledge of the requirements of any breed under consideration need not be questioned. He is the stamp of man who will keep abreast of the procession! Mr. R. E. Porter, writing in Poultry, says that English judges sometimes take thirty classes and get but two guineas for their work. He advises us that a judges' protective association may be formed to keep up the fees! We would say that one is necessary if but two guineas (about ten dollars), is a judge's fee. We have one judge who will not enter a duster at less than seventy-five dollars—and he's a grand judge, too! Many others who only pass on a few classes during the winter get a hundred dollars for officiating at a show. Our judges are paid according to their skill—this makes the younger ones studious. Good judges will always get good pay for services in America.

Another Successful Woman.

A Mrs. Wilkinson, who is one of the best known English women fanciers, recently made the following sales: Orpingtons, a trio of buffs, \$600; four pullets, \$400; two pullets, \$250; one pullet, \$150; cockerel and pullet, \$250; trio at \$175; two black pullets, \$200; a pen, \$175; a cock, \$50; and a trio of whites at \$250. Plymouth Rocks: a pair of barred, \$250; cockerel, \$150; pullet, \$100; pullet, \$75; pen of buffs, \$125; cockerel, \$50. She has sold several others at smaller prices but they are too numerous to mention. This woman is nearly the Mrs. Basely of her island. She has worked hard and long at the establishment of her farm and name as a fancier and breeder. Her successes are worth noting, hence we chronicle them.

Paying Debts.

Something that struck us very favorably is the interest taken of late in the fraudulent associations which have refused to pay the premium money won by the various exhibitors. When a fancier takes his best birds to a show he should have some assurance that he is going to get the money he wins. There are a few shows which fall far short of this every year and yet they have the bump of colossal nerve that lets them go on holding

shows each year on their promise to pay their premiums in full. There is no getting around the fact that these show associations should be exposed and some of them are by the exhibitors who have shown with them. But exhibitors can do no more than pass among themselves the facts of the case; the public is the proper critic for cases of this kind and sooner or later the rank and file of all poultrydom will demand that fraudulent associations be exposed. When honest shows cannot be held and all of the premium moneys paid in full then it is high time to call the attention of the public to the erring ones. It is not for the best interests of the fancy to shield associations that cannot (?) pay their justly contracted debts. When a case of the moneys received by an association not paying the judge and the premiums too, then the honest association goes down deep in its own pocket and produces the cash that is needed.

Our New Theory.

The theory that grit is eaten by the old hen for the growing of her plumage is getting the full share of knocks that come to new ideas of all kinds. It may be that the poultryman is a very thick headed fellow, though we have never found him so, and cannot swallow the idea. The press of the country is inclined to think that the originator of the theory is just trying to see how credulous the fancier is. We can but add to the multitude of paragraphs on the subject that while some are busy trying to find the truth in the theory the wise fancier is studying the laws of breeding and remembers that the greatest success in raising chickens is in the close application of that somewhat scarce article called common sense.

Chinese Fowl History.

Editor AMERICAN POULTRY JOURNAL:

I have read with much pleasure Mr. Riggs' articles on "The origin and history of the breeds," and can assure you that what he writes about Dr. Brown is true. Dr. Brown was a son of Deacon J. Brown, deacon of the Congregational church at Manson, Mass. His mother was Phoebe Brown, who wrote the popular devotional hymn, "I love to steal a while away from every cumbering care." I was present when Dr. Brown returned to Monson, and I saw and knew of his poultry. China was then not open to the world as far as her ports were concerned, and only by special favor was the permission given to Dr. Brown to bring over to this country the poultry he did. He got the best and largest he could secure. I have seen many a fowl from his coops stand beside a flour barrel and eat with ease from the top. The complete history of the Chinese fowls should be preserved, and as there are many now living who were next door neighbors to Dr. Brown and his son—now a doctor in Monson, further facts could be easily secured.

WM. CAHOONE GREEN.

PROFIT IN EVERY PACKAGE

O. K.

MAKES POULTRY PAY

O. K. Poultry Food is the greatest egg-maker known. It keeps fowls healthy and active, and by invigorating the system puts it in shape for increased egg-production. It is a pure, guaranteed conditioner—in other words it furnishes the elements needed to put the physical and egg-making organism in perfect condition. The digestive organs are assisted, the vitality increased and your hens look better, feel better, grow better, and lay better. Instead of scrawny specimens, which are too weak and worried to lay, or overfed fowls, which are too fat and lazy to do so, you may just as well have a fine flock of feathered beauties piling up profits in the shape of eggs and meat. Why not begin feeding

O. K. POULTRY FOOD

and make your poultry pay? O. K. Poultry Food cures Gapes, Roup, Cholera, Indigestion, Leg Weakness, Diarrhea and all kindred diseases—promotes growth and development in young fowls. We prove our claims by the experience of our customers. Witness the following:

Blue Island, Ill., Jan. 16, 1905.

The O. K. Stock Food Co.,
Monon Bldg., Chicago.

Gentlemen:—I take pleasure in saying that I have used your O. K. Poultry Food for three seasons and after having had experience with several other makes, have decided that your brand is superior to anything else offered in this market, and have for the last two years used it exclusively. I am very well pleased with the results obtained as my fowls are in the "pink" of condition and certainly produce eggs in larger quantity than when I undertook to do without any food of this character.

You are welcome to use my name and endorsement at all times.

Yours very truly,

[Signed] J. CUNNINGHAM.

Breeder of Rhode Island Reds.

IMPROVEMENTS IN ADVERTISING.

Now since the poultry press shows a heavy disposition to sit down on and squeeze the little squealing free reading notices out of existence, we can expect improvements in advertising methods.

If the farm journals would reduce their field notes to an acre or two instead of a quarter section, then advertising would be getting down to a known quantity. The advertiser at a distance would get the same treatment that is accorded the man whom the field man visits. This is my opinion, yet I may be off in it.

Of course the field man says, Shut up, Johnson, this is not your funeral, and he is right, too, but I reserve the same right for myself that these boys assume

for their paper, simply the right to speak up in meetin'.

However, I am not here to scrap. What I want to tell in this article is things that might help advertisers and readers of advertisements alike, admitting my incompetency to advise, no doubt the editor will be lenient towards my opinions.

My opinion is that in these days while the advertising expert is figuring out the public, the public has a lot of pencils at work on said expert. Admitting that advertising is an expert profession, we would make a great mistake if we did not reckon with the other side of the question. As long as the advertisers of gold bricks, wooden nutmegs and blue sky make a living, it is reasonable to assume that some people are still vot-

ing for George Washington and General Jackson, but just the same in these days of telephones, rural mails, daily papers and quick communications, the readers of advertising are students of advertising.

Not referring to the right or wrong of it, the mails and mail order houses are making dull times for the once flourishing local merchant. Whether right or wrong the tendency of the times is to stay at home and buy. Even our agricultural and other schools are teaching it, not directly perhaps, but indirectly through teaching the students how to be independent, how to write business letters and do business through the mails.

Regardless of our sympathy for local dealers we must admit that mail order buying carries a charm, or perhaps expectant excitement would be a better name for it and it gets every one of us to some extent.

Yes, it's true that mail order competition is getting to be a big battle, every line seems to be crowded, but we must take courage through counting the growing, disposition to order by mail. Take the poultry papers for instance; seemingly everybody wants to sell fowls or eggs, overdone apparently, and in some instances those predicting its being overdone are anxiously awaiting the arrival of some nice birds or eggs by express.

We see the breeders, who advertise, arrayed, their numbers look big, but we fail to rightly estimate the buyers; if we did estimate them we would likely put the figures entirely too low.

There is all kinds of room to advertise fine poultry, and while I think of it, let me mention not to snub the breeders' cards if you are hunting fine poultry or eggs. I know whereof I speak. I have tried it, and if I was hunting 10,000 head or fine poultry, or 50,000 eggs the breeders' card chaps and I would get acquainted better than ever.

Good chickens? Yes, sir, their birds are all right, the smallness of their ad being solely their timidity in advertising, little by little they grow confidence and finally become some of the big shippers. I take it that the size of the ad more closely represents the size of the business than anything else, and the ability to fill large orders.

With my faith in advertising after years of experience in advertising, I would say let your light shine if you have the goods. A light under a bushel is too dim to be seen, even though you have only a few head of fine poultry, advertise. No doubt the few head have cost you a good price, then why are not you entitled to a good price?

But I must desist along this line as some might assume that I am going to turn advertising solicitor, such an assumption would be a mistake. I have no advertising space to sell. I simply want to give a tip, or rather to express my faith in advertising.

M. M. JOHNSON.

Clay Center, Neb.

MATING OF WILD GEESE.

Exmoor Farms has a flock of wild geese which never mated. This spring a wild-goose came down from a flock flying overhead and mated with one of our ganders and hatched four young. The old goose became so tame that we were able to clip her wing. We have had wild ducks do this often but never geese. Exmoor Farms, Lebanon, Pa.

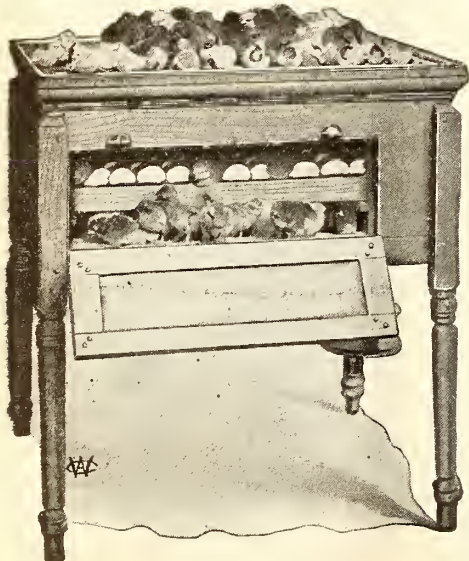

Another New Addition To The Prairie State Line

THE PRAIRIE STATE Jr. A LOW PRICED STATE GOOD INCUBATOR

We have made so many new additions to the Prairie State line recently that we are compelled to announce a new one every month. In the August papers we called attention to our *New Colony House Brooders* which have been wonderfully successful; in September our *New Universal Hover* created a sensation. It has been a "taker" with poultry people everywhere; this month we present for the first time our *pet*, The Prairie State "Junior" Incubator.

For years we have been besieged with requests for a Prairie State Incubator at a low price, but not until this summer have we felt that we had so perfected the "Junior" that we could put it out and stand square back of it in every way. We have now reached that point, and offer the "Junior" as the perfected product of years of experimenting coupled with a ripe knowledge of the requirements of such a machine.

The beginner, who never hatched a brood of chicks with an incubator, will find the "Junior" just the machine to buy. The "old hand," who needs more machines, can do no better for the price anywhere.

If your boy and girl want to raise chickens, encourage them and help them by giving them a "Junior." Don't waste money experimenting with cheap machines that have no reputation back of them. Don't discourage the boys and girls with a machine that will be more bother than it's worth—with results that will disappoint and soon kill their enthusiasm.

The name *Prairie State* stands for the best there is—we've been twenty-five years building up this reputation and we're not going to begin tearing it down now. We honestly believe that the "Junior" will extend our fame still farther—because it meets a need—it makes it possible for thousands of people, with limited means, to enter a pleasant, profitable business, who could not afford it before, and it will help them to make their venture successful.

The "Junior" has many improved features not found in any other low priced incubator. The heat is under automatic control. The moisture is supplied automatically by diffusion. Same amount of air moisture saturation is maintained inside the machine as outside by a diffusion diaphragm. Ventilation may be supplied by diffusion or a direct current of fresh, warm air that is forced through the machine, and is always under control, the flow being constant and not influenced by the action of the regulator. The large, roomy egg chamber gives the "Junior" a greater capacity for the price than any other incubator.

The "Junior" is made in two sizes, No. 1 for 60 eggs, and No. 2 for 100 eggs. We know you will be interested in a full, detailed description of these machines, and suggest that you write for free "Jr." catalog which will convince you that we have accomplished what we have been aiming at, the best low priced hatching machine ever built. Write for catalog today, ask also for New Brooder catalog.

PRAIRIE STATE INCUBATOR CO.
468 Main Street, Homer City, Pa.

WHAT TWO BOYS HAVE ACCOMPLISHED IN THE CHICKEN BUSINESS.

In the summer of 1902 we organized a chicken company, with Torrance Welch, aged 11, president and treasurer, and Brian Welch, aged 9, vice-president and secretary. We started with one old hen, which we bought from Mr. McDonald, and about a dozen hens which we got from Mr. Martin. We got an old dry goods box and bought some wire and made a chicken coop, but the rats got a lot of the little ones, so as winter came on we made a shed, which in January our father replaced with a good structure which had two stories and was divided in the middle and had a place for pigeons, which we have not got yet, but hope to get some day. In July, 1902, we bought some ducks, which got to be quite big, but I regret to say that they got into the fountain and were drowned one cold day. As we have not got the account for 1903 we can not say anything about it. The net profit for 1904 was \$53.43, the largest month being August, as we took in \$7.24. In 1904 we had 4,343 eggs, or 362 dozen eggs in 366 days, with about 35 hens, which we consider quite good. In February, 1905, we set an incubator with 100 eggs and got two chicks, one of which died, but the other one is now laying. We set 15 hens from March 27 to June 21, all of which hatched 128 chicks, which would be an average of 9 chickens to a hen. We also bought 21 chicks for \$2. In 1904 we took the AMERICAN POULTRY JOURNAL for 50 cents a year. In 1905 we continued the subscription. In 1905 for the first six months we cleared \$31.15, March being the largest month, as we cleared \$10.06. For the first six months in 1905 we had 3,889 eggs or 324 dozen eggs in 181 days, with about 50 chickens, April being the largest month, as we got 993 eggs. We would have got to the thousand mark, but we sold 13 hens about the 26th of the month. Our chicken feed cost us an average of \$4 a month. In the winter of 1904-05 we had about 50 chicks, but as we sold some and killed some, we have about 30 now and about 130 little chicks ranging from three weeks to five months. We sell most all of our eggs to our mother, and we keep her supplied the year round, besides supplying a few other customers. We have purchased in the meantime several settings of Rose Comb Brown Leghorn eggs at \$5 per setting; two settings of Rose Comb Black Orpington eggs at \$5 per setting, besides a trio of Rose Comb Black Orpington fowls at \$10; a bone grinder at \$13.50, and about \$12 worth of chicken wire, and all of our chicken feed, so that what we have made is net profit.

BRIAN K. WELCH.

Gowanda, N. Y.

RAISING OF YOUNG CHICKS.

For several seasons past for the first five or six weeks after hatching, we have kept our chicks in the brooder house before letting them outdoors. Especially through the cold days and nights even up to recently, we follow this plan (and some in now); have had no deaths among them. Their growth has been remarkable. To avoid cold and dampness is the great aim. J. W. Eastes, Galesburg, Ill., 565 W. Main street.

White Wyandottes and Pekin Ducks

Greatest competition White Wyandottes and Pekin Ducks, winners in the greatest competition in the world: World's Fair champions; 1, 3, 6 and 7 on young Pekin hens; 2, 3 and 7 young drakes, 3, 5 old drakes and 4 old hens. Won 6th and special on cock in White Wyandottes, and 1 have the best in the world in my breeding pens for 1905. 1st cock, 3d cockerel, 1, 2 and 4 pullets and eight more pullets, sisters to the prize winners and a brother to the 3d prize cockerel.

Illinois State Fair, 1st, 2d and 3d on Pekin Ducks. No White Wyandottes were shown. St. Louis Fanciers Association, Dec., 1903, won 1st breeding pen, 1st pullet and 3d cock in White Wyandottes and special for best pullet. Chicago National Fanciers' and Breeders' Association, 1905, won 1, 4 pullets, 1, 5 hen, 1, 3d chl., 2, 5 cock and three specials for best shape, and silver cup for the whitest bird in the show room on White Wyandottes. Pekin Ducks 1, 2 cock, 1, 2 hen, 1, 2 cockerel, 1, 2 pullet. White Wyandotte eggs \$3 for 15, \$5 for 30. Pekin Duck eggs \$2 for 11, \$3.50 for 22, \$7 for 50.

THEO. AMBROSIOUS

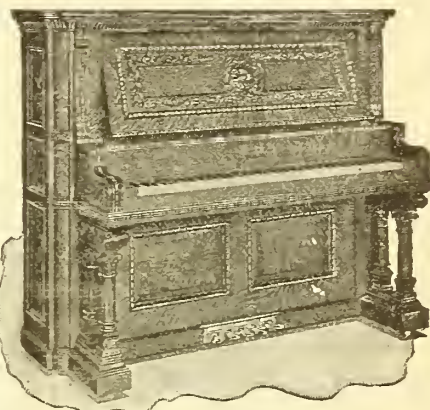

Collinsville, Illinois

WING PIANOS

Are Sold Direct From the Factory, and in No Other Way

You Save from \$75 to \$200

When you buy a Wing Piano, you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many still do—at retail—you pay the retail dealer's store rent and other expenses. You pay his profit and the commission or salary of the agents or salesmen he employs—all these on top of what the dealer himself has to pay to the manufacturer. The retail profit on a piano is from \$75 to \$200. Isn't this worth saving?

SENT ON TRIAL
Anywhere We Pay Freight
No Money in Advance

We will place a Wing Piano in any home in the United States on trial, without asking for any advance payment or deposit. We pay the freight and all other charges in advance. There is nothing to be paid either before the piano is sent or when it is received. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing, and are under no more obligation to keep the piano than if you were examining it at our factory. There can be absolutely no risk or expense to you.

Do not imagine that it is impossible for us to do as we say. Our system is so perfect that we can without any trouble deliver a piano in the smallest town in any part of the United States just as easily as we can in New York City, and with absolutely no trouble or annoyance to you, and without anything being paid in advance or on arrival either for freight or any other expense. We take old pianos and organs in exchange. A guarantee for 12 years against any defect in tone, action, workmanship or material is given with every Wing Piano.

Small, Easy Monthly Payments

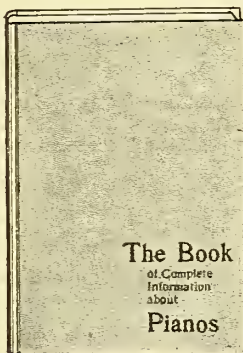

In 37 years over 40,000 Wing Pianos have been manufactured and sold. They are recommended by seven governors of States, by musical colleges and schools, by prominent orchestra leaders, music teachers and musicians. Thousands of these pianos are in your own State, some of them undoubtedly in your very neighborhood. Our catalogue contains names and addresses.

Mandolin, Guitar, Harp, Zither, Banjo—The tones of any or all of these instruments may be reproduced perfectly by any ordinary player on the piano by means of our Instrumental Attachment. This improvement is patented by us and cannot be had in any other piano. WING ORGANS are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

You Need This Book

If You Intend to Buy a Piano—No Matter What Make

A book—not a catalogue—that gives you all the information possessed by experts. It tells about the different materials used in the different parts of a piano; the way the different parts are put together, what causes pianos to get out of order and in fact is a complete encyclopedia. It makes the selection of a piano easy. If read carefully, it will make you a judge of tone, action, workmanship and finish. It tells you how to test a piano and how to tell good from bad. It is absolutely the only book of its kind ever published. It contains 156 large pages and hundreds of illustrations, all devoted to piano construction. Its name is "The Book of Complete Information About Pianos." We send it free to anyone wishing to buy a piano. All you have to do is to send us your name and address.

Phoenix Poultry Plant

I am ready to offer you a bargain in the Phoenix Poultry Plant, our stock, good will and trade. Having sold our milling business here we must make a change. I will consider an exchange for a good mill property.

MRS. J. H. OREBAUGH
 Batavia, Ohio

THE ANCONA FOWL.

Several years ago I ran across an advertisement in one of our leading poultry papers, the attractive headline of which read something like this: "If you want eggs you must have Anconas." Up to that time I knew absolutely nothing concerning this by no means new variety of poultry and I had only observed the name once or twice in Lewis Wright's Poultry Book. Immediately I started an investigation to ascertain what sort of fowls these were that bore the Italian name. I followed up the investigation by purchasing from one of the leading breeders a trio of old birds and two sittings of eggs. From the time I first saw my purchase I was favorably impressed with the breed and that first favorable impression soon ripened into an absolute conviction that in point of egg production I had at last found the "real

of being great layers and very hardy. About 1883 another variety was introduced, this time undoubtedly from Ancona. These birds resembled the Leghorn in type, having yellow legs and beaks—the legs being more or less mottled with black. The plumage also differed completely, being mottled black and white, just like the mottling of the Houdan. It is remarkable thus to have received two different fowls from the same locality, composed of the same colors, but which have amalgamated in a different manner. These latter fowls are now known as Anconas. They surpass Leghorns as winter layers and stand frost and snow well." (Lewis Wright's Poultry Keeper.)

To this day there are two sorts of fowls bearing the name Anconas—the spurious or false and the real Anconas which are last above referred to by Mr. Wright. Frequently breeders have written me in this country telling me that

ROSE COMB WHITE LEGHORN.

Second cockerel, New York, 1904. Owned by Rocky River Poultry Co., Chicago, Ill.

thing." My admiration for the variety has steadily increased.

HISTORICAL.

Mottled Anconas are one of the most popular new "old breeds," being a late resuscitation of the Anconas of a century ago. They are of late very popular in England, and justly so, and the "Ancona Fever" is fast spreading throughout the United States.

Some years ago a controversy appeared in the English poultry press as to whether or not the Ancona was a cross between a black and white Minorca or Minorca and White Leghorn and this suggestion is even made by Lewis Wright, who says:

"ANCONAS.—This name has been given to different fowls of different origin. From about 1860 to 1880 those so known were cuckoo-colored fowls, of the same type as the preceding (Andalusians), and dark legs, their origin being no doubt a cross between black and white. The birds very likely may have come from Ancona, around which all colors and crosses exist amongst fowls of this type; they were rather short legged, and all the specimens we came across had the reputation

they have apparently two strains and when they describe them I know at once that at least one is spurious and should be butchered, and the origin of the other is many times doubtful. The only way to be sure is to buy from a recognized breeder who can and will trace the origin of his birds and advise you exactly as to what you are buying. But I am digressing.

The statement that Anconas are a cross-bred fowl is denied by the best Ancona breeders. They certainly are distinct in shape though they approach the Leghorn and Minorca. Mr. Wright says that the heads are distinctively Leghorn but in my best specimens imported from the president of the British Ancona Club in 1905, and by him imported from Italy, and bred in line—pure—for upwards of twenty years, I find the heads are distinctively not Leghorn—especially in the broad skull and projecting brow. When dubbed I have observed a marked similarity to some fighting games which I have owned.

Let me quote from Mr. G. Bradshaw, Government Expert N. S. W. Australia,

who said in a series of articles published in *The American Fancier* in 1904, among other things:

"However, irrespective of the actual ancestry of the birds seen in England from 1830 to 1870, it is a recorded fact that Capt. Bowle of the S.S. "Bugle," about 1884, brought to England a dozen birds direct from Ancona, and a further importation in 1887. Whether they were bred and kept pure, or the blood got mingled with those in England already bearing that name is not important; suffice to say that through merit alone Anconas have become more plentiful in England from that time to the present day. They were recognized as a pure breed at the Briggs Show in England in 1895, and by the British Dairy Association in 1898. The first year the birds were exhibited there were in competition 24 exhibits, the next year 58, and at the Dairy in 1900 78 exhibits were made, this being the most rapid rise to show-pen popularity ever accorded any breed in England."

DESCRIPTION.

"They are a handsome black and white mottled fowl, approaching the Leghorn in shape, with golden yellow shanks and beaks, large, bright-red single combs, and white ear lobes. They have a wild, peculiar expression, and are as beautiful and interesting as useful. As early as 1852, as appears from a table in the *English Agricultural Gazette*, four birds of this breed produced in twelve months 928 eggs, or 232 for each hen, a record which if correct, puts in the shade any of our present breeds or strains. They have always had the reputation of being wonderful layers of medium sized eggs (larger than the Orpingtons) and weighing more than those of nearly any breed irrespective of size. In the Government Experiment Station in N. S. Wales they have surpassed all other breeds as egg producers. They are short and stout, extremely hardy, of rare beauty and peculiar attractiveness, and are much admired by those "who know," both for utility and exhibition purposes."

The young exhibitor should be careful how he mates his birds if he wants to breed something worth showing. The cock should be darker than the Standard requirements, and the hens a good medium shade of under color and quills and fluff down to the skin should be black and not white, which is so often seen in inferior specimens. The black should be glossed with beetle green and the spots on the shanks distinct. The comb must be of medium size, 5 to 7 serrations, and it is to be hoped Ancona breeders will not adopt and judges will not encourage or permit, the huge beefy comb of the Minorea type which is quite out of keeping with the general character of the Ancona. The face, except the ear lobe itself, must be a sound bright red free from any suspicion of white. Anconas carry their tails rather higher than most birds, but a tail that is held over the back, squirrel fashion, is positively objectionable and should be avoided. The white mottling should be as clear and distinct as possible and free from any slatey tone.

The eggs of mature Anconas of the original imported stamp are as large as those of the Minoreas, averaging two ounces in weight. Frequently seven eggs weigh a pound.

The Ancona chick grows with amazing rapidity, and is very precocious and independent when reared by artificial means. I think that they learn to eat sooner than those of other breeds. They require

plenty of run, and at the age of seven or eight weeks the sexes should be divided.

Whether considered as a utility or an exhibition bird the Ancona with proper attention is one of the most popular and profitable breeds.

In casting about to find the best strains of Anconas I became a member of the British Ancona Club. I had a long correspondence with the officers of this Association, particularly with Mr. J. W. Sykes, the first president of the club, of Bury, Lancashire, England, and Mr. A. Tysilio Johnson, Glanconway, N. Wales. Mr. Sykes is the foremost Ancona breeder of the world, having won more prizes than all other exhibitors together. I presume that Mr. Johnson is second only to Mr. Sykes. They are both judges of great note of this variety, and I take it for granted that from them I have gained more information relative to what the ideal Ancona is than could be elsewhere obtained. Mr. Sykes emphasizes particularly that the under color in this variety of fowls is of the utmost importance, and this under color must be dark, or black, to the skin, and each feather tipped with white. This includes tail and wings. He further states that a greenish sheen, or lustre, is most desirable for breeding and exhibition purposes. The ideal Ancona should be a trifle more blocky than the ideal Leghorn. The white mottling should be true white, not gray.

I can truthfully recommend to the fancier as well as the poultry farmer this variety of fowl. I know a trial will prove them perfectly satisfactory. With me they have filled the egg baskets constantly, under circumstances and conditions when other fowls were unproductive and I predict for them a very brilliant future.

Quite recently, with others, I have organized the American Ancona Club for the purpose of promoting a more general breeding of these fowls in America and to disseminate reliable information concerning the breed. I shall be pleased to mail the standard of perfection upon request.

J. HENRY BENNETT.

Viroqua, Wisconsin.

TRAP NEST PROGRESS.

In 1898 Professor Gowell, of the Maine State Experiment Station, devised a trap nest that has been given considerable publicity and has been in constant use at that station. In view of the fact that a great many people have been led to judge of the practicability of the trap nesting system by the limitations of the equipment at the Maine Station it is interesting to note that Professor Gowell himself frankly states in his latest bulletin (No. 117) that "only investigators and occasional poultrymen" can afford the expense of installing and using them.

For a number of years AMERICAN POULTRY JOURNAL has carried the advertisement of a trap nest that is in all respects adapted to the needs, the limitations and the means of all classes of poultry keepers and is being extensively used by such throughout the country.

PRACTICAL TRAP NESTER.

It seems to me I've discovered something and it's this, that chicks must be kept warmer at night than at day and heat raised or decreased accordingly; that it's the chill that causes looseness and death more often than the feed. H. C. Beebe, Canton, Ill., R. 5.

CARE FOR MOLTING FOWLS.

During molting time the chickens need great care, for it is a very severe strain on them to shed their feathers. It is not a very good plan to rush them through the molting season, because they need a rest just as well as any other thing does. If they are given a rest they will make up for it in the winter. Chickens molt many different ways. Some shed their feathers quickly and some shed them gradually. The ones that molt the soonest are generally the best winter layers.

Shade is the main thing towards molting fowls successfully; when the birds are naked they need a great deal of shade to keep the sun from burning their bodies. They should have fresh water three times a day. It should be put in a clean dish and then be put in the shade. Grit ought to be within their reach all the time, for this is especially the time that they need some sharp substance to grind up their food. Their food should contain a large per cent of nitrogenous matter. A good mash is made of bran, linseed meal, bone-meal and beef scraps, using twice as much bran as linseed meal. Wet this to a crumbly mass with skim milk. This will make a good mash which your fowls will enjoy very much. The birds should be free from lice before they start to molt, because they cannot molt successfully with the lice bothering them. The best way to get rid of the lice is to take a handful of lice powder and dust it thoroughly through the birds' feathers. A good pigment to produce gloss and rich, deep coloring in the feathers is to put a teaspoonful of carbonate of iron into a mash for a dozen fowls. Another very

important thing is to keep the roosters separated from the hens, because the roosters need a rest.

When the birds are on free range they will provide for themselves all necessary material with which to make new feathers, but when they are confined, all this material must be supplied by the owner. They ought to have an abundance of green food and a meat ration. Their food should be put in leaves, so as to compel them to exercise.

The houses ought to be very comfortable, for the fowls need comfortable quarters on these hot days. The windows ought to be taken off and wire netting put in their place. This will allow free circulation of air in the house. Their quarters should be kept very clean, for filthy quarters are the places where the diseases start. When the heavy rains occur they ought to have access to shelter. When the birds get good wholesome food, fresh water, an abundance of shade, plenty green food and good care they will go through the molting season with the greatest of success.

CHAS. H. WAGENER.

Fullersburg, Ill.

POULTRY RUNS.

Are yours clean? This is one of the things an amateur has got to contend with. I find a very satisfactory way is to buy lime, slacked or unslacked, and sprinkle the ground well with it. Taking part of the run at a time and then spading it under. The next time start where you left off and continue until you have covered the entire run. I do this three

or four times a week; when the run is finished I start over the same way; this keeps the ground nice and clean and gives the birds new ground to work in.

Lime costs 50 cents a bushel, and that will last for some time, so there is very little expense.

EDWIN W. STABLER.

Cleveland, Ohio.

LOUSE AND MITE EXTERMINATOR.

Mr. Bert Undercoffer, Williams Grove, Pa., writes that he has been very successful in getting rid of lice and mites in his poultry house by the use of the following mixture: Five cents' worth of camphor gum, one pint of ammonia and two ounces of carbolic acid; mixed together in about one quart of water. When going to use this he adds to this amount two gallons of warm water. With this he thoroughly sprays the inside of his houses and pens.

This can be prepared at a very small cost and if it will do the work as thoroughly as Mr. Undercoffer claims, it will be a great help to the poultrymen.

CARE OF MOULTING FOWLS.

Don't feed too heavy on fattening grains, as usual a variety with abundant shade, good bath of road dust or a mixture of road dust and wood ashes. Mash and fresh ground beef at least twice weekly and plenty fresh clean water before all fowls at all times, sunflower seed occasionally, and don't ever lack grit and cleanliness. Wilber Bros., Petros, Tenn.

Cyphers Poultry Supplies and Foods.

Our 1905 Catalogue consists of 228 pages. It contains six special chapters on profitable poultry keeping; more than 450 illustrations including latest portraits of 150 best known authors, judges, fanciers, editors, professors of poultry husbandry and owners and managers of the world's largest, successful poultry plants. Will be sent free, postpaid, to every reader who sends his name and the names and addresses of two acquaintances who keep poultry.

In addition to our splendid line of **INCUBATORS AND BROODERS** remember we are manufacturers of

CYPHERS FORCING FOOD

Puts on size, flesh and weight, and produces plumage with a gloss quicker than any other poultry food on the market. It contains a large proportion of protein—the most costly nutrient to be found in grains—and is just what has long been needed by fanciers who wish to hasten the growth of plumage and to secure size on their young stock for the fall shows. It forces the growth and fits young stock for the market.

We grind, mix, sack and seal all our Foods. For the protection of our customers our ready-mixed Poultry Foods are put up in sealed bags, bearing our Trade Mark. Customers should refuse all bags which do not bear our seal, also those on which the seal has been broken or removed.

Cyphers Roup Cure For Colds

is the best possible cure for roup in all stages and forms. It prevents and cures common colds, and for the removal of canker is without an equal. Dissolve it in the drinking water. The birds take their own medicine. One small package makes 25 gallons of medicine. (ADDRESS NEAREST OFFICE)

A Rhode Island Red Vacation Trip.

One of the important questions which we all have to decide each year, is how shall I spend my vacation to best advantage, and as my choice this year resulted so very satisfactorily, I thought it might be interesting to other breeders that are unable to take advantage of such a trip.

Having ten days, our usual allowance for vacation from the bank, I decided I would take my bicycle along, to use where circumstances would make it convenient, and take a trip through the Eastern States and see the flocks of the prominent breeders, that I had read about. By the aid of maps and advertisements of parties I wished to see, I laid out a route and started in at White

a branch of their large ranch in England, D. W. Youngs the veteran White Leghorn breeder where I saw many prize winners and the specimens that Sewall used as models in making the Standard cuts from; Henry Hales, the Dorking Champion, while Wadsworth Bros. and F. D. Baerman of American Red fame showed some very fine quality Reds.

I enjoyed an early morning call on Secretary Baerman and one could not doubt for a minute his sincere, conscientious efforts in behalf of his favorite breed, and he will leave nothing undone to help them hold the position in the Standard as admitted in Milwaukee.

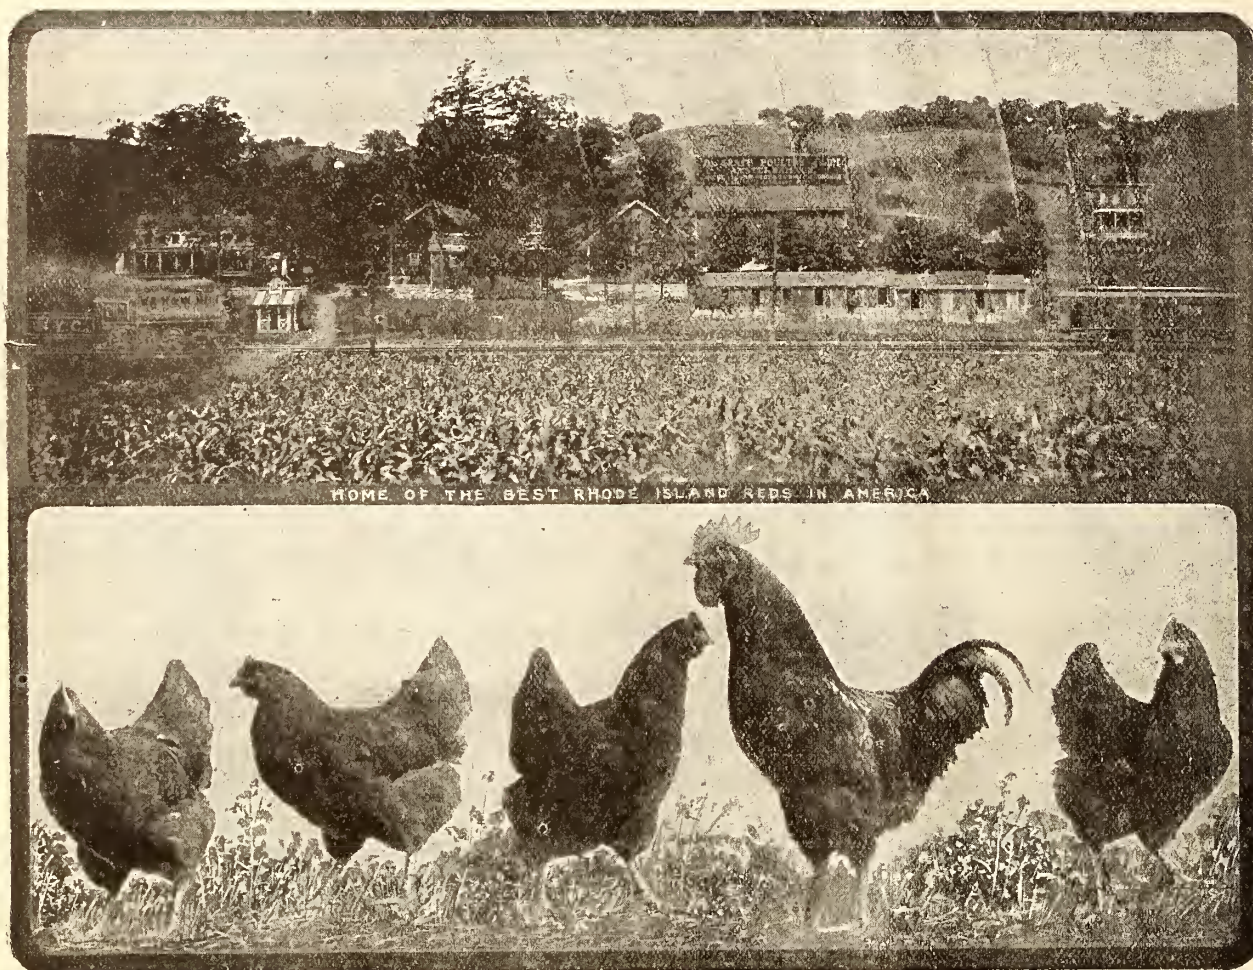

But judging from the talk among

The Willow Brook Farm showed up a fine lot of early hatched Orpington well cared for that made a very pretty sight.

The Elm Poultry Yards was next inspected and later on interesting instructing poultry chat with Proprietor Groesbeck, who is certainly a busy man, between the farm and his store in the city.

Of all the breeders of fowls on a large scale that I have ever seen I take off my hat to G. G. Tillinghast of Vernon, Conn., as his methods of caring for, and results obtained, together with a general health of his large flock of about 5,000 head, has everything beat that I have ever seen.

Nearly all the fowls are S. C. White Leghorns, housed in simple, single thick-ness, colony houses without any paper at all, in flocks of about 50 fowls each.

RHODE ISLAND REDS ON THE DE GRAFF POULTRY FARM, AMSTERDAM, N. Y.

Plains, N. Y., where I visited the Gedney Farm, F. W. Gaylor, poultry manager, and the Ophir farm of Whitelaw Reid, both of which are fine examples of farms developed regardless of expense by millionaire owners, under good management. Among the important places I visited in New Jersey might be mentioned the Davenport Farm, where specimens of many nearly extinct varieties of beasts and fowls are collected from all parts of the earth, including thoroughbred Arabian horses, large flocks of Angora goats, nearly all varieties of pheasants and peacocks, together with imported fowls including the original jungle fowl. The famous Wm. Cook & Sons plant, where all varieties of Orpingtons are bred as

Eastern breeders, they are unanimously in favor of the name R. C. Rhode Island Reds, in preference to American Reds, but this question will undoubtedly be adjusted to the satisfaction of all at Cincinnati, O., and then the breeders will have an ideal established, and they can develop this breed to the prominent position that it deserves.

The night boat to Hartford, Conn., landed me there early in the morning and I soon located Wm. E. Treat, who does very artistic advertising work in the poultry line and we together visited the yards of Robert E. Tuttle, where we found him at work building a new house for his young Reds, but he managed to find time to show up his prize winners.

on a fruit covered ranch. He feeds once a week by filling hoppers with wheat screenings and he never waters them as they have running water in the creek during the season and do very well on snow in the winter when they get accustomed to it.

About 100 pounds of meat scraps is fed at night, when the eggs are hunted with a horse and wagon. Ground bones is before them all the time. Although it was during moulting season when I hunted eggs with him, still we brought back a wagon load of over 1,000 eggs and my very careful inspection did not discover a single fowl that was not in perfect health. But what he does give his fowls that few others do, is plenty of

Prevents Disease

Chemically pure, keeps poultry strong, healthy and in good laying condition. Corrects wrong feeding. Not a drug, but Nature's own purifier. Coarse or fine granulated, also pulverized for soft feed. 50-lb. trial bag \$1.00; special price for quantities. Samples free. Viger's Coal & Wood Co., 434 20th St., Detroit, Mich.

EGG MAKING MACHINE

The improved Standard Bone Cutter is a veritable "Egg Making Machine." It helps the poultryman double his egg supply. Cut green bone contains all the elements necessary to make eggs—lots of them. The

Standard Bone Cutter

takes the green bone and prepares it in its best form for feeding—does it automatically. Simply put the bone in feeder, turn the balance wheel, the cutter does the rest, and gives you a feed rich in albumen, phosphate of lime, and phosphoric acid—the chief ingredients of eggs. It will make and save you money every day, and keep your poultry healthy. Write today for free catalog, prices and our original Trial Plan.

Standard Bone Cutter Co., Box 605, Milford, Mass.

fresh air the year round, and nature does the rest. No frozen combs were noticeable on the hens that were even three years old, and he claims they are allowed to go out doors nearly every day the year round.

At Suffield, I was unfortunate enough to find M. F. Delano away perfecting arrangements for the management of the W. Barry Ownes Poultry Farm at Martha's Vineyard, which he will develop into the largest poultry farm in the world. At Springfield I saw W. R. Graves and was sorry to know that he would not have the management of the next Springfield show, as his management has always been very satisfactory to all.

At South Framingham I found A. G. Dustan busy building more poultry houses; still he was not too busy to show up his stock.

At Waltham S. J. Fogg has a flock of White Leghorns that have always given the boys a hot reception at the Boston Show, while the large plant of W. Ellery Bright under good management showed up some very fine stock, well cared for.

I had a very instructive talk with Judge I. K. Felch, grandfather of the thoroughbred poultry business in this country, and gained many practical pointers from his long experience as a line breeder. I was most fortunate in finding Dr. Louis Deckman of Needham at home, as I consider him the highest authority on the cause and cure of all poultry diseases, as he has spent a life time in investigating and experimenting in the old country and is still experimenting here. The doctor was very hospitable and willingly answered my many questions about what we all are trying to learn more about. Long may the doctor live to continue his study for the benefit of the poultry fraternity at large.

From this on I was right in the heart of the Rhode Island Red country and my list includes the following well known breeders, President C. M. Bryant, Lester Tompkins, Tom Hollis, Phil R. Parks, I. W. Bean, W. H. Harris, Stafford Bros., Frank D. Read, Danl. P. Shove, John Crowthers, F. C. W. Almy and the wholesale breeders of Little Compton.

While I was well pleased with what I saw at each place still it would not be doing justice to the readers if I did not mention the extra large flocks of Pres. C. M. Bryant, Lester Tompkins, and F. C. W. Almy, all of which have considerable over 1,000 each, and as a flock they will compare with any similar flock of any other breeds in general quality.

Although I heard good reports of Judge Dr. Aldrich from every breeder still I found the doctor more than equal to his reputation and have the greatest confidence in the doctor's judgment on Rhode Island Reds, as a more enthusiastic, better posted judge could not be imagined.

It was very enjoyable to me to meet these people that I have read about for years and to look over their fowls and houses and have them show up with pride their prize winning specimens and see the genuine loyalty to their favorite breed which everyone predicted would soon establish itself, on its merits as the leading utility fowl on earth.

I found the breeders as fine a class of gentlemen as you would ever care to meet, and with the breed in the hands of such men it can not help but occupy the prominent place in the poultry fancy which it so richly deserves.

While they did not get any ribbons at the great World's Fair, they were among the best of hundreds that went home without prizes. If you want good birds to start you right at reasonable price, I can supply you in young and old in lots to suit.

G. H. SUNDERMAN,

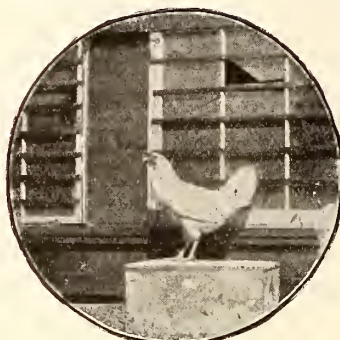

Beardstown, Ill.

county in which little Compton is situated, still I hardly realized what a poultry center it was until I spent nearly a whole day riding through it and visiting the most important farms.

Poultry raising for market and eggs is the main crop of all the farmers, and they raise from 500 to 5,000 each, and strange to say I did not see a single fowl that was not a Rhode Island Red or a half cross with a Red and these were few.

These farmers have been raising these fowls for years and it struck me very forcibly that they should confine themselves to this breed so exclusively when there are over one hundred other breeds in the list.

They raise entirely for the practical end of the business and use large range covered with cheap colony houses and the fowls are allowed to run out, every day in the year, which probably accounts for the hardness of this breed. Their methods of feeding are simple as possible, to reduce cost of labor, and young stock is sold for broilers and roasters, which this breed is especially adapted for. Collectors from the large cities buy the eggs

Second prize R. C. White Leghorn pullet, New York, 1902. Owned by Rocky River Poultry Co., Chicago, Ill.

right at the door at advanced prices, as the demand in all the eastern cities are large, dark shelled eggs.

When I returned home and carefully scrutinized my own flock with the eye of an expert trained by a practical experience which I doubt has ever been equaled, as in the ten days I had literally seen thousands of good Reds and compared ideas with the best posted breeders on the subject, I found I knew much more about what goes towards making a perfect Rhode Island Red than ever before, and I appreciated the general quality of my flock more than I ever did before.

Strange to say I found two orders waiting my return, one being for a breeding pen from California and a cockerel from Australia, so that although little Rhode Island is the hotbed of Reds in this country still they are fast transplanted to all sections of the world.

One of my objects in taking this trip was to convince myself of the advisability of colonizing an orchard of 700 apple trees just full grown with Reds, and my experience has proven to me beyond a doubt that if properly managed it will be a grand success, both for the fowl and the trees.

SEABOARD AIR LINE RAILWAY

INDIANA STATE FAIR.

The Indiana Fair, which recently closed, was a great success in every particular. In the first place the weather man was in good humor, and the week was fine, which called out a large attendance with many exhibits. Every department was full to running over, necessitating the renting of tents and temporary stalls to accommodate the stock; the Poultry Hall was also full. Superintendent Sid Conger did his work well, as he knows how it should be done.

The classes were well filled of most all of the odd varieties, while the more common varieties were very large classes; about two thousand birds were on exhibition. There were some very fine specimens shown in Rocks, Wyandottes, Cochins, Houdans, Leghorns and Orpingtons and other varieties well represented. Chas. McClave of New London, Ohio, exhibited a fine string of birds and got his hat full of ribbons, and a large share of the money prizes. His Rocks, Wyandottes and Orpingtons were exceptionally fine. C. S. Byers of Hazelrigg, Ind., also had some very fine Orpingtons and got in the money.

A number of incubators were on exhibition in full operation, and the hatching of the chicks on the ground made it very interesting to the public and drew great crowds to the hall.

S. B. JOHNSTON.

Norway, Mich., Sept. 16, 1905.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: I do not know much about chickens, but the impression I have formed from all I have heard, and from reading the POULTRY JOURNAL for the past seven months, is that hens do not lay while moulting. Now my experience began on the 18th day of March, 1905, when I bought for my family use, one cockerel and ten pullets (B. P. Rocks), all of which were hatched on the 20th of May the year before; the pullets were laying when I brought them home, and with the exception of hatching time, and intervals of a few days now and then, they have been laying well ever since. They all set, and those I took the chickens away from when hatched, commenced to lay in 12 to 16 days after

hatching, and the ones I kept for brooders commenced to lay when their chicks were from 4 to 5 weeks old.

These hens began to moult about the middle of July, and all through August they were moulting so fast that each one looked like a bunch of rags, still I got 15 dozens and 5 eggs from these 10 hens in August.

Now I desire to ask through your Question Column, Is this regular? or, am I forcing these hens too much by the way I feed? I keep these birds in a pen 16 x 50, with a house 10 x 11 inside; I feed a mash every morning consisting of one quart ground corn and oats mixed with one quart of alfalfa meal, and two handfuls of dry bone meal and a little salt thrown in, to which is added twice a week a teaspoonful of Bigler's Poultry Compound; Sunday morning I give them instead, a mash of equal parts bran and corn meal; for dinner every day I feed one quart oats, and the potato parings boiled, and a few scraps from the table; for supper I feed wheat once a week, corn once a week (one quart of each to a feed), baked potatoes twice a week and one quart of oats three times a week; added to this I give them all the green grass from the lawn they want every day, and they have fresh water and oyster shells before them all the time.

Is it necessary to feed beef scraps to laying hens when they get dry bone meal every day?

When hens have oyster shells before them all the time, is it necessary to give them other grit? J. T. L.

Answer: As you are getting good results from your method of care and feed we would not advise the least change in same. All that fowls require is the proper egg-forming ration and they will lay the year round.

The moulting season being very hard on the bird, much assistance should be given them. Separate male from females allowing both good, clean grass runs with as much shade as possible, with as usual plenty of sharp grit and fresh water. Cut out the corn, feeding lighter grain, allowing more sunflower seed, increasing beef scraps. Wilber Bros., Petros, Tenn.

Your Life Current.

The power that gives you life and motion is the nerve force, or nerve fluid, located in the nerve cells of the brain, and sent out through the nerves to the various organs.

If you are tired, nervous, irritable, cannot sleep; have headache, feel stuffy, dull and melancholy, or have neuralgia, rheumatism, backache, periodical pains, indigestion, dyspepsia, stomach trouble, or the kidneys and liver are inactive, your life-current is weak.

Power-producing fuel is needed; something to increase nerve energy—strengthen the nerves.

Dr. Miles' Restorative Nervine is the fuel you need. It feeds the nerves, produces nerve force, and restores vitality.

"When I began taking Dr. Miles' Restorative Nervine and Anti-Pain Pills I was confined to my bed. I had severe nervous spells, the result of two years illness with malaria. I gradually grew so weak that I was unable to sit up. The spells would commence with cold chills, and I would become weak and almost helpless. My circulation was poor. I had doctored right along but grew weaker and weaker. The Nervine seemed to strengthen me right away and my circulation was better. I have taken in all seven bottles of the Nervine, and I am entirely well."

ROSA E. WEAVER, Stuarts, Ia.

Dr. Miles' Nervine is sold by your druggist, who will guarantee that the first bottle will benefit. If it fails, he will refund your money.

Miles Medical Co., Elkhart, Ind

200 EGG HENS.

Wouldn't a pen of that kind make you money this winter?

The Walter Hogan System

will enable you to select that kind from the hens and pullets which you now have, or from the hens and pullets you buy. Will enable you also to select the cocks which will breed that kind of hens and pullets. While extraordinary, the "System" is after all just plain common sense. You can learn how in just a little while. The first cost is very small—the results are only limited by the number or fowls you keep. You take no risk for if the "Hogan System" is not entirely satisfactory we refund all the money—we hold nothing back. Think it over and then write us for full particulars and price. Mailed free.

THE WALTER HOGAN COMPANY,
17 Nat'l Bank Bldg., Fergus Falls Minn

LEADING POULTRYMEN
use Page Poultry Fence. Why? Because it is built for service. Fences poultry in, stock out. Properly erected, it outlasts the posts. Does not sag nor sag. Requires no boards, few posts. Fits any surface and doesn't obstruct the view. Ask us about it.

Page Woven Wire Fence Co., Box 5870, Adrian, Mich.

THE CHICAGO SHOW.

The Tenth Annual Show of the National Fanciers' and Breeders' Association will be held in the Chicago Coliseum, January 22 to 27 inclusive, 1906. Mr. E. B. Eddy is President; Mr. E. J. W. Dietz, Vice-President; Mr. Geo. G. Bates, Treasurer, and Fred L. Kimmey, Secretary.

The active work of the enterprise has been delegated to committees, as follows: Mr. Dietz, Mr. Kline and Mr. Hill, finance; Mr. White, Mr. Bates, Mr. Muir and Mr. Wagner, judges and specialty clubs; Mr. Muir, Mr. Draper and Mr. Wickey, premiums; Mr. Morse, Mr. Eddy and Mr. Kline, advertising; Mr. Kimmey, Mr. White and Mr. Eddy, concessions, and Mr. Wickey, Mr. Dietz, Mr. Muir and Mr. Wagner, protests.

All communications regarding matters pertaining to the show should be addressed to the secretary.

FRED L. KIMMEY,

Secretary,

Room 500, 325 Dearborn St., Chicago, Ill.

OPEN FRONT HOUSES FOR HEALTH.

It is our experience that poultry will do best in houses having a roosting room, with scratching sheds in front. Our medicine consists of plenty of fresh air, clean water and charcoal at all times combined with clean quarters. It is a mistake to think that Leghorns will not stand above treatment if fed food producing warmth. Our youngsters after they leave the brooders are at once put in open-front colony houses and we can heartily recommend same. White Star Poultry Farm, So. Amboy, N. J.

USEFUL HINTS.

I find that a small amount of black pepper added to every other feed given young chicks, the first week, will prevent bowel trouble.

Salt the mash, as for human food, and you will find it has a wonderful whitening effect on all white plumage fowls. Feed white corn, wheat, oat-meal and barley for "snow-drift" plumage. Mrs. T. F. Leonard, Mt. Sterling, Ohio.

NEW ROUTE TO LOS ANGELES.

Daily Tourist Cars via the Salt Lake Route. Through tourist sleeper to Los Angeles leaves Union Passenger Station, Chicago, 5:15 p. m. every day. Route—Chicago, Milwaukee & St. Paul railway, Union Pacific and the new San Pedro, Los Angeles & Salt Lake railroad. Rate for double berth, Chicago to Los Angeles, \$7.

F. A. MILLER,

General Passenger Agent, Chicago.

BARBED WIRE FENCES.

The man who uses ordinary soap for shaving will soon find out how a horse feels when he gets mixed up with a barbed wire fence. You can buy a new horse but you cannot buy a new face, no matter how irritated or blotchy it gets or how badly it itches. Avoid laundry or toilet soap for shaving as you would a barbed wire fence. Williams' Shaving Soap is made especially for shaving and in another column of this paper is an offer of a free trial sample. "For the sake of your face, try it."

Wilber Bros., of Petros, Tenn., the Single Comb White Leghorn breeders, write very enthusiastically of their new birds, which they believe the grandest flock of youngsters they have ever raised, and are suitable for breeding and exhibition purposes.

Union Lock Poultry Fencing

PICKETS LOCKED IN CABLES

Can't slip, but stretches perfectly to fit uneven ground. Fine meshes at bottom for little chicks. High as you want, 1 to 7 ft. A poultry fence for all fowls that does not sag.

We sell direct to Farmers and Poultrymen. Prompt Shipments at Factory Prices. Mills in Connecticut, Illinois, California. Write for catalogue.

CASE BROS., 28 Main St., Colchester, Conn.

HOW TO KILL

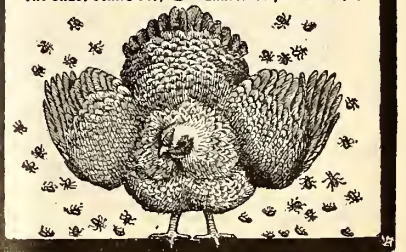

ALL THE LICE

As lice breathe through their sides the quickest way to exterminate them is by suffocation. Fumigating or dipping fowls is dangerous to sight and breathing and ruinous to health. Dusting with a

LIGHTNING LICE KILLING MACHINE

Is the only safe method. Cannot harm eyes, lungs, feathers; delicate chicks or broody hens—they like it better than a dust bath. Cleans 100 to 150 fowls or 300 chicks in an hour. Kills all the lice whether they hide under the feathers of the neck, hackle, wings or vent. No greasing—clean and easy to handle. Send for free catalog and book of poultry facts.

The Chas. Schild Co., 2 Frankfort St., Cleveland, O.

A CORRECTION.

In our list of specialty clubs, published last month, we, through error, located the secretary of the American Buff Plymouth Rock Club at Buffalo, N. Y. This should have read "W. C. Denny, Sec., Rochester, N. Y."

H. P. Rankin of Hartington, Neb., is receiving some very fine complimentary letters regarding stock that he has shipped. Many of these letters speak very highly also of Mr. Rankin's splendid catalogue that he is sending out. C. E. Smith of Hiawatha, Kan., wrote him that the White Plymouth Rock cockerel bought of him is the best he ever owned. Mrs. A. McAllister of Holton, Kan., was very much pleased with the stock she received, and is recommending Mr. Rankin to her neighbors. D. T. Heimlick of Jacksonville, Ill., wrote a letter especially praising Mr. Rankin's catalogue, and a very complimentary letter was also received from D. D. Hall of Omaha, Neb., praising him. W. M. Brown of Forrest City, Ark., was very enthusiastic over a pair of Buff Rocks received from Mr. Rankin.

Separate the weaker chicks from the flock and give them a little extra attention and note the difference in their appearance.

A NEW POULTRY BOOK.

Especially Written and Designed for the Beginners—Sent on Approval.

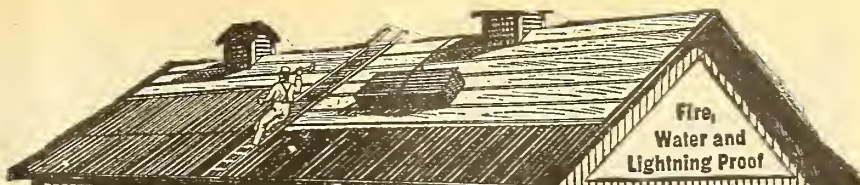

The book treats at length on the great profits in poultry culture, citing many cases where splendid incomes have been made from this fascinating business. It is a well established fact that there is big money in poultry culture. There are thousands of men and women who are earning princely incomes from it, while there are many more thousands who are making a snug little income every year conducting it as a side issue. To make from \$100 to \$1,000 clear profit every year, just in the spare moments, is no small matter with most people. And yet there are thousands who are doing this very thing raising poultry, and this same thing can easily be accomplished by anybody who will conduct it in an intelligent manner. It is just for this latter class that this book has been designed and by following its simple instructions success will be sure and the profits large.

SENT ON APPROVAL.

We want every beginner to read his book and we are willing to send it free on ten days' approval to every man, woman or boy interested who will take the trouble to write to us for it. In order to assist our readers to get this book on approval we print the following coupon, and advise our novice friends to fill it out, cut off, and send it today: Congress Park Poultry Yards, Congress Park, Ill.

Enclosed find 4c in stamps for which please send me on approval, your new book, "Successful Poultry Culture for Pleasure and Profit." If I want the book I agree to send you 50c for it. If I don't want it, I agree to return it to you within 10 days.

Standard Bred Plymouth Rocks

STOCK FOR SALE

West Michigan Poultry Farm
Bloomingdale, Mich.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—As I am a reader of your very interesting paper, I take the liberty of asking the following questions:

1. What kind of grass is best for small yards intended for penning fowls in for breeding purposes? How is rye?
2. How many barred Plymouth Rock pullets or hens in a pen with a cock for best results?
3. Does line breeding lower the egg production, and is there a book written about line breeding?
4. How is corn, oats and wheat equal parts for this spring chickens when fed ground and dry?
5. Will a house 6x12 feet and 7 feet in front and 5 at the rear room 25 pullets this winter.

J. A. H.
Cedar Falls, Iowa.

Answer:—1. Rye or alfalfa. 2. Ten. 3. The advocates of line breeding claim that it increases egg production. There is no book that we know of on this subject. See article on line-breeding in this issue. 4. This is a good feed at all times. 5. Yes, if properly cleaned and ventilated.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Would you kindly answer the following questions in your question column:

First. What is a good home cure for diarrhoea in little chicks.

Second. I had a hen that to all appearances was quite well on Tuesday morning; Tuesday evening I found her dead on the nest. I cut her open and found an egg which should have been laid that day.

F. M. C.
Cleveland, Ohio.

Answer:—First—Boiled milk and cooked rice, seasoned with cinnamon, are the cheapest and most effective remedies for bowel trouble in chicks. Second—Apoplexy, for which there is no cure.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please tell me in the question department of the next issue of your paper if there is a book published on the Orpingtons, and if so, where can I obtain a copy?

Petersburg, Mich. MRS. G. A. S.

Answer:—Not that we know of.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—I have a small flock of thoroughbred S. L. Wyandottes, having range of farm. They are never yarded. My three cocks are selected ones from eggs purchased last year in order to introduce fresh blood into the flock. Will it be wise to keep these with this season's pullets for next year. Under these conditions would line breeding be a correct term?

If it should be needful to increase the number of cocks, would it not be too much of inbreeding to keep this season cockerel selected from my flock?

Will cockerels that are "cousins" to my pullets be entirely safe to use? I wish to keep the flock both pure and vigorous.

J. G.

Answer:—Under the conditions you mention it will be all right to use your

male birds for another season. This is line-breeding as practiced by a large number of fanciers at present. A cockerel mated to his cousins will be all right.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer these questions in "Question and Answer" Department of August JOURNAL.

1. What are line-bred fowls?
2. Is it necessary to change cock every year?
3. If full blood pullets are mated with their father, also a full blood, are the chickens hatched full blood.

Boone, Iowa.

R. W. D.

Answer:—1. It would take too much space in this department to fully answer this question. Read article on line-breeding in this issue. 2. No. 3. Yes.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—I have just read your article in the September issue of the AMERICAN POULTRY JOURNAL, in regard to limberneck. Mrs. I. P., of Washington C. H., Ohio, describes very accurately the symptoms of this dreaded and yet easily avoided disease. In your reply to her question you state that there is no known remedy for this trouble. Now I beg to differ with you in this regard as I have had quite a few cases of limberneck in my flocks and as yet have never lost a bird. As soon as I notice that one of my fowls has limberneck I fill his crop with warm water and as there is usually something in the crop I knead the crop until the food is softened. I then hold the bird head down and allow the water and the food in his crop to run out of his mouth. I next give the bird a teaspoonful of whisky and put him in a quiet corner and in a day or two he will have completely recovered. However, I have noticed that a bird is never as good after he has had limberneck as before. Every one of my birds that has suffered from this disease remains stunted and is always one of the weaklings of the flock. I write this thinking that it may be of some interest to you or your readers.

Excelsior Wire & Poultry Supply Co., Dept. O, W. V. Russ, Prop., 26 & 28 Vesey St., N. Y. City

THE OPEN HOPPER BONE CUTTER.

The staple article of feed for laying hens is green bone. Of other foods there is a great variety in use. Some feed the products of the farm in their unprepared state only. Some rely largely on specially prepared or patent poultry foods. But everybody wants to use green bone. It is beyond question that bone contains in right proportion more of the egg-making materials than any other single substance that can be fed. And in the winter time, and always when hens are confined, these materials must be supplied or it will quickly tell in the egg yield.

This puts to most excellent use the bones which, on the farm and in local markets, would otherwise be thrown to the dogs and afterwards gathered and burned. It has also been the means of perfecting in recent years several makes of bone cutters, one of the best of which is the open hopper cutter manufactured by Humphrey at Joliet, Ill. It is either used as a bone or vegetable cutter. Some of its good points are: There are no partitions in it. It has no springs, split nuts or other complicated parts. There is nothing about it that can break or get out of order. It differs from most bone cutters in that it is exceedingly easy running. Most bone cutters are hard turning, as many users will testify. The Humphrey open hopper has the reputation of being the easiest running cutter made. For this reason it is not necessary to cut or break the bones into small pieces with an ax, as is the case with some bone cutters. One hand is sufficient to operate it. The feed may be regulated to cut as fast or as slow as desired. The bone cutter is one of two machines which Humphrey manufactures for poultry raisers' use. The other is his rapid clover cutter, which is hardly less popular. Both are sold on a very liberal free trial offer to those who are not acquainted with the merits of the Humphrey machines. The Humphrey catalogue, which contains much information for poultrymen, will come free and promptly if you write him at the address given in his advertisement in this paper.

F. A. MILLER,
General Passenger Agent, Chicago.

Mr. C. H. Snyder, Webster, Pa., is desirous of securing a pair of good bloodhound pups. Can any of our readers tell him where he can procure same?

The West Michigan Poultry Farm of Bangor, Mich., simply swept the deck at the Grand Rapids Fair. They had five White Wyandottes entered and took two firsts and two seconds, and on White Rocks with five birds they took also two firsts and two seconds. They have been a number of years breeding thoroughbred poultry and last fall made their first showing at Chicago, taking a winning in White Wyandottes on three birds entered. Their plant is near Bangor, Mich., but a rural delivery reaches them from Bloomington, and this accounts for either place being their address.

First prize R. C. White Leghorn cockerel, New York, 1901. Owned by Rocky River Poultry Co., Chicago, Ill.

Remember that the poultry of the country is one of the very largest and most valuable crops—something to be proud of.

It is rumored that the services of Mr. John Wharton, the noted English Wyandotte breeder and judge, has been secured for the coming New York show.

We have decided to again start our Monthly Prize Article Department, which proved so popular two years ago, full particulars of which will be found on the editorial page of this issue.

The cash prizes we are offering for articles on different subjects are worth trying for.

There is no such thing as too much poultry. If the yards are crowded, there is always room at the market.

INQUIRIES FROM ALL THE STATES, CANADA AND AUSTRALIA.

Vandalla, Mo., May 13, 1905.
Editor AMERICAN POULTRY JOURNAL.

"Ringlet" Barred Rocks

A fine lot of birds, GRAND in color and barring. One judge said they were the best he had seen this season. They are certainly beauties. Satisfaction guaranteed.

ARTHUR R. PROBST POMEROY, OHIO

A Wonderful Strain of

Buff Cochins

None other possesses such perfect Cochins form, (that massive, globular type), such profuse, yet soft feathering, such color, such size. Bred in line for twelve years.

Parties wanting the best to be had, to win and breed winners, should send for our handsome free booklet and state wants.

H. N. HANCHETT, Jackson, Michigan

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 18 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

The greatest success results from concentrating all efforts upon one line.

Three-fourths of the farmers waste a third of their feed given to hogs because they do not understand the best methods.

The American Swineherd teaches you how to be successful.

How to secure the greatest profits.

How to feed, to double the growth and gain over usual methods.

How to keep your hogs healthy, as only healthy ones are profitable.

How to get 18 pounds of pork out of a bushel of corn, and 20 pounds out of a bushel of wheat, fed to hogs.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader on feeding."

One man writes: "A single instructive lesson in the Handbook on Hog Hygiene" saved me \$50 in feeding a hunch of 40 hogs 60 days over the ordinary way of feeding. It is the best investment I ever made."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' subscription to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition "The Pig Feeders' Manual," worth a \$1 itself.

This equips you for a successful hog business.

AMERICAN SWINEHERD
Como Bldg., Chicago, Ill.

BREEDERS FOR SALE

Barred Plymouth Rocks, White Wyandottes and Bronze Turkeys. Exhibition and breeding birds are ready to go at farmers prices. They have free access to the farm range, and are beauties. Write and get my prices before buying.

HUMPHREY,

Burr St. Factory, Joliet, Ill.

THE KEEPING OF POULTRY HOUSES AND YARDS IN A SANITARY CONDITION.

The old saying that "cleanliness is next to godliness" can nowhere be better illustrated than upon the poultry farm, and there especially at this time of the year must the poultryman be upon the alert.

Perhaps the poultryman's greatest annoyance is the different kinds of vermin with which he has to contend, and of these pests I have in my experience found the small mites which infest so many poultry buildings, to be the worst.

Again I will quote an old saying that "an ounce of preventive is worth a pound of cure," which is only another way of saying that poultrymen should do all in their power to prevent these little pests from getting a foothold upon their premises.

So many of the owners of small flocks are apt to neglect their fowls at this, the "rush of the season," and think, "well, it will not matter if my poultry house goes one or two days without cleaning," but this is the point exactly. Be thorough in all of your poultry work.

Clean the dropping boards every morning and sprinkle with land plaster, sifted coal ashes or fine chaff, and once a week clean the buildings thoroughly and spray the interior with kerosene oil or some good disinfectant which you have tried and know to be effective.

In my experience I have found that a liberal sifting of air-slacked lime over the walls, floors, perches and nests is very effective, for it is a known fact that lice cannot live in dust, which closes the breathing pores of their bodies and smothers them.

The nesting material should be changed once a week and the old material burned, in order that all mites will be destroyed if any chance to be in the nests.

Examine the fowls occasionally and if any lice are found upon them, dust the

whole flock with some reliable powder and watch closely for results, closely examine them again in a few days, and if lice are still found, give them a second dusting. This will generally prove effective.

The condition of the yards is another important point to be considered, and unless they are well cared for and cultivated occasionally they are apt to become filthy, and thus affect the health of your fowls, and of course the profits will stop at once.

A good plan to keep the fowls active is to scatter the grain feed over a portion of the yard in the morning and rake or cultivate it under. This will keep them exercising a good portion of the day.

It is also important to keep a part of the yard to grass or grain to supply the fowls with green food. Otherwise it will have to be supplied from some other source and make an addition to the expense of keeping.

Where plenty of land is available it is advisable to have two yards for each pen of fowls, giving the hens the run of the yards on alternate years, while in the yard not in use can be raised a profitable crop, such as sugar beets, cabbages or sunflowers for winter feed.

L. W. RICHARDSON.

Hammond, N. Y.

PRACTICE WHAT YOU PREACH.

It is not always the man who can write the best article on the chicken business who actually raises the best chickens, but oftener the man who has brains enough to learn what to do and then does it. Theories that ought to work well in a hen's gizzard do not always fill the egg basket to overflowing and air castles are poor things to winter chickens in. And it is better to spend a little time cleaning out your own coops than to spend it all telling the other fellow how to clean his. E. L. Keith, Mt. Vernon, Ia.

\$6.25 Worth of O. K. Poultry Supplies For \$5.00 Freight Prepaid

To get you to test our goods we are making this special offer for a limited time, and will prepay the freight to any railway station east of the Missouri River and north of the Ohio River on the following list:

1-10 lb. Pail O. K. Poultry Food.....	\$1.25
1-50 lb. Sack O. K. Hen Feed.....	1.50
1-15 lb. Sack O. K. Meat Mash.....	.45
1-100 oz. Pkg. Lambert's Death to Lice Powder.....	1.00
1-Jumbo Powder Gun.....	.25
1-3 oz. Box Lambert's Death to Lice Ointment.....	.25
1-16 oz. Package Lambert's Death to Lice Special.....	.25
1-qt. Lathrop Drinking Fountain with Tripod.....	.55
1-Lambert's Poultry Marker.....	.25
1-Volume "Why Poultry Pays" or "How to Build Poultry Houses" (your choice).....	.50

Total..... \$6.25

Send draft or money order with your order for goods. Personal checks not accepted. You must do it now, as this offer is not good after Oct. 31, 1905. This list comprises everything essential to successful poultry raising, and everything is of high quality.

O. K. POULTRY FOOD is a condimental and tonic preparation unsurpassed in quality. O. K. HEN FEED is a balanced ration to be used as a scratch food, while O. K. MEAT MASH, as its name indicates, is to be slightly wet with water or milk and fed as any mash should be. Fed with O. K. POULTRY FOOD hot in the morning, and O. K. HEN FEED in the evening, it will keep your fowls in prime condition and bring excellent results. LAMBERT'S DEATH TO LICE POWDER—to be dusted over the fowls and nests—is today the leading preparation of its kind in the United States. LAMBERT'S DEATH TO LICE OINTMENT is positive death to head lice and a sure cure for scaly shanks.

LAMBERT'S DEATH TO LICE SPECIAL is a powder to be mixed with whitewash or kerosene for painting the woodwork of coops and stables—a fine disinfectant. This is the most liberal offer ever made by any poultry supply house, and made solely to introduce "O. K." goods, which we know will give perfect satisfaction and make permanent customers of those who want good, dependable poultry supplies.

This is an opportunity to secure the best value for your money of the year. It's a bargain or we would not limit the time to October 31st. A chance to get \$6.25 worth of good goods for \$5, freight paid. Order today.

324 Dearborn St., Chicago, Ill.

THE USE OF GREEN FOOD.

A discussion has recently sprung up among poultrymen as to the real office of grit. A new theory is advanced, namely, that grit is not solely nor principally valuable to enable fowls to grind their food, but that from it fowls extract a valuable and necessary article of diet. For example, the coloring matter for the feathers, it is alleged, is derived wholly from this source. This tends to overturn a long accepted theory. But for practical purposes, the poultryman need give himself no concern. All agree upon the necessity for using grit for some purpose, just the same as they agree upon the great value to be derived from the use of green stuff for inducing laying of eggs.

A discussion on this latter subject indeed would be much more profitable. Not that there are two sides to the question, but its importance should be urged and brought home in season and out upon poultry raisers everywhere. A good many do not seem to realize the great good to be derived from supplying hens with clover or alfalfa in the winter time. Some who appreciate its value do not seem to understand how to prepare it for use.

A man who is working great good along this line is Humphrey, the Joliet, Ill., poultryman. He is not only constantly singing the praises of green foods for hens, but he supplies the means for its right preparation. His Rapid Clover Cutter has come to be an article of necessity in hundreds of leading poultry plants. It cuts clover, alfalfa and any like substitute green food in most satisfactory manner. The cutting is done rapidly and the pieces are of uniform short length, one-eighth inch lengths being what he advocates as best. Screens are provided which prevent anything longer than one-eighth inch getting past the knives. The Humphrey cutter is a good machine. People who have not been using green food should investigate it. This will at the same time put them in touch with the man, and enable them to imbibe some of his enthusiasm over the use of clover, alfalfa, etc. He is one of our regular advertisers. Address him as directed in an advertisement found elsewhere in this paper.

THE OVERLAND LIMITED.

To California in Less Than Three Days. The Overland Limited leaves Union Passenger Station, Chicago, 6:05 p. m. every day. Route—Chicago, Milwaukee & St. Paul railway, Union Pacific and Southern Pacific. Less than three days via Chicago to San Francisco via Omaha. Descriptive folder free.

F. A. MILLER,
General Passenger Agent, Chicago.

A FREE SAMPLE OF HIGH GRADE READY ROOFING.

Elsewhere in this paper will be found an advertisement of AMATITE Roofing, which many of our readers have already used. It comes in rolls so that any one can lay it easily. Sufficient nails and cement to complete the job are placed inside of each roll. Its price is exceptionally low, and it is just the kind of a roof that a thrifty farmer will appreciate. A free sample and interesting booklet will be sent for the asking to any of our readers who will write at once. Address the Barrett Manufacturing Company at any of the following offices: New York, Chicago, Allegheny, Kansas City, Cincinnati, Philadelphia, Cleveland, Minneapolis, New Orleans, St. Louis.

THERE'S A BIG DIFFERENCE.

Laundry soap is intended for coarse work, such as washing clothes. Toilet soap is suited to taking the dirt from the skin. Shaving soap is different—or ought to be. It should thoroughly moisten the hairs, hold them firmly against the razor and then leave the skin smooth, cool and velvety. Williams' Shaving Soap will do just this. The J. B. Williams Co., Glastonbury, Conn., have made a specialty of shaving soap for nearly three-quarters of a century, and it is the "only soap fit for the face." In another column they offer to send a free trial sample. Be fair to your face and send for it.

H. H. & E. M. Coburn, Memphis, Mich., will soon have a neat catalogue ready for customers for the asking. Don't fail to get one, for you will find something interesting about their Silver Penciled and Columbian Wyandottes and their S. C. Buff and White Leghorns.

BRAND YOUR POULTRY.

It's easy to keep records of special breeds and to keep chicks and hens separate. A great many poultrymen procrastinate on this point and regret it when a chance for a good many dollars in profit has slipped by. Then they wish they had put on their young chicks the "Ideal Leg Band" made by Frank Myers, Freeport, Ill.

It's made of aluminum; can't come off until removed intentionally by owner. No fuss to put it on—as quickly taken off. It cannot rust or break off. The lock is firm and strong. The band being aluminum, it never can get sharp and irritate the scales on a fowl's leg.

The prices of the Ideal Bands are so reasonable that poultrymen everywhere can supply themselves at a merely nominal cost—12 for 15 cents; 25 for 30 cents; 50 for 50 cents; 100 for 75 cents.

Mr. Myers sends his sample band and circular on Barred Plymouth Rocks for 2 cents to any reader of this paper.

DRY FEEDING NOT THE ONLY WAY.

Dry feeding has been strongly advocated, especially the use of Steinmesch Extra Quality Quick Meal Chick Feed. But as the birds grow, and especially for matured fowls, a morning mash made up of the right kind of feed and properly proportioned and properly fed is part of the success of the chicken business. Steinmesch Early Breakfast Mash is prepared under the personal supervision of Mr. Henry Steinmesch, one of the most experienced poultry men in the country. There is no secret about this feed; it is made up of choice winter wheat bran, large and flakey middlings, kafir corn meal, alfalfa meal, linseed meal, cotton seed meal, crushed oats, beef meal, bone meal, charcoal, etc. Any one having the ingredients and the knowledge of how to properly proportion them and the facilities for blending, can put it up as well as they can. This feed is a forcing feed and a conditioning feed and a fattening feed all in one: nothing like it on the market. It is really indispensable for growing chicks and moulting fowls and the price is so reasonable that every one can afford to buy it. A great big 100-pound sack for \$2.00 will feed 50 chickens 40 days. See ad on another page and don't hesitate to send for free circular.

PERSONALLY CONDUCTED TO CALIFORNIA.

Via the Chicago, Milwaukee & St. Paul Railway.

Leaves Union Passenger Station, Chicago, 10:25 p. m., Tuesdays and Thursdays, for Los Angeles via Kansas City, Pueblo and Salt Lake City. Judson tourist car parties via the Chicago, Milwaukee & St. Paul railway. A comfortable, inexpensive and enjoyable way of crossing the continent. Tickets for double berths, Chicago to California, \$7.

F. A. MILLER,
General Passenger Agent, Chicago.

KEHOE, KY., Sept. 10, 1905.
Editor AMERICAN POULTRY JOURNAL, Chicago, Ill.

Dear Sir: * * * I have not raised as many Black Breasted Red Games this season as usual, but what I have raised are the finest specimens I have ever sold. Last spring I purchased a fine brood cock at what my neighbors called an enormous price, \$11, but now I see that I purchased him very cheap, as his offsprings are simply elegant. I expect to take larger space of advertising next season, as I sold fine lots of eggs at \$2 per sitting. Thanks to my little half-inch in your valuable paper this year. Wishing you success, I am,

Yours truly,

ORVILLE D. CHINN.

At the Indiana State Fair, Sept. 11-16, 1905, C. S. Byers, Hazelrigg, Ind., made the following winnings on his Orpingtons: S. C. Buffs, 1st cock, 2nd cockerel, 2, 3 pullets, 1st pen; S. C. Whites, 1st cock, 1, 2, 3 hens, 1, 2, 3 cockerels, 1, 2, 3 pullets, 1st, 2nd pens; S. C. Blacks, 1st cock, 1, 2, 3 hens, 1, 2, 3, cockerels, 1, 2, 3 pullets, 1, 2 pens.

The attention of our readers is called to the advertisement of George L. Harding, Binghamton, N. Y., who makes a specialty of poultry foods and remedies. Mr. Harding is too well known to readers of AMERICAN POULTRY JOURNAL to need further comment. Send for his free book, "What to Feed and How to Feed It," and mention AMERICAN POULTRY JOURNAL.

MONEY-SAVING POULTRY SUPPLIES

MAKE YOUR PROFITS LARGER

Cheap and inferior goods will never pay you. We have the best selected stock of supplies in America. Jewel Chick Feed is fast taking the place of all other grain food. It does the work. Chicks live and grow like weeds. Our Alfalfa Meal and Beef Scraps are superior goods. No other brands equal them.

We carry full line of Coops, Egg Boxes, Spray Pumps, Drinking Fountains, Feed Boxes, Grit Shells, Beef Meal, Midland Food, Granulated Bone, Blood Meal, Louse Powder and Paint. Our prices are right.

Western Representative MODEL INCUBATORS and BROODERS

Everything for the Poultryman

Manufactured by Chas. A. Cyphers

Phillip's Death to insects kills lice and mites on poultry, also any insect. Write for free circular and prices.

No. 1-SINGLE ROOST STYLE

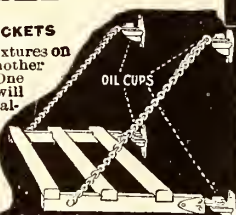

WHEN YOU BUILD

install DAVIS ANTI-LOUSE ROOST BRACKETS

The most practical and up-to-date poultry fixtures on
 the market. Don't let your old house go another
 season without them. It's false economy. One
 or two good birds saved from the ravages of the vermin will
 pay for the equipment of a house, while the increased vital-
 ity of your flock will return the cost many times over.

Prices: No. 1 style with screws, 75c per pair; 3 pair, \$2.00; 6 pair,
 \$3.50. No. 2 style complete with chains and screws, \$1.25 per set; 3 sets, \$3.25;
 6 sets, \$6.00. F. O. B., Battle Creek, Mich. (Prices do not include roosts.)
 Write for catalogue of up-to-date Poultry Specialties, or ask your dealer for our goods.

The KEYES-DAVIS CO., Ltd., Mfrs., Dept. B Battle Creek, Mich.

No. 2-MULTIPLE ROOST STYLE

FEED FOR EGGS

Cut your poultry feed bill in two, double your egg production,
 have a healthy, vigorous flock by getting an Open Hopper

Humphrey GREEN BONE AND VEGETABLE Cutter

guaranteed to cut more bone, in better condition, in
 less time and with less labor than any other. It is the
 original and only real open hopper machine, operated
 by one hand, and cuts as fast or as easily as you like.
 No screws or split nuts to wear out; no springs to ad-
 just; easily kept clean. Used and endorsed by
 successful poultry men everywhere.

We charge nothing extra for a Free Trial if you want it.
 For new catalogue send your name to

HUMPHREY, White St. Factory, JOLIET, ILL.

The Humphrey Rapid Clover Cutter cuts finer and more rapidly
 than any other, and makes the best poultry food. Ask about it.

More Eggs—Less Feed

SUCCESS WITH POULTRY.

In the first place we must have good
 stock, pure-bred fowls if possible and a
 strain that has been bred for the pur-
 pose in view, whether it be large, quick
 maturing fowls for market purposes, ex-
 tra fine layers or a general purpose fowl.
 The experienced poultryman knows there
 is almost as much difference between
 strains of the same breed as there is be-
 tween distinct breeds, not in looks but
 in general characteristics. It is the way
 the fowls have been bred that counts,
 therefore if we wish to have the best
 possible start we will secure our stock
 from some reliable breeder who has bred
 along the lines we have in view; such
 fowls can be depended upon to repro-
 duce their kind and therein consists their
 value. The location and buildings are
 next to be considered. Fowls will not
 thrive upon a heavy, poorly drained
 soil; they will be subject to colds and
 the chicks will be slow maturing. If
 one has a well drained site and a south-
 ern exposure much less care will be re-
 quired to insure success. We do not be-
 lieve in expensive buildings but they
 should be large enough to provide plenty
 of fresh air without exposing the fowls
 to a draft.

The ideal house in a mild climate is
 one tightly closed on three sides with
 one side inclosed with laths or wire
 netting. An abundance of fresh air
 is thus ensured and the fowls will be
 hardy. If confined in close quarters at
 night upon coming out in the cool morn-
 ing air the fowls are sure to become
 chilled and bad colds or roup is the re-
 sult. The matter of feeding is of vital
 importance as the health of fowls as well
 as the financial success depends largely
 upon proper feeding. We believe in giv-
 ing laying hens all they will eat. They
 will not become too fat if rations are
 properly balanced. It is not too much
 food but too much of a kind that is
 hurtful. When allowed free range pou-
 ltry will come pretty near balancing their
 own ration, but when confined we must
 supply the various elements they would
 otherwise obtain from natural sources.
 Grains, animal food, green stuff and grit
 must be provided. The former in as
 great variety as possible, corn, wheat,
 oats and barley combined with shorts,
 bran and chop. Animal food is of great
 importance; without it we lose nearly
 one-half the eggs we would otherwise
 obtain.

We feed blood meal to our hens every
 day during the moulting season and
 every other day during the remainder of
 the year. If we omit it for a few days
 the difference in the number of eggs
 laid becomes very noticeable. We pay
 five cents a pound for the blood meal
 but as it is over 75 per cent pure pro-
 tein, only a small amount is required;
 it is the results as well as the cost that
 we must consider. With a poorly bal-
 anced ration we get very poor returns
 for the cost of feeding; therefore we
 know it is cheaper to feed right. We
 are aware that most farmers exchange
 their eggs for groceries as they are al-
 lowed one-half to one cent per dozen
 more than if cash was paid, consequently
 the farmer's wife must depend upon the
 resources of the farm for her poultry
 supplies. This is all right during the
 summer, but during the winter months
 when the ground is frozen and bare the
 hens require special feeding if eggs are
 to be obtained when prices are highest.

We should take the cash price for our eggs and buy the articles necessary to supplement the home supplies and thus obtain a good many more dozen eggs. Green stuff is necessary for the health of the fowls and if vegetables are not available, clover or alfalfa meal may be had for \$1.50 per 100 pounds, and this, when scalded and fed in the mash will give most excellent results. Oyster shells or lime in some form is needed. Lime is contained in all the grains but not in sufficient quantity if the hens are laying heavily. A small amount of stimulants in the mash will do no harm and we rather favor the use of a little cayenne pepper on cold mornings, provided plenty of good nourishing food is given, but condition powders and other stimulants fed with a corn ration will do more harm than good. Stimulants may start the egg-producing organs into activity but they cannot furnish the elements necessary to manufacture eggs.

ELLA L. LAYSON.

West Berkeley, Cal.

THOSE FIGHTING COCKERELS.

What shall we do with them? How care for them at the least expense?

It is inconvenient and costly to furnish every strong, vigorous fighting cockerel with an apartment for himself. He has to be fed, watered and cleaned for months or years.

A friend of mine had 3 S. C. White Minorca cockerels. The strongest and most vigorous one killed the other two and then died himself.

I have seen it recommended to tie a rope to the leg of a fighting bird, be it male or female. It seems like a good thing.

Uncultivated vigorous boys are like cockerels, just spoiling for a fight with a weaker boy.

Every fighter is a coward, whether he be boy, beast or bird he is afraid to tackle one stronger than himself. This is the rule, there may be exceptions. The thief, the hold-up man, the murderer are cowards. They go in pairs or trios. They pounce upon their victim unawares and use brass knuckles, billy, sandbag, pistol, etc. See how they howl for protection when caught.

The police find a club the most effective method of fighting a mob.

If every time a boy aggressively whipped another, his mother would spank him more severely than he punished the other boy, he would soon quit and would

live in harmony with boys around him.

The jail or penitentiary is preferable to the thug to a dose of his own medicine. Fowl nature and human nature have much in common.

Acting along the above lines of thought we manage to have our male birds live together in harmony and even love one another.

We keep only Single Comb White Minorcas and it is of those alone we speak. Their large combs enable us to practice what we preach.

We have 5 cock birds in the same yard, occupying the same roost without friction. We have 5 large, early hatched cockerels of nearly the same size, agreeing in the same pen.

How do we do it? By spanking their combs with the flat of our hand, until they learn to live in harmony with one another. We keep them shut up together in small pens where we can see them often, and catch them easily. The first male that severely punishes another is immediately caught in the act, and his large comb (not his head) is slapped on both sides until we believe it smarts, tingles and burns.

When let loose, he retires to a quiet corner and meditates over the situation, knows how it feels himself, and resolves right then and there, to be a wiser and quieter bird in the future. It does not take many such lessons to entirely reform him.

The following is our method. The fowl is easily picked up in our small enclosure. We grasp his legs in our left hand and hold his body under our left arm.

We now either kneel on our left knee or rest our right foot on a chair or other support. He is then laid lengthwise on our right thigh with his tail toward us, and his comb hanging over our right knee. Our open hand slaps his comb, first on one side, then on the other, until we think he has been punished enough. His head is not hurt. His comb is not bruised nor cut.

A few treatments of this kind soon subdues our most tenacious fighters.

E. A. MCWILLIAMS.

Chicago, Ill.

Next comes Hagerstown fair! Mr. Spahr will have direct charge, as formerly, of the poultry department, and it is said that some large cup will be offered to commemorate the memory of the lamented John L. Cost, who was late superintendent.

NURSERYMEN'S CONVENTION EXTRAORDINARY.

There was a session of the Southern Nurserymen's Association which lately held its annual meeting at Norfolk, Va., which was not on the original program. Upon final adjournment, twenty-five or more of the leading nurserymen of the South, including the vice president of the association, made up a special party to visit the nurseries of J. G. Harrison & Sons at Berlin, Md. For two days this large party were the guests of Harrison & Sons. On Thursday, August 17th, some five hours were spent in driving through the Harrison Nurseries, which cover over 1,000 acres, including the old Commodore Decatur farm, of historic memory. The party consisted largely of the active southern competitors in business of the Harrison people. Needless to say the extent and condition of the Harrison Nurseries was an eye-opener to them. On Friday morning the vice president called a session extraordinary of the association, at which speeches were made showing the hearty appreciation of the visitors and resolutions were passed expressing the appreciation of the entire party to the Harrison people and particularly to Mr. Orlando Harrison and family, who had the entertainment in charge. After this session the party were taken to Ocean City, where they availed themselves of the privileges of the surf and at noon went on their way rejoicing to their homes.

SUPERIOR BUFF COCHINS.

The Buff Cochins male shown in the picture is a sample of what may be seen in the yards of H. N. Hanchett of Jackson, Mich. Mr. Hanchett (who, by the way, has been a constant advertiser in the A. P. J. for the past ten years) is a true fancier and has made this one variety his special study for years. He practices line-breeding, carefully pedigreeing every chick hatched, and the result of his years of experience and progressive methods show plainly in the magnificent specimens he is shipping all over the country.

Mr. Hanchett writes: "I have 'em better than ever this year. Scores of cockerels and pullets that are solid buff, no white, no black, immense cushion development, short, low tails, and such feathering! You can hardly see under them and yet there is not a vulture hook on the place."

One of his customers, R. D. Dunbar of Dallas, Tex., took 1st on cockerel and 1st and 2nd on pullets at the North Texas Poultry Association. The cockerel scored 94½ by Judge Loring Brown.

Another customer, Charles O. Carr, of Murdocksville, Pa., writes that he never saw such marvelous feathering and coloring on Cochins before, and in shape they are fine, when speaking of birds recently bought from Mr. Hanchett. He regrets that he did not buy the birds sooner, as he believes he could have secured 1st at Pittsburg.

The Excelsior Wire & Poultry Supply Co., Dept. O., 26 and 28 Vesey street, New York City, are making their thirteenth annual sale of Banner Egg Food and Tonic. This sale is one month only during the month of November. Their 212 page catalogue is free to all readers of AMERICAN POULTRY JOURNAL, mentioning the above Dept. number.

Paroid Roofing

Poultry Houses Roofed for Good. Are you looking for the ideal roofing and siding for poultry houses and farm buildings? The owners of the farm on which the above illustration was made, have found it. They are the largest duck raisers in the world, and are but one of the thousands of poultrymen, farmers and others who use

PAROID ROOFING

for roofs and sides in preference to all other roofs. They have found it the most economical because it is the most durable and satisfactory. Paroid is made of extra strong felt, with extra saturation, which makes it water proof, spark and cinder proof, cold and heat proof, gas and acid proof. Extra tough, extra durable. Light slate colored—contains no tar—does not crack, run nor taint rain water. Any one can lay it in any kind of weather.

Send for Sample.

The strongest argument is to see a Paroid roof that has been laid a few years. The next best thing is to see a sample. Send us your name today and we'll send a free sample and name of nearest dealer. Enclose a 2c stamp and we'll send new book of complete plans for poultry and farm buildings.

(Established 1817) Originators of the Complete Roofing Kit in every roll. F. W. BIRD & SON, Makers, East Walpole, Mass., Chicago, Ill.

GINSENG \$50,000 worth can be raised on one acre. Write for prices of roots and seeds. Begin preparing ground now; proper time for planting in the fall. Complete cultural directions free with orders. Illustrated book, telling about its history, cultivation, profits, market, etc., for 25c. Address Wisconsin Ginseng Gardener, 601 Adams St., Wausau, Wis.

Price, \$7.50. Catalogue free. Simple, convenient, practical. W. L. Rouse, Manufacturer, 157 La Salle St., Chicago, Ill. Chicago Poultry Supply House Distributor, 647 Lakeside Bldg., Chicago, Ill.

FREE FOR 15 DAYS' TRIAL

We want every poultry raiser, whether he keeps ten fowls or ten thousand, to know the full advantage of feeding fresh cut

green bone to his flock. In order to prepare the bone and have it fresh every day you will need a Bone Cutter. We are going to make it easy for you to get one. We will ship any one of our different size

Dandy Green Bone Cutters

to you without a cent in advance and give you 15 days' free trial so that you may test the machine and test green bone as a money-making feed to increase your egg supply and to improve the health of your birds. We manufacture Bone Cutters exclusively and our prices are the lowest at which a thoroughly reliable machine can be sold. 15 days' free trial plan enables you to learn how honestly and substantially "Dandy" Bone Cutters are built. If after 15 days' use you are entirely satisfied, keep it; if not, we take it back—trial costs you nothing. Free catalog and valuable pointers on feeding poultry—describes the various sizes we make and tells why the "Dandy" will be a money-maker for you. Write for it. STRATTON MANFG. CO., BOX 17, ERIE, PA.

Secretaries are requested to send us the latest news and announcements for this department.

ILLINOIS STATE POULTRY SHOW AT DANVILLE, ILL.

The Twelfth Annual exhibition of Illinois State Poultry Association will be held at Danville, Ill., Jan. 2 to 7, 1906.

The officers of Illinois State Poultry Association are: President, A. G. Murray, Springfield; vice-president, John Cooleedge, Galesburg; secretary, O. L. McCord, Danville; treasurer, S. S. Noble, Bloomington; superintendent, A. L. Moore, Normal; executive committee: J. A. Leland, Springfield; Dr. F. A. Gelder, Palmyra; W. E. Russell, Danville; J. J. Klein, Macon; Robt. Joos, Peoria. The officers are all men of wide experience in conducting poultry shows who will be present the entire week of show and give their personal attention in general. Every effort will be made to see that the birds on exhibition are properly cared for and that every exhibitor receives fair and honest treatment. Remember the Illinois State is the show with a \$5.00 premium and with a 50 cent entry and every exhibitor in attendance will receive his premiums in full before leaving the show. The judges that are selected so far are: W. S. Russell, Ottumwa, Ia.; James A. Tucker, Concord, Mich.; Frank Heck, Chicago; W. C. Pierce, Indianapolis; Geo. A. Heyl, Washington, Ill.; and Robert Joos, Peoria, Ill. The others will be named later.

The executive committee used good judgment in selecting the city of Danville for the next state show as it is known throughout the United States as a great poultry center.

Vermilion county has a population of over 80,000, has 21 incorporated villages and five active poultry associations, the Danville, Hoopston, Catlin, Georgetown and Potomac associations. The city of Danville has a population of 40,000, is on the main lines of the Wabash, Chicago and Eastern Illinois, Big Four—Cairo Division; St. Louis division of C. & E. I., Chicago, Southern Danville & Indiana Harbor Railroads, also 20 miles of street railway tracks radiating to all parts of the city. The Danville and Vermilion County Association have joined with the state association to make the next show the greatest of them all. For any information address the secretary, O. L. McCord, Danville, Ill.

HAUBSTADT, IND.

The nineteenth annual exhibit of the Old Reliable Wabash Valley Poultry, Pigeon and Pet Stock Association will be held at Haubstadt, Ind., December 18-23, inclusive, 1905.

Ben S. Meyers of Crawfordsville, Ind., will do the judging for us this season. Exhibitors will be treated with every courtesy and their birds given the best of care and treatment.

Our former shows have been a success and this promises to excel all others and will rank as one of the best score-card shows of the year.

Premium list will be ready about Nov. 1. A copy may be secured from the secretary, D. T. MacClement, 1024 Powell Ave., Evansville, Ind.

PONCA CITY, OKLA.

The Northern Oklahoma Poultry and Pet Stock Association have incorporated under the laws of the Territory of Oklahoma and will hold their eighth annual shown in Ponca City, O. T., Dec. 19-23, 1905. M. S. Fite, judge. Catalogue and premium list will be out Nov. 1. J. Flem Smith, Sec.

KITSELMAN BROS.,
Box 295 MUNCIE, INDIANA.

MICA CRYSTAL GRIT DOES THE WORK

It is no experiment, having been used successfully for twelve years and is the highest grade article of its kind in use.

Necessary proportion of mica, quartz, iron, magnesium.

Regulates digestion by properly assimilating the food, a process absolutely necessary to health and productiveness in poultry.

Food not assimilated is food wasted. Mica Crystal solves the problem and makes the poultry industry profitable.

Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Ignorance of it has cost millions. Grit is to fowls what teeth are to other members of animal creation. Mica Crystal never loses its sharpness, it is the best.

Let us prove the truth of what we say by filling a sample order for you.

D. B. SMITH & CO. Utica, N. Y.

3

LEE LEADERS

LEE'S Egg Maker

Do you get "eggs when eggs are high" - in winter? **Lee's Egg Maker** makes them for others - will for you. It provides the necessary elements for egg and shell. Furnishes fowls just what they crave and need. Acts on the egg-producing organs, and turns food into eggs instead of fat; keeps fowls healthy, brings them into breeding season strong, vigorous, and in the pink of condition. Makes **fertile eggs** - lots of them. It's the **natural food** for winter eggs. Price 25c, 50c, and \$2. Ask your dealer or send **direct** to us.

LEE'S Lice Killer

The liquid preparation that kills lice, mites, and all vermin, both by vapor and contact. Easy to use. Paint or spray it on the roosts and walls - **that's all**. No hanting, dusting, dipping or greasing. No individual treatment of fowls. A lousy hen won't lay - rid her of lice with **Lee's Lice Killer** and watch her work. Does not injure fowls or plumage. Price: Qt. 35c; ½ gal. 60c; 1 gal. \$1. Ask your dealer or send **direct**. "Mandy's Poultry School" - 32 pages valuable poultry information - **Free**. Send stamp.

LEE'S Germozone

the best poultry medicine. For Roup, Colds, Frosted Combs, Canker, Inflammation of the Throat, Bowel Complaint and Chicken Cholera. Sick hens don't lay - dead chicks don't sell. Keep them alive, healthy and **profitable**, with **Germozone**. Price 50c, postpaid. Ask your dealer or send **direct** to us. Send for new Calendar and Egg-record, free. Tells all about diseases of poultry and how to cure them. Success of poultry depends upon the health of your fowls. **Germozone** is a reliable remedy you should keep on hand.

GEO. H. LEE CO.

Write for 1906 Catalog of "Mandy" Lee Incubators, Brooders, New features - new sizes - new prices. None better.

OMAHA, NEB.

BIRMINGHAM, ALA.

The Alabama Poultry and Pet Stock Association will hold its show Dec. 12th-15th, 1905, at Birmingham, Ala. This is one of the largest shows of the South, if not the largest; this is their ninth show. They expect to make this the large or Banner show of the State. The premium list is liberal and they guarantee to pay every dollar. S. B. Johnston, Judge. Chas. Barber, Secretary, 216 Twentieth St., Birmingham, Ala.

GENERAL PORTER ON PAUL JONES.

The October *Century*, which will be issued on the one hundred and twenty-sixth anniversary of the battle of the Serapis and the Bonhomme Richard, will contain the first detailed and authoritative account ever published of the recovery of the body of John Paul Jones, written by Gen. Horace Porter, LL.D. It is to the unselfish zeal and patriotism of General Porter that the United States owes the recovery of the remains of its first naval hero. While ambassador to France, General Porter, on his own initiative and at his own expense, began a personal search for John Paul Jones's body, in June, 1899. The details of this search, its final success, the rigorous verification of identity, are all covered in General Porter's story, which is to be fully illustrated from photographs.

FOR THE HOUSEWIFE.

In housekeeping liberality is often the best economy, particularly at the beginning of winter, when a wise expenditure of a considerable sum of the season's food supply may mean the saving of many a dollar. Some practical advice in this direction is given by Isabel Gordon Curtis in the October *Delineator*, which contains many features of housewifely interest. "Hallowe'en Party Novelties," illustrating delicacies for Hallowe'en refreshment and entertainment, is a seasonable item, and other culinary topics are "Serving Game Dishes," "Celery Novelties," "Home-Made and Whole-Wheat Bread," and "A Rice Roundelay." In addition, Mary Taylor-Ross has some helpful notes on "Little Things of Housekeeping."

Theodore Roosevelt describes his recent "Colorado Bear Hunt" in the October number of *Scribner's Magazine*. The account is written with the vigor and vivacity which are so characteristic of the author. The individuality of the various dogs in the pack, the traits and characteristics of the guides and packers, the delightful humors of everyday life in camp, the excitement of the chase - all are depicted here with skill and force; indeed, any one who reads this narrative will have a stirring picture of exactly what happened during the weeks that Mr. Roosevelt was out of the world in the Rocky mountains. His companions of the hunt, Dr. Alexander Lambert and Philip B. Stewart, took many excellent pictures of the various incidents, and they are reproduced with the article. One of the most striking, "Death of the Big Bear," forms the frontispiece of the number.

This is to certify that the Rocky River Poultry Co. has purchased all of the stock originally owned and bred by me, which includes all of my famous New York winners. W. W. BABCOCK, Bath, N. Y.

This is one of the largest deals made in this variety, as Mr. Babcock's string of New York winners are a fine lot of birds. Mr. Babcock and the Rocky River Poultry Co. cleaned up all of the 1st, 2nd and 3rd prizes at the Madison Square Garden this year in the Rose Comb White Leghorn alley. This with the killing this company made at St. Louis, five firsts and four seconds, gives them without a doubt one of the finest lot of prize winners and breeders ever owned by any one company of any variety. If you want anything in this variety, get it at the home of the world's best, as they have a fine lot of show birds ready for shipment. A beautiful catalogue sent free if you mention this paper. Address the Rocky River Poultry Co., 59 Superior street, Chicago, Ill., U. S. A.

The Otter Creek Poultry Farm Company, Watertown, N. Y., are closing out their Barred Plymouth Rocks and S. C. White Leghorns at bargain prices, and in the future will breed only their "Otter" strain of S. C. Black Minorcas.

Keep Poultry for Profit

Start the Winter Right.

It's real economy to equip yourself with proper appliances and supplies to put your fowls in a money making condition. Get our new Catalogue, a veritable encyclopaedia of what the Poultryman needs for profit. Everything in it has been tried and tested on our Millhook Poultry Farm. We know they are right, and we sell them at money saving prices.

POULTRY RATIONS

Special Rations for Special Purposes.

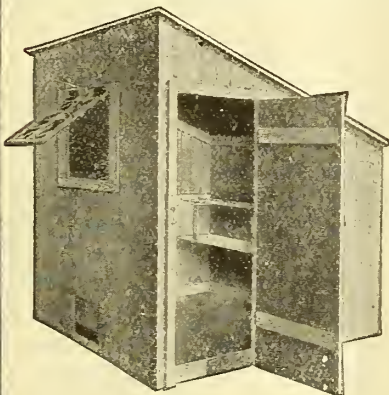

Miller's Chick Feed. A scientifically balanced ration of fifteen different kinds of grains and seeds. Nothing but clean, sound grains are used—no chaff or by-products. It is a bone builder and health producer. Guaranteed to raise more chicks than any other ration compounded.

Miller's Scratching Food. A highly nutritious, perfectly proportioned mixture of sound grains to promote health and vigor. Free from filling or adulterations. Fowls will scratch all day and clean up the last morsel.

Miller's Laying Food. This ration supplies the fowls with just those elements needed to promote egg production. It is a mash containing select, wholesome grains, beef meal and green foods in proper proportion.

Miller's Forcing Food. This is a highly concentrated food compounded especially to promote rapid development of broilers and roasters. It has no equal for this purpose.

Besides the foregoing rations we manufacture and recommend Miller's Beef Meal, Miller's Beef Scraps, Miller's Poultry Bone, Miller's Crushed Shells and Miller's Alfalfa Meal,—the sweetest, purest, greenest and most economical green food on the market.

Ideal Portable Poultry House.

This is the most complete, convenient and serviceable Portable Poultry House ever designed. It is made of select lumber, carefully matched boards finished on both sides. It comes in five sections and any one who can drive a nail can put it up in a few minutes. It has a large door, a large window, with six lights, and the window is covered with wire netting so fowls cannot break the glass or animals enter. Besides, there is a little sliding door for the fowls to pass in and out when you desire. There are two roosts which will accommodate 20 or 25 fowls and a wide dropping board below. Roosts and dropping board are hinged to the back wall and may be swung down in the morning to be out of the way and easily cleaned. You can move this house about the place or take it with you when you "move." Fully illustrated and described in our big 1906 catalogue. It is shipped in knock-down form and goes as lumber, which means the lowest freight rate. Every poultryman will find it a profitable investment. Price complete only \$18.00

Our Complete Line of Poultry Supplies.

We manufacture and have for sale everything needed to raise poultry for profit. Our long experience on Millhook Farm has given us the opportunity of determining to a certainty the superiority of every article we offer, and our unequalled manufacturing facilities and enormous business enable us to sell at the lowest possible prices. Our list of supplies includes such necessary articles as Brood Coops, Bone Cutters, Grinding Mills, Corn Shellers, Caponizing Instruments, Drinking Fountains, Feed Troughs, Leg Bands, Miller's Liquid Lice Killer, Lice Powder, Chicken Punches, Roofings, Egg Testers, Ideal Lamps and Regulators.

We are in position to fill all orders promptly, either from our factory or branch houses.

Standard Bred Fowls and Eggs.

Our Millhook Farm is the most extensive farm in the world devoted exclusively to rearing pure bred fowls for breeding and exhibition purposes. The stock we are offering this year embraces all the standard varieties, and never in our 20 years of business have we had so many specially fine fowls. If you want to start on a big or little scale, if you want new, pure, strong blood in your flock, send us your order for birds. If you want eggs for hatching, guaranteed true to variety, from vigorous, healthy stock, we can supply you at right prices.

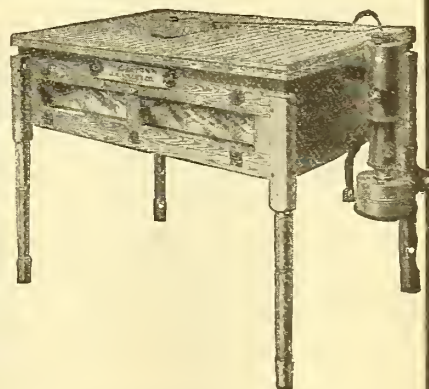

We can fill your order promptly and guarantee satisfaction.

Ideal Incubators and Brooders.

Ideal Incubators and Brooders have made a world wide reputation for hatching and raising a larger percentage of strong, healthy chicks than any other poultry machines ever made. Our iron bound guarantee of satisfaction or your money back goes with every machine we sell. The Ideal Incubators are made in three sizes; 60, 120 and 240 egg capacity. Every one is built of the best material that money can buy and they are made by The Man Who Knows. They are equipped with the most sensitive, reliable, automatic regulator ever devised. They are self-ventilating as well as self-regulating, and the Ideal lamps and heating system combine to make a hatcher that cannot be compared to anything else on the market for reliability, ease of operation, economy, durability and Profitable Hatches.

Ideal Brooders, outdoor and indoor, are equipped with a beating and ventilating system that places them in a class by themselves. They are large, light and roomy. No crowding or smothering, for one corner is as warm as another. Our brooders are fitted with a regulator that really does regulate. Two compartments to each brooder, a hovey and an exercising room with a felt curtain between which the chicks can pass through. The floors are four inches above ground. No chance of dampness or vermin. You won't know the possible profit of poultry raising until you have an Ideal Brooder. Investigate.

Send for Free Book, "Poultry for Profit." The largest, finest and most complete catalogue we have ever issued. It illustrates and describes everything needed to raise poultry for profit. It contains information that will help you over the hard places. Sent free, postpaid, to any one interested. Address

THE J. W. MILLER COMPANY, Box 56, FREEPORT, ILL.

Questions and Answers

Questions asked by subscribers will be answered in this department.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please tell me what breed will not pull feathers in confinement; we have more trouble with that than all else; have had to sell White Plymouths, Rocks and White and Silver Wyandottes on that account.

Mrs. S. G. F.

Ellettsville, Ind.

Answer:—This habit is usually contracted during the winter when the fowls are confined in small quarters and do not have enough exercise. It is not the fault of the breed, but the way the fowls are taken care of.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer through your "Question and Answer Department." I received some Rose Comb Buff Orpington eggs from a fancier who claims he has about 60 varieties of chickens and the chicks are about feathered and they have some black feathers in their tails and around the neck. The tips of the feathers on some of them are black, that is, just the end of the feathers. The under-color is a nice buff. Are they to be buff throughout and will they do for breeders or will they not?

J. F. B.

Martinsburg, W. Va.

Answer:—The Standard calls for surface color to be one even shade of rich golden buff throughout. Under-color, a lighter shade, as free as possible from all foreign color. "Black or white showing in wings or tail shall be considered alike objectionable." These birds can be used for breeders, but it will take some time to breed all these black feathers out, and if you can procure birds with a solid buff color it would be advisable for you to do so.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please tell me where I can buy the egg cartons and egg stamps mentioned in your September number.

Mrs. E. S.

Genoa, Ill.

Answer:—These can be secured from the poultry supply houses. A number of whom advertise in these columns.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer in your October issue the following: What is the Standard weight of Barred Plymouth Rocks, Single Comb Brown Leghorns and Cornish Indian Games?

Benson, Nebr.

Answer:—Plymouth Rocks—Cock, 9 1/2 lbs.; hen, 7 1/2 lbs.; cockerel, 8 lbs.; pullet, 6 1/2 lbs. Indian Games—Cock, 9 lbs.; hen, 6 1/2 lbs.; cockerel, 7 1/2 lbs.; pullet, 5 1/2 lbs. There is no Standard weight for Leghorns.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Will you please answer the following questions in your question department of your most valuable paper: 1. Is a concrete or cement floor in a poultry house harmful to poultry in any way? 2. What points distinguish the

standard bred Golden Laced Wyandottes? Please give the points or describe. 3. I had 100 hens in my poultry house last winter. The house is 16x12 feet. I got two and three eggs per day. Now, if two and three of these hens could lay why could not all lay?

E. J. S.

Cropsey, Ill.

Answer—First—No. Second—The American Standard of Perfection will give you the desired information. This is a copyrighted book and therefore we are not at liberty to publish descriptions therefrom. Price of this book is \$1.50 and no poultryman can raise exhibition stock without it. The new edition is just being printed, and if you will send your order to us same will be forwarded to you at an early date. Third—You had three times too many fowls in your house. That was the reason you did not get more eggs. The two or three hens that did lay were more vigorous than the others and therefore stood the crowding better and were able to produce a few eggs.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—How many chickens, for eggs, can be ordinarily handled on 12 acres open and eight acres in thin woods and about yearly profit? How many, if food is raised, and how many, if food is not raised? Rough estimate will do.

Fallston, Md.

W. A. H.

Answer:—This all depends on the care given and the convenient arrangement of houses and yards. Two thousand laying hens can be handled very nicely on a place of this size. Feed can be bought about as cheap as it can be grown, except vegetables. There should be a net profit of 50 cents per head.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Please answer in your next month's issue if poultry, in winter time, will be as healthy in steam warmed and well ventilated house as a house not equipped with steam? Also what process is used to produce all pullets or all cockerels, or as nearly as possible.

Omaha, Neb.

N. K. M.

Answer—Fowls will be healthier in a well ventilated house without artificial heat. There is no way of controlling the sex.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer in your October issue the following: In the spring hatching I had three small chicks hatch which acted peculiarly as soon as hatched.

They would try to straighten up and when they did so their heads would jerk and continue so, striking their heads on their backs, and they then had no control of their bodies.

After twelve (12) hours, they would go jerking and tumbling heels over head constantly unless held. If I held their heads down and bodies firmly, they appeared to be bright and would want to eat, but if they tried to eat, they would

commence their acts as if it were St. Vitus' Dance.

Upon close examination there appeared to be the second head; the second head being at base of real head and on neck. It was a hard lump and shaped like the skull bone.

Last season my mother had three (3) chicks the same and knowing no remedy we killed them all. The father and mother birds were vigorous, bright and healthy—not related.

Will you kindly explain, if possible, cause, and give remedy, if there is any? MRS. H. A. H.

Great Falls, Montana.

Answer:—Where strong, healthy and vigorous parents are used for breeders, and the proper attention is given to incubation the percentage of deformed and crippled chicks is very small. But we know of no way to prevent it entirely.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: At a fair held recently I noticed a gentleman taking particular notice of the feet of a hen. Has the web or the joints of the toes anything to do with its being full bred. F. S. Kaukauna, Wis.

Answer—Yes. The gentleman you speak of was probably looking for "stubs," or feathers, or other disqualifying points.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Kindly tell me in your question department the following: First—How long after mating your flock of pure bred poultry, where the whole lot has been allowed to run with other kinds, does it take to insure pure bred stock? Second—Would it be better to breed from two-year-old stock than it would from yearlings? Third—Would you recommend mating an older male with yearling pullets or use male bird of same

age? Fourth—Would two-year-old stock be apt to yield more fertile eggs than young stock? Fifth—My yards and buildings all face the north. Cannot be otherwise. Can I do successful work with poultry under these circumstances. North Creek, N. Y. G. H. A.

Answer—First—From twelve to twenty-one days. Second—For early hatching the two-year-old stock would be the best. Third—Would recommend using a two-year-old male with pullets. Fourth—Yes; in the early part of the season. Fifth—Yes, if proper care and attention is given.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Will you please answer the following in your next issue: First—How do the Indian Games compare with the Barred Plymouth Rocks as layers? Second—What is the standard weight of Indian Games? Third—Please give the name of some good breeder of Red Indian Games. M. H. H. South Milwaukee, Wis.

Answer—First—Very favorably. Second—Cock, 9 pounds; hen, 6½ pounds; cockerel, 7½ pounds; pullet, 5½ pounds. Third—You will find them in the advertising columns of this journal.

EDITOR AMERICAN POULTRY JOURNAL:

Dear Sir:—How many drakes ought I to keep with eight ducks, and how many ducks ought I to raise from eight ducks? I have a place to keep my ducklings, it is about a half an acre. How many pens can I have on that much land? How big must the pens be square, and how many ducklings can I keep to a pen? N. P. S. Pomona, Md.

Answer:—Four ducks to a drake is about the right proportion. With proper care and management you should raise about two hundred and fifty from eight

ducks, and this will probably be all you can handle on a half acre. Ducks are not like chickens—they do not crowd and therefore a large number can be raised together. One long house will be all that you will require and you can divide your place into as many yards as will suit your convenience, as 80 to 100 ducklings can be kept together.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer through your columns the following questions: I have a "hobby" of S. S. Hamburgs but cannot raise any. Other breeds I can raise plenty, but have no luck with Hamburgs. Are they so hard to raise or am I at fault? I treat them the same as other chicks. H. A. W. Chicago, Ill.

Answer—We are not aware that Hamburgs are any harder to raise than other varieties and are of the opinion that the fault is yours.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer in your next issue of your journal the following questions: First—A short time ago I sent for R. I. Red chickens and received a cock and a hen. They came by steamship and were two weeks on the way. They were confined in a box of about twenty inches long, one foot wide and fourteen inches high. When they arrived they had no feed or water. The water can was full of droppings. The hen had no feathers on her back to speak of; her back was red but not sore. I have had her about three weeks and there is no sign of feathers yet. She looks healthy otherwise and goes on the nest and cackles but lays no eggs. She is a year old. What is the cause of all this? Do you think it is caused by a disease? Second—The cock is about a year old, seems healthy enough and does

Many Women

depend largely upon their poultry for pocket money. They often double this pocket money by feeding green bone fresh cut. It will make their hens lay more eggs, make more fertile eggs, better hatches, earlier and heavier broilers and heavier market birds, because it is rich in protein and all other egg elements. Don't you want to make more pocket money this way? Just let us send you a

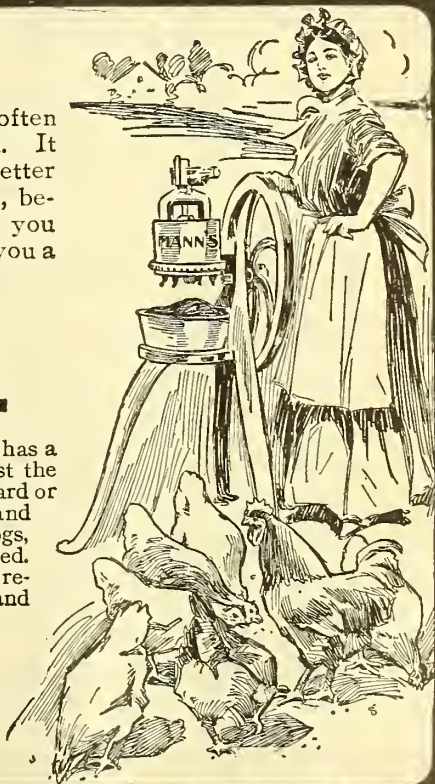

MANN'S Latest Model Bone Cutter.

Be sure and get a Mann's because Mann's is the Bone Cutter that has a patented self-governing feed that produces uniform pressure against the knives and adapts the cutting to your strength, whether the bone be hard or soft. Mann's is the one that cuts all the bone with the adhering meat and gristle into clean, fine food, without slivers or chunks and it never clogs, stalls or makes waste. Mann's has large open cylinder, easily cleaned. Mann's is durably built, will last practically a lifetime and requires few repairs. Don't you think Mann's is the Bone Cutter you want? Try one and prove it to yourself. No money in advance.

SENT ON 10 DAYS FREE TRIAL.

F. W. MANN CO., BOX 56, MILFORD, MASS.

service, but is in the habit of shaking his head now and then. Third—Would it be advisable to let three or four breeds run together out of the breeding season? Fourth—Salmon is plentiful here; would boiled salmon take the place of meat or would it do to feed the fish to them raw? Fifth—Where can I get sunflower seed to plant and what does it cost per bushel? How much does it take to plant an acre. C. R.

Catalla, Alaska.

Answer—First—By removing the male bird from the pen for a few weeks these feathers will come in all right this fall. Second—This is probably only a habit he has got into. Third—By removing all the male birds from the flocks the females of several varieties may be put together. The males should always be separated from the females after the

breeding season is over to give them a chance to get in shape for the next season. Fourth—Fish is good for poultry either cooked or raw, but care must be taken not to feed too much. Fifth—Sunflower seed can be obtained from any of the wholesale seed houses or from Eddy & Eddy, Mannheim, Ill. One bushel will plant about six acres and costs about \$3 per bushel.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Will you please answer a few questions in your journal? First—What is the cause of scaly legs and how is it cured? Would a hen with scaly legs be all right to exhibit by the last of November? Second—Will you please give me the addresses of buyers of crate-fed chickens? I wrote to a commission merchant but got no answer. Third—

How much sunflower seed and how often should it be fed to White Wyandottes? Decorah, Iowa. C. M. B.

Answer—First—Scaly leg is caused by a minute parasite burrowing beneath the scales, forcing them out from the leg by an accumulation of a white, crusty substance beneath them. Wash and clean the legs thoroughly with warm, soapy water, after which apply sulphur and lard, mixed into an ointment. A few applications is generally sufficient. If proper care is given the hen will be fit to exhibit by the last of November. Second—Consult the advertising columns of *Chicago Produce*, Chicago, Ill. Third—A small handful to each fowl twice a week is sufficient.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer in your next journal: 1. How big a coop should I have for a pen of White Cochins Bantams for winter quarters? 2. How many windows should I have and what size? 3. Is it better to have the door on the south side? 4. Does salt keep a white bird from turning yellow if fed in the mash feed? How much should be fed to a pen of Cochins Bantams? C. R.

Canton, Ohio.

Answer—A coop 6x8 will be plenty large enough. Second—One large one on the south side. Third—It does not matter. Fourth—No; a little salt once or twice a week may be given in the mash.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Will you kindly inform me in the next issue of your journal the following: Had a young pullet that was crop bound on grain. At first stood around with head drooped and crop down low; afterwards took to trembling and kept same up for about four or five hours and died. Can you give remedy to cure same or how to remove feed from crop? I bought some Barred Plymouth Rock eggs from a noted and reliable breeder and discovered when hatched that the legs were a dark color. Will they turn yellow when they become older? C. J. K.

Elkport, Iowa.

Answer—To relieve crop pour warm water down throat of bird, a small quantity at a time, and gently knead the crop with the fingers; then hold bird with head down and work the food out through the mouth. If taken in time a dose of sweet oil will very often do the work. The legs of a Barred Plymouth Rock should be yellow when hatched. They will not turn yellow with age; but, if anything, will become darker.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer following questions in your question and answer department: I have a stable 6 feet square, 6 feet high in front, 4½ feet high in back. Will a medium sized brooder using a No. 2 wick keep this stable warm enough in February and March? Brooder has no sun parlor. How much floor space would it require to raise enough chicks to have an output of twenty-five broilers a week? How many chicks would have to be hatched and how many eggs would have to be set? The broilers are to weigh 1½ pounds and the floor space to be considered outside of hover. W. K. S.

Lawndale, Pa.

Answer—A brooder with a No. 2 wick might keep it warm enough under the hover for the chick, but would not

PRIZE MONEY

FOR

Poultry People

To demonstrate, by a series of systematic tests, the very highest point of profit that can be reached by feeding "International Poultry Food," for increasing egg production, we have inaugurated a Prize Egg-Laying Contest.

We want to know just what results "International Poultry Food" will bring in the hands of the amateur and inexperienced as well as the expert poultryman. We want to know what even the girls and boys on the farm can do toward greater egg yields, and we propose to pay liberally for this information. We already have a great many complimentary letters from people who have fed "International Poultry Food"—some of them remarkable for results—but we want a great many more. So we have decided to offer cash prizes as an inducement to you to enter this great

INTERNATIONAL Egg-Laying Contest

and help us to ascertain, by these simple experiments, to what extent every hen owner can increase his egg production and also his egg profits by feeding "International Poultry Food." One extra egg a month will more than pay the cost of feeding our Poultry Food—all the rest of the increase is clear profit. Wouldn't you like to know just how much profit there is in feeding your hens right? We shall divide the contestants into two classes; one for boys and girls under 17 years of age—one for adults. This will give all an equal chance. Aside from the prizes offered much benefit will be derived; a good many more eggs will be laid than ordinarily, and a fund of valuable experience gained. The prizes will pay you well for your trouble—think of it

\$1.00 Cash Prize per Hen
\$100 Cash Prize for 100 Hens

300-Egg Hens

Fleetwood, Penn.
As a breeder of fancy fowls and as a user of your "International Poultry Food" I cannot praise it too highly. I claim it possible by feeding your excellent Food to produce the 300-egg hens and pullets.
Very respectfully,
W. S. KERN.

Prizes of \$5 for 5 hens; \$10 for 10 hens, and \$20 for 20 hens fed ought to interest the girls and boys; while \$25 for 25 hens; \$50 for 50 hens; \$75 for 75 hens, and \$100 for 100 hens will be just like finding money for the winners in the adult class. Space forbids full detailed account of the Contest, but all information, entry blank and book, "How to Help Your Hens," will be sent free on request. If you mention this paper we will also send free, postpaid, to each applicant for entry blank a beautiful 6 colored picture of the famous **Fishel \$500 Rooster**.

"International Poultry Food" is sold on our \$1.00 cash guarantee by over 100,000 dealers.

Write today and learn all about this contest. Make your hens lay more eggs and win one of these cash prizes for you. Address **Poultry Dept.**

International Stock Food Co.

Minneapolis, Minn., U. S. A.

Also Toronto, Can.

"INTERNATIONAL LOUSE KILLER"
WILL KEEP YOUR HENS FREE OF LICE

have much effect on the temperature outside of the brooder. To have an output of twenty-five broilers per week you would have to hatch this number or more each week and as they would be from six to eight weeks old when marketed it would be necessary for you to have from 150 to 200 chicks on hand all the time. This number would require at least 300 square feet of floor space. We cannot say how many eggs would be required, as that would all depend on fertility.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Am having a little trouble with eggs hatching in an incubator and ask advice through your "Question and Answer" department. I had ninety-six eggs ready to hatch August 5; about twelve hatched and the balance died in the shell. I dampened eggs well before hatching time. It was a hot water machine, so I thought there was enough moisture. I have had good success before with same machine. What was the trouble?

J. M. T.

Brazil, Ind.

Answer—In hot weather it is necessary to cool the eggs every day and to supply the needed moisture. Poor ventilation and lack of moisture was the trouble.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Will you please tell me in Question and Answer column why my B. P. R. pullets don't feather out on the head and neck? I have them four and five months old and not a sign of a feather or hair. Why do my little chicks turn blue and purple over the eyes and nose clog up? What is the cause and remedy? Will this year's chicks be all right to breed from next season.

J. H. T.

Great Falls, Mont.

Answer—A lack of feather-forming material is the cause. A little salt fed in the mash two or three times a week will start the feathers growing. Your little chicks have contracted a cold. Give them a little lard and kerosene oil and rub a little on their head and throat. This year's chicks will be all right to breed from next spring.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Kindly inform me in your next issue what the effect would be of using wood ashes to sprinkle dropping boards and for the dust bath. F. C.

Wibaux, Mont.

Answer:—Wood ashes has a very injurious effect upon the legs and plumage of fowls and we would not advise the use of same. Air-slacked lime mixed with road dust is better.

EDITOR AMERICAN POULTRY JOURNAL:

Dear Sir:—Please advise through your journal the cause of my chicks dying. They seem to be lively up to the sixth or seventh day; they then begin to droop for a day; then die. I feed the first week rolled oats; then after that cracked corn.

M. F.

Sugar Creek, O.

Answer:—Your method of feeding is entirely wrong. Start your chicks off with hard boiled eggs mixed with dry bread crumbs. After feeding this a few days start feeding steel cut oats, cracked wheat and a very little millet seed. This may be continued for three or four weeks, or whole wheat may be fed after they are two weeks old. Cracked corn should not be fed until they are about

2 IN 1

TRADE MARK You don't have to feed any other shell-making material when you use **Pearl Grit**. It grinds—it makes shell—it's a double purpose grit, guaranteed absolutely to take the place of shells and grit combined. It nourishes and renews the bodily organs and furnishes shell material at the same time the grinding process is going on. It makes strong, healthy, prolific fowls. This is why

PEARL GRIT

is the most economical grit for poultry. It combines all the essential qualities of shells and grit. Chemical analysis shows 60% Calcium Carbonate (lime), 14% Magnesium, besides Iron, Silicon, Aluminum Oxides and other shell-building, muscle-making, egg-forming and feather-growing material. **Pearl Grit** retains its sharp grinding qualities to the finest particle; strengthens the bones and sinews of young chicks; has no dust and no waste—a clean, sharp, nutritive grit. By using **Pearl Grit** you accomplish two objects at once. Get twice the results with half the labor and for one price. It's a money saver and a profit maker. Write for prices.

a month old, and then only once a day. Have grit and charcoal before them at all times. Keep your brooders clean and well ventilated and whitewashed and use plenty of lice remedies. To check bowel troubles give them boiled milk to drink and boiled rice to eat two or three times a week.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you please give a remedy for bowel trouble in chicks? The last two batches from my incubator have died from bowel trouble. Have been fed cracked corn, wheat and a mash made of corn and shorts occasionally. Their brooder is clean and dry and they are free from lice. C. G. G.

Girard, Kan.

You have fed too much corn and allowed your chicks to become chilled. To check bowel trouble give the chicks boiled milk to drink and feed them once or twice a day boiled rice, seasoned with cinnamon.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please tell me in your next issue the reason why my eggs did not hatch better. There were 110

chicks died in the shell. My first hatch came out fine. What was the cause of so many failing to hatch in the second lot?

Freedom, N. Y.

G. J. B.

Answer:—The climatic conditions were entirely different when you brought off your second hatch. The weather was much warmer and you should have cooled the eggs down oftener and longer, thereby giving the chicks more fresh air. There was in all probability a lack of moisture which should have been supplied. This can be ascertained by watching closely the development of the chicks within the shell.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Kindly answer in the JOURNAL under Questions and Answers the following: Have Buff Leghorns, White Leghorns and Plymouth Rocks; they are now all running together; in January I shall arrange separate houses for breeding and shall not set any eggs for a month after placing each kind by themselves. Will the mating of a Plymouth Rock cock with a Buff Leghorn hen now render the hen unfit for breeding pure Buff Leghorns in January, when mated with a pure Buff Leghorn cock?

Stock raisers object to scrub stock pairing with pure bred, even for but one time. Does it also apply to poultry?

N. C. W.

Sonora, Mex.

This is a question that is frequently asked and one that is most difficult to answer. Some breeders claim that if a pullet is allowed to mate with a male of another variety that she will throw off colored chicks as long as she is used for breeding purposes, but will not have this effect on a mature female. But whether this is a fact or not we are unable to say. Where it is necessary to let several varieties run together we always advocate the removal of all the male birds, and thus avoid all possible chance of a mixture of blood.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please answer a few questions in your next journal. I had a White Minorca cockerel, very highly scored, when he was in his best shape. He began to get thin; I noticed his comb became dark; at last he would not eat, and when I would lift him up blood would run from his mouth. I killed the bird and upon opening him

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. Stock for sale. Eggs for Hatching \$2.00 per 15, \$3.75 per 30, \$5.00 per 45, \$10.00 per 100. From winners pen \$3.00 per 15, \$5.00 per 30. Illustrated circular free

Another Important Poultry Problem Solved.

SHADE!

SHADE!

SHADE!

If you want to succeed you must provide **shade** for your fowls. We have discovered a tree that seems better for this purpose than any other, and ask your consideration of the following points:

The cut herewith is a photograph from life. This tree was planted as a seedling four years ago. See the rapid and healthy growth. Its foliage measures 18 feet in width by 22 feet in height. Foliage is heavy and makes a dense shade, a protection from rain as well as from hawks. It responds readily to pruning and will grow as you shape it—tall or short, wide, flat or round, just as your fancy chooses, and is extremely ornamental as well as useful.

To live and make rapid growth fowls must have shade. White birds will get brassy without it and the plumage of dark colored birds will fade and tarnish if compelled to live in shadeless yards. We have trees like this growing in all our yards; some trimmed up from the bottom like cut, others trained to the ground so that the birds can get in under and have complete protection from storm, sun and hawks. The illustration shows more eloquently than words can how the poultry enjoy it.

We have a limited supply, about 2500 trees, in different sizes that you can get while they last at the following low prices, F. O. B. our farm in lots of six or more.

4 feet high	each	\$.50
5 " "	"	.75
6 " "	"	1.00
7 and 8 feet high	"	1.50
10 and 12 feet high	"	2.00

Special prices will be made for large lots

EDDY & EDDY, White Rock Poultry Farm, Manheim, Ill.

found three large solid growths which had very nearly filled his insides. They were of a white substance with bloodlike substance running through them. They looked to me like tumors. What would you call them?

Now I have five hens of the same strain and they have sore feet; they started with a scab on the bottom of the feet; then they would puff up and fill with blood and matter. What is the cause? The roosts are only about 18 inches from the floor and they have a good dry coop. Can you tell me what is the cause and would their eggs be good to use? They are all laying and have been since February. C. W. O.

Zion City, Ill.

Answer:—Your cockerel had tumors. Fowls are subject to these the same as the human race. It does not pay to doctor. The hens are afflicted with what is known as bumble foot. The foot should be soaked in warm water and then lanced and the blood and pus removed, after which apply carbolated vaseline. Keep the birds in a small coop for a few days where they will be unable to move around very much. We don't believe this will affect the eggs.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Would you please answer the following question in the next issue of your journal: What is the best time to hatch in spring to have pullets for winter layers and not too early so as to have them molt in the fall? I know when they are hatched too early they molt the same as the old hens and that

is a disadvantage to them as winter layers—that is in the early part of the winter.

Mrs. A. W. R.

Norman, Okla.

Answer:—Pullets hatched last of April or first of May will make good winter layers.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please tell me how to cure clover so as to have it for a food in the winter for my hens.

East Weave, N. H.

C. B. H.

Answer:—The second crop of clover makes the best feed for hens. This should be cut and cured in the shade if possible, as the sun bleaches it too much. After becoming thoroughly dry it can be stored away for use during the winter.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—My chicks, which were hatched in March, are dying. Can you tell me the trouble and cure in your Question and Answer Department.

First symptoms are pale heads; as disease progresses they become weak, with some diarrhea.

Droppings, when very weak, are whitish instead of green, as I believe is the case in cholera. The eyes are very dim; they seem almost blind, but will eat till almost dead. Have no lice. Live as much as a week after they are very sick and weak and two or three weeks from time they first look pale.

Lanark, Ill.

E. H.

Answer:—Every symptom points to lice and we believe if you will examine more closely you will find them. Give

them boiled milk to drink and feed them boiled rice, seasoned with cinnamon, once a day. Keep them in the shade during hot weather and give them plenty of ventilation in their roosting coops.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer in your next issue of AMERICAN POULTRY JOURNAL the following questions:

1. How long will it take for a hen to lay fertile eggs after she is put with the male bird?
2. What is marketing weight for Plymouth Rock hens?
3. What kind of sale stock is Black Langshans, and do they lay well?

P. J. S.

Answer:—From five days to two weeks. 2. From six to eight pounds. 3. The Langshans are considered a good fowl both for market and eggs.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer in Question Department of the JOURNAL:

Can light Brahmas be hatched in August and attain standard size as well as March or April hatched chicks? About what time the following year would they mature? About what size and weight should Barred Rocks be when four months old?

E. O. C.

Columbus, Ga.

Answer:—Light Brahmas do not mature as rapidly as some of the lighter breeds; but under proper conditions should lay at about eight months. Barred Plymouth rocks should weigh from 3 to 3½ lbs. at four months old.

\$1.50 and What it Will Do

ORDER NOW

The New Standard of Perfection, which will soon be issued by American Poultry Association, is in such demand that the sooner you get your order in the better chance you stand of getting one of the first editions. The Standard is a necessity to every poultryman. It is the authority which judges go by at the poultry shows. It describes every standard variety, giving the correct shape, size, color, etc., that a perfect bird should be. With a copy of this book you can judge your own fowls. It enables you to know your best birds, which to take to shows, which to mate for best results. The book will contain over 300 pages with nearly 100 illustrations. The price of it made by the American Poultry Association is \$1.50.

But the Special Offers of

American Poultry Journal

Classified Ads.

Under this heading ads will be inserted for five cents per word each month for less than three months, **three cents per word for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. Commencing with the January, 1904 issue, all ads will be inserted under **classified headings.** No ads accepted at less than an average of 30 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. **AMERICAN POULTRY JOURNAL** is furnished every advertiser during the time his ad is running. **Forty thousand per month.** We guarantee an average monthly circulation of 40,000 copies of **AMERICAN POULTRY JOURNAL.** When placing your ads remember that advertisers of Classified Ads get better returns from **AMERICAN POULTRY JOURNAL** than from any other poultry journal—none excepted.

On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

Wyckoff's S. C. White Leghorns

Acknowledged everywhere the world's greatest laying strain; unequaled in standard qualities. Without question the most profitable strain of poultry in America today. 1000 extra choice yearling hens mated with grand, strong, early hatched cockerels must be sold at once to make room. They are the ideal breeding matings for season of 1906, and we will make special inducements in prices to early purchasers. When writing for prices and catalogue please state plainly just what is wanted. Address

WYCKOFF'S FARM,

Aurora, Gayuga Co., N. Y.

"MONEY in POULTRY."

Our new 84-page book for 1905 tells how to make it; also how to breed, feed, grow and market your poultry for best results. This book probably gives more reliable information about the poultry business, obtained from actual experience on the largest farm in America devoted exclusively to the rearing of pure-bred poultry, than any other book published. Describes and illustrates 23 varieties of our pure-bred fowls. Quotes extremely low prices on stock, eggs, incubators and brooders. Mailed for 4c in stamps.

FRANK FOY, Box 50, DES MOINES, IOWA.

\$300

If you are looking for a brooder that is a success from the start, that will enable you to have enough of them to properly care for your chicks, and will not cramp your purse, that is easy to clean, and one that applies the heat direct to the backs of the chicks. Send for free catalogue to the

PERFECT BROODER SHOP

CELORON, NEW YORK

System in Poultry Practice

BY JAMES SHACKLETON.

30 Chapters, 147 Pages, One Dollar, Postpaid.

May 1, 1905. Sales of this book since Sep. 1, 1904—eight months—are larger than for preceding 18 months. It is meant to appeal to common sense and evidently succeeds, for increase is chiefly in places where it has gone before. California always took more than any other state, and now takes more than any other three. Canada has many and now takes more than any state but California. Even Australia takes many. This book has been sold in every state of the Union, except two southern states, and Alaska. In Canada, Newfoundland, P. E. Island, New Brunswick, Nova Scotia, Quebec, Ontario, Manitoba, Assiniboia, Alberta, British Columbia and Vancouver Island. In Cuba, Hawaii, Philippines. In England, Belgium, Germany, Australia, New Zealand and China. It is meant to be of equal value in every climate, for whatever purpose fowls are kept, and evidently is so regarded. Sales are increasing rapidly everywhere. Enthusiastic testimonials are plentiful.

The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON,

Box A 12, Milburn, New Jersey

HOUDANS!

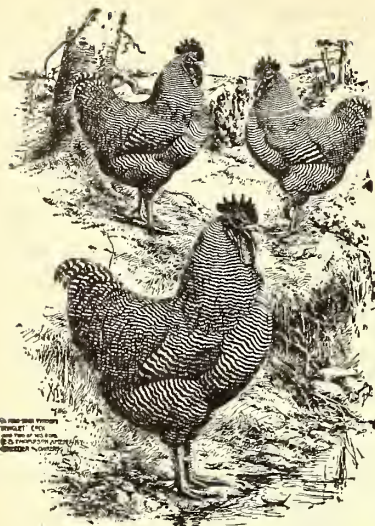

Rigg's HOUDANS have been line-bred since 1874. It is a thoroughly established strain, unapproached in size, style and finish. Acknowledged by all breeders to be the standard of Houdan excellence in America. Large of size, extremely vigorous and wonderful egg producers. Have won more prizes in the show room than all other strains combined. Exhibition and breeding stock at prices representing their value. A positive guarantee given in each case.

WHITE WYANDOTTES

The demand for White Wyandottes has been so heavy that at this early date we are sold out of surplus stock. The breeding stock we have retained for the coming season are White Wyandottes as White Wyandottes should be.

THOS. F. RIGG

IOWA FALLS, IOWA

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation, Madison Square Garden, New York, January, 1903.

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

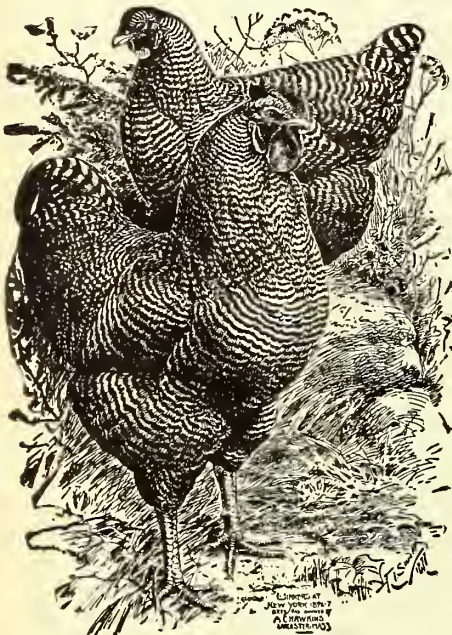

The "Ringlet" cleans sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 87 prizes. 36 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

A "Ringlet" 1st Prize New York Cock and two of his Sons.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36 page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

We Can Teach You How to

RAISE POULTRY PROFITABLY

If your poultry isn't paying as it should, you are making costly mistakes. Our course of Instruction will quickly teach you how to make any yard (large or small) pay from 25 per cent to 50 per cent profit. Your knowledge and ours combined will make you successful. The individual home lessons, delivered regularly at your very door, are prepared by practical poultrymen who have by actual experience mastered the problems which worry nine-tenths of all poultry raisers. You get no theoretic instruction. After a little study you can discover your errors and overcome them. The directions are easy to understand and follow, and big paying results are sure. If you want to qualify yourself as manager of a poultry yard and accept one of the

MANY LUCRATIVE POSITIONS

we have on our records, our Course of Instruction will soon make it possible. Poultry Culture is not drudgery when rightly conducted. It is a healthful, profitable, enjoyable vocation for man or woman. Write for interesting free literature at once. Ask for circular showing some of the good paying positions we have open for competent men.

MRS. T. F. LEONARD

Box 60, Mt. Sterling, Ohio

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.
BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's. Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

REV. C. E. PETERSEN,

Pres. Houdan Club, Drawer 12, Franklin, Maine

World's Fair Winners

at the largest poultry show ever held, with the strongest class of Buffs ever brought together, we won seven out of a possible ten firsts. This duplicates our Chicago record, where for four years we have won more firsts than all competitors combined. Circular free.

**The Dandy****Green Bone CUTTER**

is sold on 15 days' trial. If you don't find it thoroughly satisfactory in every way, you needn't keep it.

**The Dandy****Green Bone CUTTER**

will pay for itself twice over in a single season. Poultry raisers say it's the best investment they ever made.

IF YOU WANT MORE MONEY

from your hens, it will pay you to send for our new common sense poultry book, telling how to save feed bills and increase the egg crop. The DANDY does it. It's the bone cutter that doesn't break, doesn't wear out and doesn't tire the person who uses it. Automatic feed, special cutting knives, large bone box, safety clutch and everything that makes the machine effective. Remember we sell it on 15 Days' Trial. Price \$5 up. Send for our proposition.

No Money in Advance.

Stratton Mfg. Co.
Box 17,
Erie, Pa.

CAST AND STEEL POULTRY TROUGHS

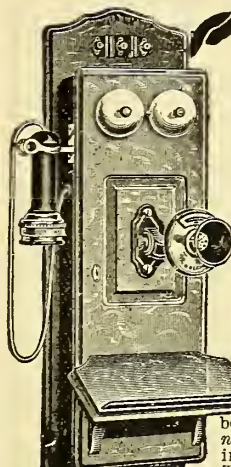

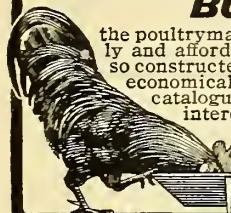

In raising poultry successfully much depends upon the cleanly and sanitary conditions of the feeding and drinking receptacles. More diseases arise from using unsanitary feeding troughs and impure water than from any other causes. In

BUCH'S Cast and Steel TROUGHS

the poultryman finds just what he needs—a trough that will last indefinitely and afford absolute sanitary conditions. Easy to keep clean and so constructed that ice cannot freeze fast in it. Most satisfactory and economical poultry trough made. Suppose you send for our catalogue No. 2; it's free; gives prices and will surely interest you, and may save you a lot of money.

A. Buch's Sons Co., Box 100, Elizabethtown, Pa.

A Telephone for the Country Home

The telephone in the country home is not a luxury—it's a money-saving investment that brings returns every day. Keeps the farmer's family in close relation with the neighbors, saves many a trip to town, and helps to make the young folks satisfied with the farm by giving them advantages like their city cousins.

Stromberg-Carlson Telephones

Are the right telephones for country homes. They work right, stay right, and the price is right. Our new book 81-E, "How the Telephone Helps the Farmer," illustrates and describes how our telephones are made—explains why they are the best to buy. Farmers are building lines all over the land. Why not you? The book shows how cheaply it can be done. If you are interested we will send you a book telling "How to Build a Rural Telephone Line," and how to maintain it after it is built. Both books are free. Write nearest office for them today. Address

A FISHEL WORLD'S FAIR WINNER

Better this Season than Ever

I am pleased to say the results from my matings this season are better than ever. It is gratifying to know that when you offer your customers fowls you are offering them birds they can get results from. Not only are the Fishel birds winning in the hands of my customers the world over, but

Fishel's White Ply. Rocks

at ILLINOIS STATE FAIR, Sept. 30 to Oct. 7, 1905, made a record unequalled in history of poultry breeding; viz., winning first, second and third prize cock; first, second and third prize hen; first, second and third prize cockerel; first, second and third prize pullet; first, second and third prize breeding pen. Also the most coveted of all, SPECIAL PRIZE for BEST HEN in AMERICAN CLASS, winning over birds that had won at many other fall shows. 134 White Rocks in this show. How was that for a CLEAN SWEEP? If you had any doubt as to the Fishel White Rocks being

The Best in The World

that doubt is surely removed now after this winning. Our previous winnings of seventeen PRIZES at ST. LOUIS WORLD'S FAIR and also the leading prizes at all the leading shows the world over you may say, were never equaled by any White Plymouth Rock breeder. If you want the most beautiful and profitable of all fowls, try the Fishel White Plymouth Rocks.

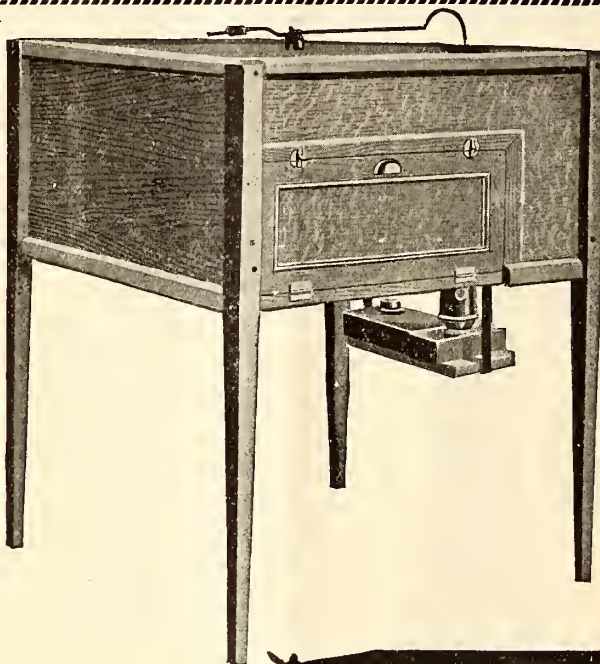

Send three 2-cent stamps for 48-PAGE CATALOGUE, the most elaborate Poultry Catalogue ever issued. If in need of EXHIBITION BIRDS that will win, SELECTED BREEDERS that will breed you winners, or UTILITY FLOCKS that will make you money, write me, please. I have something like eight thousand birds to select from. May I hear from you?

U. R. FISHEL

Box A, Hope, Ind.

The Natural Incubator Will Work Wonders For You.

Other incubators differ but slightly. They all have great losses. They are proceeding on a wrong principle. The real, necessary and vital point of air conditions is where they all fail and cannot hatch chicks with the constitution necessary to bring them to maturity. With all the talk about "self-regulating and self-ventilating" they are cooking the air; the dry, hot heat is taking the natural moisture from the eggs which is so necessary for the hatching of healthy, vigorous chicks. On this necessary principle of natural air conditions is where the Natural Incubator differs from all others. It has set a new mark in uniform high hatches, as thousands are testifying. Its chicks do not die in the shell, nor are they hatched so weak they cannot live. Air is the life of the chick. Just as much air as heat must go into the incubator. The Natural Incubator is the only machine that combines these two in the same way that the hen herself does; the only machine that disperses, like a hen, the foul gases and odors that arise from the eggs during incubation. Not only in this vital matter, but in other important particulars, it differs from ordinary incubators. It is the only incubator made of paper, the outer wall thick and heavy, with hard, smooth finish, practically a non-conductor of heat and cold; less than half weight of lumber, equally strong and more durable. It is heated with improved compound heater. No fumes, gas, soot or smoke can get into the egg chamber. It brings incubator to proper heat in two hours in coldest weather. A variation of 30 to 40 degrees in outside temperature has practically no effect on temperature inside of machine. No incubator cellar necessary. Its 5-inch wafer regulator is most sensitive, and has much more expansive power than any other now in use, and automatically regulates heat of egg chamber. No vents or slides to require careful watching with every slight variation in temperature. No moisture pans used. These are but a few hints as to qualities which are making the Natural the foremost incubating machine in the world. We can only give hints here. Our

book explains everything to everybody's satisfaction. Send for it. It is free.

We also make the Natural (Storm-King) Brooders, which are operated on the same principle as are the incubators and which unquestionably raise a larger percentage of chicks than any other brooders now in use. Or, we will furnish the fixtures with blue print, showing how they may be used in almost any brooder now on the market, saving considerable expense. This has been done in thousands of cases. Send for our catalog and read customers' reports of wonderful results obtained by use of both Incubator and Brooder. We pay freight to all points east of Mississippi river. Also freight to the Mississippi on shipments west of that. Write for catalog. Now is the time to begin for mid-winter broilers.

Do You Want One?

A pair, a trio or breeding pen bred from our St. Louis and Chicago prize winners. We can furnish stock in both Partridge and Silver Pencilled Wyandottes of the highest quality. They are line-bred, fine, healthy, vigorous prize winners. If you want the best at a reasonable price write

Carver & Avey Box A, Columbia City, Ind.

IT IS YOUR LOSS!

and a real one if you do not look up

Duston's White Wyandottes

The most popular breed and acknowledged the most popular strain in the world. Don't be misled by high sounding talk, but come direct to headquarters for what you need. Send 2-cent stamp for the catalogue which tells the story.

Arthur G. Duston, Box 1020, S. Framingham, Mass

White Wyandottes.

Mapleside Strain

For the past ten years have proven themselves to be winners, breeders and layers. Exhibited at Madison Square Garden, Newark, N. J., etc., with grand success. Large, heavy, pure white specimens, either sex, for sale. Vigorous, breeding males \$2 up. Write today for booklet and save money.

CHAS. NIXON, Prop.
Box 202 Washington, N. J.

SPECIAL COCKEREL SALE!

Closing out my Barred Rocks, Bradley Bros. Strain, bred for males. Choice cockerels and a few dark females. White Wyandotte cockerels bred from chalk white stock. My stock has won prizes at Chicago, Minneapolis, Naperville and Downers Grove. My prices are from \$2.00 up. You will be pleased with my stock.

1.50 and What it Will Do

ORDER NOW

The New Standard of Perfection, which will soon be issued by American Poultry Association, is in such demand that the sooner you get your order in the better chance you stand of getting one of the first editions. The Standard is a necessity to every poultryman. It is the authority which judges go by at the poultry shows. It describes every standard variety, giving the correct shape, size, color, etc., that a perfect bird should be. With a copy of this book you can judge your own fowls. It enables you to know your best birds, which to take to shows, which to mate for best results. The book will contain over 300 pages with nearly 100 illustrations. The price of it made by the American Poultry Association is \$1.50.

But the Special Offers of

American Poultry Journal

Help you get the New Standard cheaper

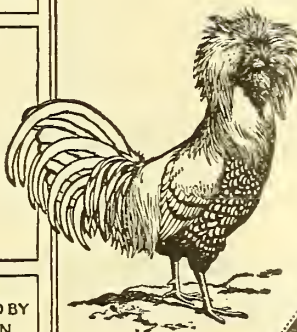

- 1.—Send us One New Subscription to the American Poultry Journal at its regular price of 50 cents a year and we will let you have **The New Standard for \$1** instead of \$1.50.
- 2.—OR—Send us Two New Subscriptions at 50 cents each, and you can have **The Standard for 85 cents** instead of \$1.50.
- 3.—OR—Send us Three New Subscriptions at 50 cents each, and you can have **The Standard for 75 cents** instead of \$1.50.
- 4.—OR—Send us Four New Subscriptions at 50 cents each, and you can have **The Standard for 50 cents** instead of \$1.50.
- 5.—OR—Send us Five New Subscriptions at 50 cents each, and you can have **The Standard for 25 cents** instead of \$1.50. 6.—OR—Send us Six New Subscriptions at 50 cents each, and **WE WILL GIVE YOU THE STANDARD FREE.** Address

RULES TO BE OBSERVED IN GETTING THE HIGHEST PERCENTAGE OF FERTILE EGGS

Hints on Housing, Feed, Care, Selection and Mating to Secure the Highest Percentage of Fertility.

First Prize Article in Our \$50 Prize Contest.

Written by L. Watson, M. D., Chesaning, Mich.

In writing on this subject I do so for the benefit of those who are just beginning the breeding of fancy poultry or perhaps launching forth in the market poultry business, and who have been or may be disappointed with their early hatches, either under hens or in incubators. The first thing in connection with the production of fertile eggs is the housing of the breeding stock.

The house should be well lighted, well ventilated and dry, no draughts, not necessarily too warm, with roosting quarters made snug and warm, with curtain to let down on excessively cold nights and retain body heat of fowls. Floor space of eight feet to each hen; earth floor is best. Nests under dropping boards or on ground, so that fowls do not have to jump up or down getting in or out of them. Provide plenty of nests so that hens do not have to crowd one another in the nest, thereby breaking the eggs, and this often is the commencement of the egg eating habit.

Dust baths should be placed in front of a south window and kept filled with road dust, which you should put away in barrels this fall to have for next winter's use. Nothing gives the fowls more enjoyment in the cold days of winter than this, and it is beneficial and necessary to their good health. A little sulphur and ground tobacco may be added occasionally. Boxes of grit and charcoal should be placed within reach; green bone and beef scraps may be fed in this way if desired. Drinking vessels should also be in the house proper. On the south side of the building should be erected a shed with whole south front open, except on cold, stormy days, when a canvas curtain may be let down to exclude snow or rain. This cover should be kept covered at least one foot deep with clover chaff or cut clover or straw. Clover is the best and must always be provided in winter. Buildings must be so arranged that the outside door may be left open every day without causing a draught. Perfect airing out of the house on the coldest days, if only for a few minutes, is necessary. Of course if wind is going to drive snow or rain into the house it should be dispensed with, but under no other consideration should this be omitted, as fowls require fresh air and plenty of it to keep them in condition, and I would rather have a house in which water would freeze in zero weather and dry than a warm house with damp covered walls when opened up in the morning. Keep dropping boards regularly cleaned and sprinkled with air-slaked lime, floor well swept, and we are now ready to select our breeding pen to occupy the quarters.

Study matings carefully. If male is defective in some particular, mate him with hens or pullets strong in that section. If you are a beginner or are not familiar with the requirements of the particular breed you now have, study your Standard, or, still better, have some reliable breeder mate your pens for you, and ask him as to why he does this, that or the other in mating. By this means you will gain valuable information on which to base future operations.

In selecting a breeding pen the male, of course, comes first; and always remember he is half your pen. After the Standard requirements have been fulfilled as to the particular

breed, see that the cock has bright red comb and wattles, bright eyes, erect carriage and elastic step, and is vigorous and active, and up to full size and weight of his breed. These points denote general robustness and health, and this is the very keystone of successful production of fertile eggs, as fertility is only assured from fowls in the pink of condition.

A two-year-old cock with pullets of full twelve months old may be allowed if the pullets are fully developed and have not been laying too long. If they have been laying since early fall the eggs will likely be of low vitality. A two-year cock with yearling hens makes the best mating for the production of vigorous, healthy chicks. Cockerels with yearling hens may be used with very fair success, but the best of all is the two-year-old cock with hens past one year. Now as to the number of hens allowed to a cock to ensure best results, mate as follows: Leghorns, Minorcas, etc., 15 to 20 females to one male; American class, Rocks, Wyandottes, etc., 10 to 15; Cochins, Brahmas, etc., 8 to 10. Of course much depends upon the individual male; one vigorous, active, prepotent male will give greater fertility than three or four sluggish, effeminate males. This will have to be studied in making up your pen. Where it is desirable to use two cocks to a pen it is better to allow only one of the birds at a time with the flock. The other one should be kept in a coop with plenty of water, grit and feed, being sure to supply plenty of meat in the ration.

This brings us to the matter of feeding the stock. That there is a difference between hens that are well and properly fed and those that are improperly fed, as is shown in fertility, strength of germs and vitality of chickens, none can deny. The chemist may not as yet have found its composition, but the difference exists just the same. Hens that are closely confined to limited quarters, where they do not get the necessary amount of sunshine, fresh air and exercise, even though well fed, are almost certain to produce eggs low in fertility and weak in vitality. Over-fat hens and very poor hens, if they lay at all, are sure to produce infertile eggs. To get fertile eggs we must get as near the hen's natural ration when allowed free range in summer, hence we must have variety of grains, green food in some form, meat to supply the place of the bugs and insects obtained when they have free range in summer, cut green bone and grit to aid digestion, charcoal as a corrective. In winter feeding I prefer in early morning a light feed of mash composed of ground oats, 15 pounds; ground corn, 25 pounds; bran, 5 pounds; ground barley, 10 pounds; linseed meal, about 2 pounds; thoroughly mix and moisten with warm water or milk, and mix thoroughly so that it will crumble up. Never feed sloppy feed to any kind of fowls. Feed this warm in winter; twice a week add a teaspoonful of salt for each twenty-four hens, and twice a week feed in the mash one-half ounce per hen of beef scraps; make this feed light so that they will still look for more. Now take your grain and throw in the litter in the scratching shed and thoroughly fork the litter over with a pitchfork; it only takes a few minutes, and the fowls have their day's work ahead of them.

About twice a week, at noon, I hang up a cabbage or mangel wurtzel cut in half lengthwise, just high enough so the fowls have to jump to get a morsel. This they enjoy very much, and if plenty of litter is kept under them is in no way injurious; otherwise on hard, bare floors they may injure their feet if of the heavier varieties.

At night I feed a full feed of either wheat, corn or oats, seeing that crops are well filled, for the fowls in winter spend nearly half their time on the roost, hence need the heaviest meal before going to roost; otherwise they are hungry before daylight.

Clover in some form must be supplied once or twice a week. I find a very nice way of feeding is to take a quantity of clover finely cut, put it in a large pail or tub having a tight-fitting cover, pour boiling water over it just before retiring for the night, cover tightly, and in the morning add ground feed enough to mix it up nicely. The fowls are very fond of it and eat it greedily, and the clover supplies the lime salts needed by fowls in confinement.

Table scraps should always be saved in the kitchen and added to the morning mash. Feed no condiments; feed at regular hours; give as much variety as you can, and see that each week the hens have mash, grains, meat, green food, cut bone, grit and charcoal, and also that they have to work to get it; and the eggs will prove highly fertile from the healthy stock with which we started.

Ventilation must be looked carefully after, as fresh air is another essential to health, and every day, no matter how

cold, have the door of the poultry house open for ten or fifteen minutes to thoroughly air it out. See to it that there are no draughts.

Now comes the care of the eggs, and right here is where a great deal of the trouble arises which causes poor hatches which are charged to the hen when in reality it was the fault of the person handling the eggs. In cold weather gather the eggs often in order that they do not get chilled. Keeping eggs lowers their vitality. If kept at too low a temperature the chilling injures them; if, on the other hand, the temperature is too warm, development begins. Just the proper temperature to hold the eggs at intended for hatching is not known, that generally recognized as best being between 55 and 65 degrees Fahrenheit. If kept in too dry a room eggs evaporate moisture very rapidly. They should, therefore, not be exposed to a direct draught of air. They should be turned daily in order to prevent the yolks adhering to the shell, in which case the vitalline membrane may become ruptured when eggs are turned. Eggs should prove fertile and may be saved for hatching four days after the male has been placed in the breeding pen. Most writers claiming that the second egg after copulation takes place is fertile.

In conclusion the features governing the production of fertile eggs are perfectly healthy and well developed breeding stock, variety in feed, plenty of fresh air, sunshine and exercise, care of eggs between time of being laid and matching.

L. WATSON, M. D.

Chesaning, Mich.

THE PROCESS OF MOLTING.

Care of the Fowls During this Period. What to Feed and Why We Feed it. Is Delicate Color and Gloss of Plumage Affected by Foods.

Second Prize Article in our \$50 Prize Contest.

Written by A. V. Meersch, Poughkeepsie, N. Y.

With the older fowls beginning to look ragged, and loose feathers becoming plentiful in the houses and runs, the poultry yard will be less attractive than at any other time of the year. The egg basket in addition will show a considerable falling off, many of the hens having ceased to lay. But to make poultry profitable the birds should have plenty of care during that period as well as attention bestowed upon them, so as to get them through the strain of moulting as soon and with as little damage as possible. Fowls that have their liberty and are well fed usually go through this period without much difficulty. Those that pass the night in warm houses will generally begin to moult sooner than those that roost in cool, open houses or on trees.

Special care should be taken that the birds have access to shelter during rainy days, as a thorough soaking when they are nearly bare of feathers is apt to result in an attack of roup or causing a chill, the effect of which will last for many months. Fowls that are confined in small places and diminutive runs should have plenty of green food during that time, lettuces that are running into seed being as good as anything for these purposes. Some Epsom salts will be found beneficial twice a week in their drinking water, as much as will make the water taste slightly. A little flower of sulphur mixed with the soft food and given in the proportion of a teaspoonful to every three fowls two or three times a week on dry days will help the new feathers to grow, and it will be most surprising to find what great benefit that sulphur does to lustre of dark colored fowls, especially blacks. It is of no use to place a piece of stick sulphur in the drinking vessels, as so many do, for sulphur is perfectly insoluble in water.

The cocks should always be separated from all hens while the moulting is in progress. They are often fierce and spiteful when changing their feathers, especially ill-treating some of the hens at feeding time. They will do well in very small quarters for a time if kept clean, fed well and allowed some grit. Exhibition baskets are sometimes used by some fanciers to keep the cock birds in at that time, a run of a couple of hours during the day being all the liberty they have allotted to them. Small and warm surroundings such as these promote and quicken the moult, which is a longer business for the cocks than for the hens, owing to the time the sickle and tail feathers require to grow.

Any birds that are likely to be required for show purposes must be kept out of the hot sunshine, or they will become tinged and sunburnt. Old hens that are to be gotten rid of and which are intended to kill for the table should be disposed of just as they begin to shed their feathers. It is not always easy to tell from the appearance of a hen

as she runs about whether she has begun to moult or not. Some hens will stop laying and will hardly eat anything at all for a few days and yet not shed any feathers, till they suddenly appear almost bare. They will loose flesh most rapidly during the interval after they have lost their appetite. If a visit is paid to the henhouse just after they have retired to roost, those that are still laying will be found with their crops full, while those that have stopped laying will have but little food in them. No great mistake, therefore, can be made if those hens that are on the perch at that time with empty crops are selected for killing as early as possible. The poultry house should be kept clean, or the accumulation of loose feathers in the corners will tend to the increase of insect vermin.

If the comfort of the hens is well attended to during the moult they will pass through it with unimpaired health and eggs will be plentiful afterwards, when they are most valuable.

Poultry are particularly sensitive to atmospheric changes when they are moulting. The house in which they roost must be water tight, and they should have shelter to which they can retreat when there is wind, and rain as well. To some extent the moult can be hastened, and this is taken advantage of by those breeders of certain fowls for exhibition at the early fall shows. They place those birds needed for this purpose in warmly sheltered houses so that the increased temperature will cause them to shed their feathers quickly and hence hasten the moult. If the hens are of an incubating breed and it is wished that they should moult early, this can be brought about by allowing them, when they become broody, to sit for ten days or so on a china egg and then removing them to a small confined pen. This will cause them to drop their feathers all at once almost and quickly grow their new plumage.

Though an early moult is generally easier for the fowls and takes less time, it may be advisable to keep the hens in full lay as long as possible, so that the pullets may commence to contribute to the egg basket when the older birds leave off. To defer the moult the hens should roost nightly in a cool place; the door of the house should be kept open day and night, of course, avoiding draught.

The food whilst the change of plumage is proceeding should not be of too heating a nature. Spices and stimulants are not at all required at this time. The diet should include plenty of green vegetables, and in mixing sulphur with the soft food due regard should be taken that sulphur has a most laxative effect on all fowls. Some fowls, when the moult first begins, will not eat at all and appear very seedy

and ill. They are inclined to remain on the perch; so it is as well to look into the house when the birds are fed in the morning and bring out any that are unwilling to come out themselves. As a rule the non-sitting breeds feel the moult more severely than the sitters.

The time for moulting is usually from June to November, sometimes extending well into the winter; but the moulting period is not the same with all hens, or does a single hen

WHITE WYANDOTTE MALE.

Owned and Bred by George W. Brown, Camden, Ark.

begin at the same period every year, but usually a month sooner or a month later. For instance, a hen beginning to moult in June may not begin the following year until July, and such a hen will moult later every year until her moulting period reaches into the winter, if such a hen be allowed to live over her usual laying period. The hens that begin to moult early are those that finish their moulting and are ready for laying again before winter commences. Having then completed their growth of feathers they are in excellent condition for doing service; but should the process of moulting extend into the winter the hens that have not finished will probably not lay until spring next. Consequently the matter of moulting is one which all who are interested in fowls must consider.

The moulting process really requires three months, and as the production of feathers requires a large proportion of nitrogen and mineral elements, it becomes necessary to supply the fowls with something more than grains and grass. Carbonaceous food exclusively is detrimental to the moult, as the hen is inconvenienced by the fat stored on her body rather than benefited by it, and the majority of poultrymen feed liberally upon grain their moulting hens, in the belief that such a food is the best that can be given to them. The food should consist principally of ground meat or cut green bone that has a fair proportion of meat hanging to it, but all fat to be avoided. A mash composed of bran and mashed potatoes will provide an agreeable change, while ground bone, milk and a little powdered sulphur in the food two or three times a week will be found very beneficial. All hens not yet having commenced to moult will prove poor layers before Christmas, and if such hens are fat they should be disposed of soon. It is a well known fact that if a hen or pullet does not begin to lay before cold weather sets in she will perhaps not begin to lay before the early spring, but if she starts to lay before the winter begins she will continue to lay for a long time or until she becomes broody perhaps if of an incubating variety of fowl.

Pullets hatched the former spring will not begin to moult until the following year as a rule, as only the hens will moult in summer, but a pullet that was hatched very early in the year, about January or February, may moult, although the chances are that she will not do so until next year.

Clean, dry quarters should be provided for the hens that are moulting and lice must be kept down, as the hens that are moulting will quickly succumb to lice, owing to the debilitating effects of the process. As to the males, they should have been sold off long ago, as it does not pay to keep one that is moulting, unless such male possesses some characteristic that is sought for, and the sooner all other males are sent to market or killed for sale or home use, the higher prices they will bring.

Moulting is certainly a very trying experience for fowls to go through year after year if they are allowed to live without being killed off and to have them come through with a new suit of plumage and be in good laying condition is the problem with which every poultry raiser has to deal. The easiest and most profitable way after all of caring for fowls during this period is to try and get them to moult as early as possible. We say easiest because the fowl that is slow in moulting is in bad health; then this critical period should be shortened and hastened as much as possible. One of the easiest and best methods ever put into practice for hastening the moulting season is to feed the fowls with all the sunflower seed they will eat, and this in addition to hastening the moult will be found to have a great deal to do, also by benefiting the shades of color of plumage of dark-colored birds as well as favoring a rich golden tinge to white birds, especially on the hackle and saddle of the males, and if fed on corn and wheat specially and a little sulphur to the soft food, which will nearly equalize it. In this way you can bring the fowls to moult whenever it is wished (perhaps not entirely while you wait), but they will be kept in good health as well in this chosen way of practice.

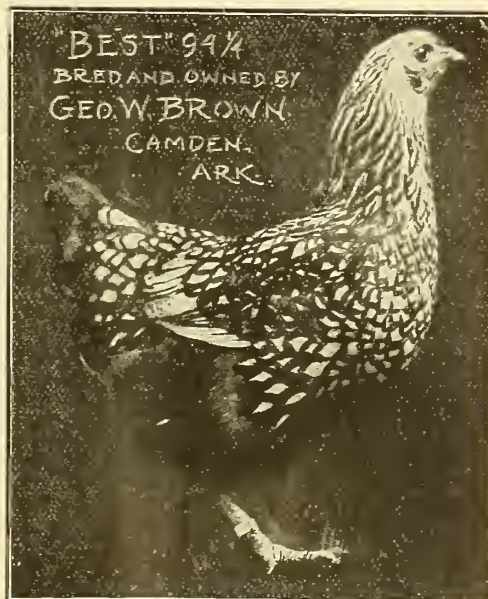

Should a hen still persist in laying change her from one place to another; if she runs at liberty coop her up.

Our plan is to bring on the moulting season by feeding as described and make the period one of rest as much as possible.

If a fowl by chance should droop, as sometimes is the case, give it a tonic of muriatic tincture of iron; one teaspoonful to a gallon of drinking water will suffice. Allow plenty of sharp grit and occasionally mix clean sand in their soft food and a pan of crushed charcoal where they can have free access to it is a good additional precaution during moulting.

As stated previously, all fowls must be kept free from lice during the moult or they will become so debilitated that it will take all the fall to recuperate, and in that case you will get no eggs again until next spring.

As the legs are a part of the moult, which is seldom thought about by any one, if you want decided yellow, white

SILVER WYANDOTTE FEMALE.

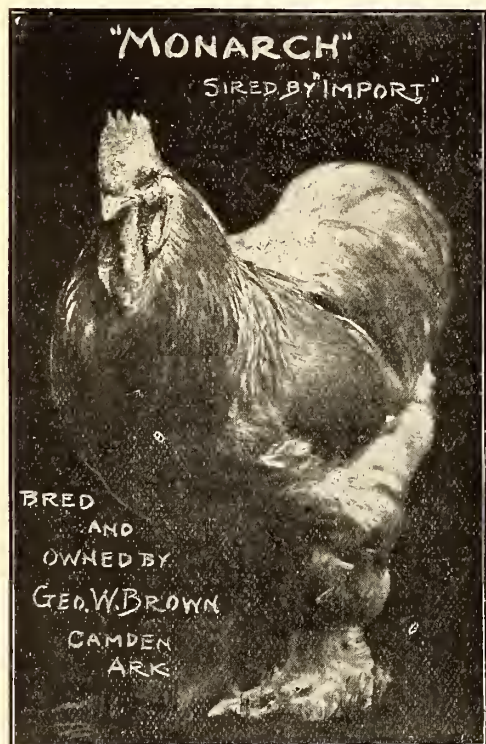

Bred and Owned by George W. Brown, Camden, Ark.

or black legs, as the case may be, have a shed large enough so that the fowls can be fed in it. Therein have about six inches of sand on the floor and into this sand scatter the grain and rake it well under, leaving just enough on top to encourage the fowls to scratch for more. This sand should be perfectly clear and free from any foreign substances that are apt to discolor the legs and feet. If the sand is

nice and white, as well as clean, it will get all the dirt out of from under the leg scales that one has so much trouble with at show time. If some fowls have a few scabs or scaly legs and the legs are yellow treat them with sulphur and lard, adding a few drops of carbolic acid. This applied to the legs about four times two days apart will generally clean the legs if not too scaly. When you find one that is very badly affected first apply coal oil the same number of times and then follow with the lard and sulphur. I shall here state, although not relating to moulting, that from experience the worst cases of scaly legs can be cured by taking the fowl in hand and plunging its legs and feet in a tin containing coal oil for exactly three minutes by the clock and, after retracting them, let the bird run. The next day it may be found that the fowl so treated will do nothing but lie down, but the next day will be as well as ever and every particle of scale will drop off in less than two weeks. This very efficacious cure will not at all spoil the plumage of a feather-legged fowl.

Returning to our subject will say that with constant scratching in the sand and the grease on their legs it will not take long to have them polished up like young legs, and they should, if the right color was there once to begin with, be as bright as those of the youngest fowl. For white legs use oxide of zinc in lieu of sulphur.

Poultry requires strict attention during their moult, as more diseases are contracted at this time than at any other, and by the use of good, sound food, pure water, plenty of room and good, clean quarters only can it be pulled through with safety. The heavy strain upon the constitution of fowls in casting their entire coat of feathers and putting on a new one is much greater than any one could possibly suppose, and if the best care is not given them they become reduced in condition to such an extent that the liability to contract diseases is such that they scarcely escape it. The

sound grain and by no means the refuse of anything. Do not confine to one variety but different varieties. Corn, wheat, oats, kaffir corn, millet, buckwheat; any good sound grain they relish, and occasionally a little sunflower seed if it can be conveniently gotten, and a wheat ration once or twice a week. The importance of good, pure water cannot be overestimated during moulting time, and twice a day

SINGLE COMB BROWN LEGHORN.
First Prize Cock New York, 1905. Bred and Owned by W. H. Weibke, Ft. Wayne, Ind.

is not too often to change it, and to this may occasionally be added a stimulant for the occasion by taking two ounces of sulphuric acid and one pound of sulphate of iron and dissolving the two ingredients in one gallon of water. This should, if used, be carefully corked up in a jug and about twice a week one tablespoonful added to each gallon of drinking water used. Air slacked lime has been largely used during the moulting season of late years and by many recommended to scatter freely in the poultry houses. We have used it but have entirely abandoned it, as air slacked lime produces an irritation to the nasal organs of the birds and colds follow, and all poultrymen know what follows colds—the deadly roup!

The very hot weather we have had this season has had the effect of causing many fowls around here to go into an early moult. This is desirable for many reasons, the birds getting through the moulting process before the cold weather sets in so much desired without the ill effects that often result if the moult is deferred until the variable temperature and heavy rains have arrived, and the stock birds commence to lay sooner and are in better condition for producing strong and healthy chickens. Those fowls, too, that moult early have better and less trying time than those that change their plumage later.

In recapitulating the items desired upon the moulting subject can simply say: (1) Feed to be used and given has been duly mentioned; (2) care of fowls, all possible has been said; (3) delicacy and gloss of plumage, all that could be said is to be sure to use powdered sulphur and sunflower seed with best of effects upon it; (4) treatise in general on the moulting subject thoroughly entered into as it reads.

Poughkeepsie, N. Y.

A. V. MEERSCH.

Some of the causes of roup are sudden and extreme changes in temperature, damp houses and draughts. It is generally easier to prevent the disease than to cure it.

Overcrowding is one of the worst and most frequent mistakes made by poultrymen.

Have your fowls so tame that you can go among them without causing fright. You will get better egg production.

Unless you use the proper amount of precaution, you will raise a large, healthy crop of lice.

worst thing that can be done is to crowd too many in one roosting place at night-time in badly ventilated and unclean quarters. Make everything clean first and use disinfectants. The best disinfectant that has yet been tried is crude acid and coal oil, about one pint of the acid to one gallon of kerosene. Use this cleverly and do not be stingy with it. Thoroughly paint the roosts and dropping boards, and, better still, the entire inside of the poultry house. Paint the roosts once or twice a week if convenient during the moulting season. Allow no more fowls in one house than there are roosts to accommodate them by giving each fowl enough space so that it may sit down without touching another. Feed good

ORIGIN AND HISTORY OF THE BREEDS

The Silver Wyandotte the Product of the Efforts of Many Men Working Along the Same Lines in Different Parts of the Country—The Original Intent Was to Give to the Fancy a Sebright Cochins Bantam—The Size Proved Too Large for a Bantam and Too Small for a Sebright Cochins—For Years the Warring Factions Could Not Agree Upon a Standard, Some Wanting Single Comb, Others Demanding a Rose Comb—Trials and Troubles of the First Member of the Now Most Popular Family of Standard Bred Fowls—The Varieties of the Wyandotte.

Paper No. 4.—The Wyandotte Family.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal

To write even briefly of the history and origin of the Silver Wyandotte fowl is to court trouble. So much has been written that is false or only partly true; so much truth has been told and this truth ridiculed and denounced; so much of the productive efforts of hardworking, ambitious fanciers has been rejected and honorable names tarnished. Above and beyond this there has been, is now and always will be, evidently, an honest difference of opinion as to the true facts regarding the origin of the Silver Wyandotte.

Prior to their admission to the Standard in 1883 there were no recognized Wyandottes. An attempt was made to secure for them official recognition in 1877.

The first mention in public print made of these new fowls appeared in *Poultry World*, March, 1876. Mr. D. W. Hooker, writing on "New Varieties," had this to say of American Sebrights, or Sebright Cochins:

"Where and how this variety originated I am unable to state after diligent inquiry. It has marks of both the Brahma and the Hamburg. The head is crowned with a good, double comb; wattles and earlobes both red and of medium size; hackle black, striped with white; back broad, with black Brahma-like tail; breast white, deep and broad, and back and breast feathers deeply laced; wings, primary feathers mostly white, and lower wing coverts tipped with black, making a distinct bar; legs short and slightly feathered; coloring throughout clear black and white, with a tendency to gray on the hackle and saddle; weight about eight pounds for the cock and six pounds for the hen. Their valued points are that they are good layers the year round; they are not troublesome to break up from sitting; they are fine for the table, dressing a rich yellow; and, while being good foragers, they are not disposed to fly.

"Though possessing the characteristics of a pure breed, so marked as to be distinguished the moment the eye rests upon them, they have not yet bred true enough to feather to knock at the door of the Standard. There is yet much variety in the lacing; in some the comb shows yet the 'pea,' and in others the Hamburg point. Some are also clean-legged. But with careful breeding they have a prospect of becoming one of the most valued of our domestic fowls. I trust their breeders will not knock (apply for admission to the Standard-Editor) until their points become so established that the fraternity shall bid them a cordial 'come in'."

Mr. L. M. Kidder contributed the following to the same journal, November, 1877, in writing of this fowl:

"In size they are much like Plymouth Rocks; in form they are like no other fowl; bodies are very deep and wide, carrying a large amount of the very best quality of flesh. In color, as the name seems to indicate, the breast of the cock and the entire body of the hen much resembles the beautiful white and black of the Silver Laced Sebright Bantams, except that the lacing is broader. Hens' necks are striped like Brahmas', and they have a glossy, green-black tail, a little larger than a Brahmas'. The hen has a very low, flat rose comb. Her weight at maturity is six to eight pounds. The color of the cock, except the breast, is much like that of the Dark Brahma, but the form is more like the Dorking. Weight, eight to eleven pounds. Both have, or should have, clean, bright yellow legs, free from feathering. They are very quiet, sociable birds, excellent layers, sitters and mothers, without that inveterate sitting propensity of all Asiatics. The chicks feather early, grow plump at six weeks, and are prime for the table after eight weeks old. They are very hardy and healthy, and for general food qualities I have never raised their equal."

Francis Soule showed some of these birds as American

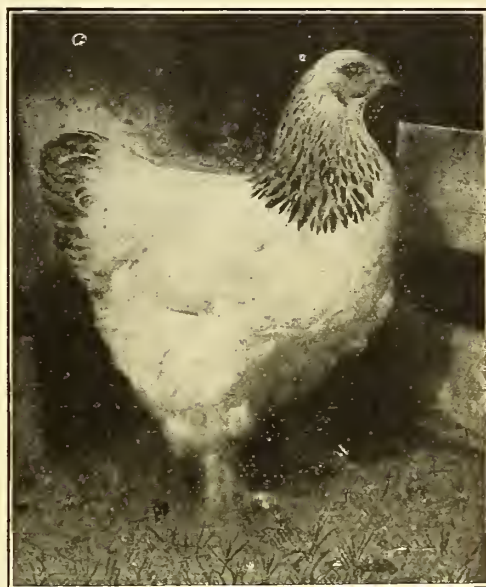

Sebrights at the Boston Exhibition in 1878. Writing to the *Poultry World* in September, 1879, he said:

"At the last exhibit of the Massachusetts Poultry Association, held in Boston, I called the attention of two of the committee to my fowls and asked what prospect there was of them being admitted to the Standard. They said they were fine birds and the breeders of this variety should agree upon the Standard. But as long as some want single combs and some rose combs, some feathered legs and some smooth legs, they cannot agree to admit them."

It is a matter of record that at that time Mr. Soule endeavored to have the breeders agree upon the rose comb. Here, then, was plainly the Silver Wyandotte in crude form.

Mr. I. K. Felch, who attended the 1877 meeting of the American Poultry Association, at which time the newcomers were refused admission to the Standard, wrote as follows:

"It was without doubt the intention with the first cross to produce an improved Cochins Bantam, the cross being a Sebright Bantam and a Cochins hen. When the size proved too large they offered and illustrated as Sebright Cochins. This suggested the cross of Silver Spangled Hamburgs and Buff Cochins. These two crosses, mingled with another cross through a half-breed and a Cochins hen, became the blood mixture of the early birds offered to the American Poultry Association as American Sebrights. Their friends could not

A Prize Winning Light Brahma Pullet, Owned by I. N. Barker & Son, Thorntown, Ind.

agree as to the comb being single or double, as it was then expressed, and, the name being so suggestive of an American Bantam, the request was refused and the matter referred back to the committee."

Mr. J. Y. Bicknell, in the *AMERICAN POULTRY JOURNAL*, January, 1886, said:

"Birds similar to the Wyandottes were bred in Oneida County, New York, as early as 1866. Mr. Payne made an attempt to have the American Poultry Association recognize them in 1877, but failed simply because the specimens offered were pronounced unworthy of recognition."

Mr. L. Whittaker in 1904 wrote to Mr. T. E. Orr concerning this meeting *The Poultry Book*:

"My birds were not represented there. Mr. Payne afterwards wrote me, admitting that it was a motley lot of birds, no two breeders agreeing on name, comb, etc."

Mr. I. K. Felch, in *The Poultry Book*, page 655, further says:

"There is no disputing the fact that at that time Ray, Baker and Rev. Benson were breeding them as Sebright Cochins; that the first cross was a large Sebright Bantam cock with a Buff Cochins hen; that this was subsequently crossed by Hamburgs; that Kidder did introduce Dark Brahma blood and then the Silver Spangled Hamburg male. All this came out at the Buffalo meeting in 1877. I have Ray's letters, dated 1871, with an endorsement on the back in 1886 by A. S. Baker, that show that the first cross was as early as 1864 to 1866. Ray was one of the two or three breeding these birds in 1867, but the fact that he was hunting for crosses to breed to his shows that there were others

ARNOLD'S "BIG FOUR."

Bred and Exhibited by Aug. D. Arnold, Dillsburg, Pa.

at it, too. Between 1877 and 1883 there was another top-cross and the blood of the French Breds and the Hamburg was added—also light-colored specimens of the Dark Brahma. Ray, Baker and Benson were the starters, but these other crosses were added before they went into the Standard in 1883."

It will thus be seen that prior to 1877 several persons in different parts of the country were engaged in an effort to produce the best American Seabrights; that production of these fowls were made about the same time by several persons; that in color the desire of all was to produce the well-defined lacing of the present Silver Wyandotte; that these birds are the foundation upon which the Silver Wyandotte has been builded; that upon the suggestion of the American Poultry Association in 1877 the breeders of the American Sebright and Sebright Cochins got together and agreed upon what they deemed should be the Standard requirements of their creation.

To Mr. L. Whittaker, of Michigan, is due the credit of picking up the fragments of these early crosses, developing them into something tangible and of giving to the world the best in the foundation upon which the Standard Silver Wyandotte of today rests. In a letter to Mr. T. E. Orr (*The Poultry Book*) Mr. Whittaker wrote:

"I do claim the honor of bringing order out of chaos, of shaping up the breed to what it finally became—a large, round-bodied bird with Sebright lacing, rose combs and clean, yellow shanks; of so illustrating it in 1874 and of naming it the American Sebright in 1877; that the same bird was admitted to the Standard in 1883 as the Wyandotte on practically the same Standard description as I had used for years but which was written by Mr. Felch in 1881, he at that time preferring the name Hambletonian."

Mr. Whittaker's position is safe in history and time will not take from him the honor which is his by right of effort and practical results obtained.

Mr. F. A. Houlette, of New York, suggested the name Wyandotte, which was accepted by the warring factions as a compromise.

The original Wyandotte became known as the Silver Laced Wyandotte upon the admission to the Standard of the Golden Wyandottes. We have always held that it was a mistake to admit any other fowl to the Standard as Wyandottes.

WYANDOTTE BREED CHARACTERISTICS.

The Standard calls for the following weights in all varieties of the Wyandottes: Cock, eight and one-half pounds; hen, six and one-half pounds; cockerel, seven and one-half pounds; pullet, five and one-half pounds.

The Wyandotte is a bird of curves. No straight lines in the form of a Wyandotte can be tolerated. A long back, such as we find in a Plymouth Rock, would rob a Wyandotte of grace and beauty of form. There must be no breaks and no angles. The body must be rounded out and full in every section. The typical Wyandotte is set low on legs, and stilty appearance being foreign to a good specimen. The breast is carried low, giving the fowl the appearance of tipping forward slightly. The Wyandotte rose comb is distinct and must not be on the lines of other rose combs, such as that of the Hamburg or Rose Comb Leghorns. The Wyandotte comb must be free of any coarseness and should follow the curvature of the head.

In color the Silver Wyandotte is one of the most beautiful of all feathered creatures. The male must, above all else, be silvery in color, free from any brass or smut. The wing bar is one of the crowning beauties of the male. This is formed by the wing coverts, the lower half of each feather being white with a black edging. There should be two of these bars, well defined. The hackle is silvery white with a distinct black stripe through the middle of each feather, terminating before it reaches the end of the feather. Breast and thighs solid glossy black. There must be no tinge of white or gray in these sections. Tail black.

Color of the female: Head plumage, silvery gray; neck, silvery gray, with a black stripe through each feather, tapering to a point near the extremity of each feather; back, web of feathers black, with large oval-shaped white centers, which must be free from black or bronze. Feathers in the body and fluff should be black in the web, with oval-shaped white centers. Wings, primaries, black, with the lower edge white; secondaries, black, the lower edge of the outer web being white, with narrow black edging. Tail, greater coverts black; lesser coverts black with white center. Comb, wattles and earlobes, a bright red. Eyes, bright red or bay. Beak, dark horn, shading to yellow at point. Face, bright red.

THE GOLDEN WYANDOTTE.

The younger generation of fanciers have not seen such a condition of excitement as reigned during the days closely following the admission of the Wyandotte to the Standard.

It is not at all strange that the Wyandotte family rapidly increased in numbers. As Mr. Stoddard put it in his *Poultry World* at that time, "The country is (was) Wyandotte crazy."

The Golden Wyandottes were the second variety of the breed offered the fanciers. The honor of their origin belongs to Mr. Joseph McKeen, of Wisconsin. He produced a fowl the product of a cross of Rose Comb Brown Leghorns, Pea Comb Partridge Cochins and buff-colored females; these crossed with Golden Sebrights and Buff Cochins. These Golden were, of course, very crude in color markings compared with the beautiful Golden Wyandotte of today, and it took years of thoughtful, skillful breeding to produce the beautiful and brilliant colors now so well blended in the Standard Golden Wyandotte.

The Standard requires of the Golden Wyandotte the same color distinctions as it does of the Silver Wyandotte, except that "golden bay" be substituted for "white."

WHITE WYANDOTTES.

The White Wyandottes, now the most popular of all the Wyandotte family and the leaders in point of numbers in nearly all showrooms, especially in the larger and more important exhibitions, was admitted to the Standard in 1888. It has been held that they were in existence prior to 1870, but the claim cannot be substantiated. It is a fact that the early Silver Wyandottes did produce both black and white sports (as they do today), but it was long after 1870 that the Silvers were anywhere nearly established in color markings. So it is that these very early white sports cannot be considered as having been White Wyandottes. Certainly it is that at that time they were not deemed worthy the attention of the fanciers. It was somewhere between 1880 and 1883 that the white sports were given attention. To Mr. B. M. Briggs and G. W. Toule belongs the credit of bringing them before the public in good form.

For a time the White Wyandottes enjoyed a great boom. Then came the decline of the Silvers by reason of unscrupulous breeders sending out stock possessing but little worth. The Whites suffered with the Silvers, and for a time the demand for them was not large. Now all is changed. Worth won out, as it usually does in this world, and the once neglected Whites are the leaders of today.

In plumage color the White Wyandotte must be chalk white throughout. Red, buff or black in any part of the plumage is a disqualification. Gray in plumage does not disqualify, but a specimen showing any of it must be severely punished by the judge.

BUFF WYANDOTTES.

No individual fancier can justly claim the honor of having given the beautiful and useful Buff Wyandotte to the world. Between the years 1886 and 1893 various fanciers throughout the country were striving for the production of a fowl buff in color having Wyandotte shape and characteristics. Here are some of the crosses employed in the production of the Buff Wyandotte:

Silver Wyandotte-Rhode Island Red. This was the R. G. Buffington foundation.

Golden Wyandottes with Buff Cochins.

Cross of White and Golden Wyandottes bred to Buff Cochins.

Golden and White Wyandotte crosses bred to Golden Wyandottes.

Buff Cochins bred to Golden Spangled Hamburgs.

After years of intelligent and systematic breeding the Buff Wyandotte of today was produced.

Buff Wyandotte color: Surface color an even shade of rich golden buff, free from shafting or mealy appearance. Black or white so commonly found in wings and tails is considered a very serious defect.

PARTRIDGE WYANDOTTES.

There has been more or less dispute as to the origin of the Partridge Wyandotte. It can be stated as a fact that there were two original strains.

The Cornell-Brackenbury strain was established in the East in 1889, or about that time. The first mating was a Partridge hen to a Golden Wyandotte male. A pullet from this mating was bred to a Golden Wyandotte cock. A pullet from this mating was bred to a Golden Penciled Hamburg male. The line was followed, Partridge Cochin blood again being introduced a few years later; also Golden Wyandotte blood.

Joseph McKeen, originator of the Golden Wyandotte, had been for several years prior to his death in 1896 working to produce a Partridge Wyandotte.

Mr. W. A. Doolittle, upon the death of Mr. McKeen, took this stock and with Mr. Theim, of Iowa, carried on its breeding along lines laid down by Mr. McKeen. The first cross in the production of the McKeen strain was made in

1884, being that of a Golden Wyandotte male and a Partridge Cochin hen. It is claimed by Mr. Doolittle and Mr. Theim that no other blood has ever entered their strain. The Partridge Wyandotte was admitted to the Standard at the Chicago meeting of the American Poultry Association in 1891.

The color of the Partridge Wyandotte is practically that required of the Partridge Cochin. (See Paper No. 2.)

SILVER PENCILED WYANDOTTES.

The Silver Penciled Wyandotte is a creation of the brain of the late Ezra Cornell. Mr. Cornell conceived the idea of producing this beautiful fowl. In connection with George H. Brackenbury the work was pursued. The first mating was a Dark Brahma hen to a Partridge Wyandotte male. Dark Brahma-Silver Penciled Hamburg matings were also made. It was a difficult problem, but men of brains and fanciers' skill were in charge, and after several years' hard work the variety was well established. The work was commenced about 1894. Mr. E. G. Wycoff early became connected with the work.

Color of the Silver Penciled Wyandotte: Male—Head and neck, silver white. Neck feather must have distinct black stripe extending through it, tapering to a point near the extremity of the feather. No white shafting or black edge allowed here. Back, silvery white, free from all other color. It is required that the breast be solid black; slight frosting with white allowable but not desired. Tail, black. In wings the primaries black with the lower edge white, with the ends of the feathers greenish-black. The female Silver Penciled Wyandotte is in color gray, with distinct dark penciling, resembling the Dark Brahma.

BLACK WYANDOTTES.

The Black Wyandotte originated with Mr. F. M. Clements, of Ohio, in 1885. Mr. Clements claimed they were sports from the Silver Wyandottes. Mr. F. J. Marshall, of Georgia, also had black sports from his Silver Wyandottes about the same time.

Color of the Black Wyandotte: Rich glossy black throughout. Must be free from purple barring.

COLUMBIAN WYANDOTTES.

The Columbian Wyandotte came upon the stage but a few years ago. During the show season of 1904-5 they were exhibited in goodly numbers and attracted a great deal of attention. Mr. M. B. Briggs claims to have originated them by crossing White Wyandottes and Barred Rocks. It can be stated as a positive fact that Light Brahma blood has been used by some breeders in the origin or the betterment of the Columbian Wyandotte.

In the fall of 1904 we had occasion to go out to a farm in Hardin County, Iowa, where we had a flock of Silver Wyandottes farmed out. The wife of this farmer possessed a flock of Buff Cochins. She allowed a Silver Wyandotte cock to mate with a number of her Buff Cochin females. Many of the products of this mating were typical Columbian Wyandottes so far as color markings are concerned. In shape they were not good Wyandottes and some had feathered legs. But from this flock of Silver Wyandotte-Buff Cochin cross we could have picked several birds which in color marking were the equal of the best Columbian Wyandottes we have ever examined in the showroom, and we have seen the best of those exhibited so far.

The Columbian Wyandotte is a fowl the size and shape of the Wyandotte, with same kind of comb and carrying the plumage color of the Light Brahma. It is a handsome fowl.

In commercial worth the Wyandotte is unapproached by any other breed or variety. We think the tribute paid the Wyandotte by a farmer at an Institute before which we were lecturing a few years ago tells the whole story. Our farmer friend said: "The Wyandotte is the right size—not too large, not too small. They are prolific layers, giving us eggs the year round and in abundance the winter months. We do not have to build expensive houses in which to shelter them. Their low rose combs do not suffer even in the coldest weather. This means winter eggs. They are hardy. The chicks grow rapidly and are ready for the market at eight weeks of age. The Wyandotte is always ready for the market when properly cared for, being always a round, plump chunk of the choicest chicken meat obtainable."

This tribute, while not being elegant, is, we think, eloquent. Certainly it is truthful. The Wyandotte meets completely all the requirements of a profitable fowl.

The color of the shell or the yolk has nothing to do with the value or fertility of the egg. Color is a result of feed or a natural characteristic. The fancy of the purchaser is to be considered in the matter of color of eggs, legs, skin and meat.

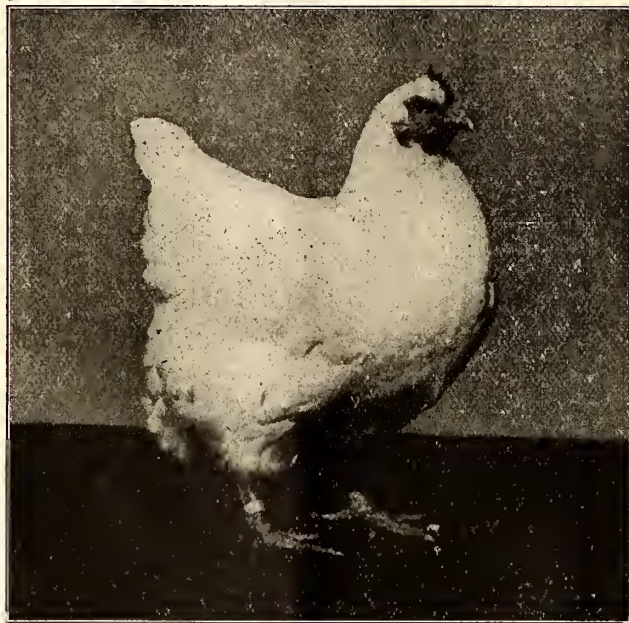

THE TRAP-NEST AND ITS ADVANTAGES TO THE BREEDER.

Practical and scientific poultrymen the world over are today acknowledging the superiority of trap-nests, but those who have not used them, and absolutely reliable ones at that, do not and cannot realize the great advantage the breeder has who does use them, and the many little secrets that they unfold to him.

The poultry breeder without trap-nests, whether breeding for market, for eggs or for fancy points (Standard requirements), which should combine to the very highest degree with market and eggs (or the utility), is working as much in the dark as would be the big department store that did not keep books. The department having apparently the biggest trade might not be the most profitable and there would be the possibility that it was not profitable at all, or that it was losing money, and so with the hen. The one laying the largest eggs or the one laying the greatest number of eggs, or both, may not lay one single egg that will hatch, and, while seemingly a most profitable hen, she is worse than none as a breeder, or, in other words, "she is not what she seems to be."

The breeding of high-class, bred-to-pay poultry, as is the breeding of all live stock and the successful management of any business a *deep continual study*, and the poultry breeder who best fits himself to study each and every detail of his business and then makes a practical and thorough application of the knowledge thus acquired is bound to make a far greater success than those not so prepared.

The word *study* means everything to the breeder, and I would write it for all poultry keepers "as with a burning

WHITE PLYMOUTH ROCK.

First hen at Cortland and second at Syracuse, N. Y., 1905. Owned and bred by Rock Hill Poultry Farm, Ossining, N. Y.

pen." We must remember there is no standing still; we must either go forward or backward, and to advance we must *study*, and *study* everlastingly.

From the articles that have been written on trap-nests thus far the general public would be led to believe that they were only of use in determining and increasing the egg yield, and while their value in this is enough to warrant their use and pay handsomely for the extra expenditure and labor necessary, still it is only a secondary consideration if one would achieve the greatest and most lasting results along that and other breeding lines and therefore must be regarded only in connection with many others of equal or even greater importance.

As in "the proof of the pudding is the eating thereof," so in the proof of the breeder is the testing thereof.

The selection of specimens for the breeding pens involves the study of the different qualities and faults of each individual which should be weighed and considered, one with another. Many of these can only be properly recognized through breeding inheritance, ancestral family characteristics

and ancestral breeding propensities. Each individual breeding trait, whether merit, blemish or habit, can be ascertained to a certainty in regard to its relation with sire, dam, grand-sire, granddam, etc., only by means of the trap-nest with its corresponding individual records.

No rule or set of rules can be laid down for all to follow at any one time or any one to follow all the time, as conditions and circumstances alter cases. The first and paramount consideration, however, in selecting a breeder should be constitution. Never under any circumstances should a bird be selected that has ever seen one single sick or sickly day. Our temptation may be great at times, but let us invariably have enough will power to say no and follow the example with sick chickens of the young man whose step-mother, having died away from home, on being telegraphed "Shall we embalm, cremate or bury?" replied, "Embalm, cremate and bury."

The breeding and selling as breeders of cured fowls has been the greatest stumbling block Standard bred poultry has ever had and has caused thousands of people to say of probably every known variety, including the "dunghill," that "that breed or variety is not as healthy as this one," when it was not the breed or variety at all but the breeder or breeders who allowed their stock to inherit weak tendencies, resulting from cured or weakly constituted fowls.

the use of our trap-nests to discard all specimens that lay continuously undersized eggs, overly large or double-yolked eggs, poorly-shaped eggs, eggs with rough, uneven shell and very thin-shelled eggs.

The males having been selected most carefully by duly considering their ancestral backing and their individual merits, we will mate with each male the females which will balance and nick to the best advantage, always giving males as they rank the preferences. The eggs from stock thus mated, if incubated under hens or in pedigreed-incubator trays in such a manner that we will know by the use of toe marks recorded the sire and dam of every chick hatched and the specimens that do not and cannot be made to produce fertile eggs, will show the results from each pair of birds with no guesswork.

This is all much easier said than done, but if we will carefully follow this system out from year to year we will soon find that there is far greater value to trap-nests than merely to assist in detecting the best layers and increasing the egg yield. We will find many pleasant surprises and also many disappointments. Oftentimes from the specimens that we expect the most we will receive the least in eggs, fertility and high-class progeny. Just as in the race horse, we often find the greatest breeders or producers never have shown any great amount of speed themselves, sometimes

TRAP-NESTS AND THEIR WORKING ARRANGEMENTS.

The practice of inbreeding for a thousand years would not do as much real damage, and nothing could do so much for "better poultry and more of it" than for every breeder to realize and forestall this danger.

In selecting specimens showing the greatest constitution, together with extra strength and vigor, we should observe very closely the head, and especially the eye and beak.

A good cattle buyer will tell you that if he is only to see one part of a steer when buying feeders he would prefer that part always to be the head, and if I could only see one part of a bird in selecting breeders for constitutional strength and vigor, and, in fact, everything except fancy points, I also would prefer that part to be the head. Let us demand a *rich red, bright bay* eye, as nothing so strongly denotes a good constitution; but, of course, we all would wish to see each and every part of a fowl and to examine each and every section before placing in our breeding pens.

After having selected only such specimens as have exceptional constitutional strength and vigor, we must then go over them once more very carefully, choosing only those that we feel confident from experience and a knowledge of their ancestry will produce, when properly mated, exceptional specimens, coming as nearly as possible to all Standard requirements.

We are now ready by means of records obtained through

none at all, and those that have been phenomenal whirlwinds themselves have often failed to get offsprings that could go in the list.

We never can tell what we can do until we try, and right here is wherein the great value of the trap-nest lies, for we never will know the capabilities of any one specimen until we have tested it and cannot properly decide what mating to form next unless we know the results of what we have done, and it is impossible for us to realize what we have accomplished without an accurate record obtained through the use of the trap-nest.

The old guesswork way of breeding poultry is as far behind the times and as uncertain with results compared with the trap-nest system as the old style of advertising compared with an up-to-date keyed and indexed system.

There is more to learn through a trap-nest system than a large-sized Webster's Dictionary would hold, and to those who are afraid that the poultry business is being overdone or that there is danger of its being overdone just enter into the breeding of high-class Standard-bred poultry, bred to pay, by an *up-to-date trap-nest system*, stick to it carefully and persistently, and from your results, financially and otherwise, I will guarantee that you will agree with me that the poultry business is only in its infancy.

Hartington, Neb.

H. P. RANKIN.

Monthly Prize Article Department

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

*The first prize in the contest this month has been awarded Will Clark, Sullivan, Ohio, and second prize to John N. Johnson, Wenatchee, Wash.

POULTRY FOR THE INVALID.

Too much cannot be expected from an invalid. But at the same time we do not care to be elbowed to one side and be so overrun by the strong as to receive no recognition (be it ever so limited) in connection with the breeding of standard breed poultry.

I can think of no other occupation for a weak and afflicted brother or sister which would afford more pleasure and healthful pastime, as well as profit (which always adds to the pleasure) than caring for a flock of pure-bred fowls of your favorite variety, though it be on a very small scale. To the above I can testify by my own personal experience, my lot having been cast in that direction for the past dozen years.

Of course those who are not strong must not undertake more than they can carry out thoroughly. My advice would be: Choose the variety you like best and keep that variety only. Get the very best strain of fowls it is possible to find for your foundation stock, even if they are a little more expensive on the start, but it will mean more pleasure and more profit to you later on. Subscribe for a few good poultry papers, and also get the Standard of Perfection. Read and study them thoroughly. In this way you will learn the best methods of caring for your fowls, and will also learn to know a good bird when you see it.

If occasionally there is something to be done which your physical condition will not permit you to do yourself, perhaps some other member of the family can be drafted into service, or you can hire a man for a short time. But be sure the work is done under your personal directions and that it is done exactly as you wish it to be.

When you have succeeded in raising a nice lot of chicks advertise them. Let people know that you have something good to sell. There are always plenty of buyers for first class breeding and exhibition poultry. And as you can buy your shipping coops direct from the manufacturers, the labor of shipping the fowls and eggs sold, is reduced to the minimum.

It is not necessary that one should raise poultry in almost unlimited number to make advertising profitable. Where it is not convenient to raise many chicks, more than are needed to keep a supply of layers on hand, the attention can be turned more to the production of eggs for hatching, which I have found to be the most pleasant and profitable part of the poultry business for the invalid.

It is also a source of great pleasure to those who are handicapped from engaging in more ardent labors and who are ambitious enough to want to do a little something, according as their strength will permit, to attend to the correspondence connected with a small mail order business as I have described. And so I claim an invalid can oftentimes take up the poultry business in a small way and derive a great deal of good therefrom in many ways. It will perhaps cause him to spend more of his time out in the fresh pure air. It will also furnish something to occupy his mind which otherwise might be filled with gloom and unpleasant thoughts.

It will also produce some profit, which greatly increases the pleasures.

If anyone reading this article who is unable to engage in the more laborious tasks of life shall receive any benefit or encouragement therefrom I shall have accomplished my purpose.

Sullivan, Ohio.

WILL CLARK.

It is most essential not to invent or to supply imaginary wants in fowls. They do not require coaxing to eat and wherever food can be seen lying in the yards or pens, there is waste and mismanagement.

REMOVING TO WINTER QUARTERS AND CARE DURING WINTER.

We are approaching the time when most poultrymen must gather their flocks into winter quarters and prepare for those high priced eggs we were thinking of while caring for the little chicks last spring. While there is much difference of opinion regarding the time to make the change, and the easiest and most satisfactory method of accomplishing it, to not have any bad effect on the health of the fowls, they will each have their own particular way, and most of them will be reasonably successful. With me I like to make the change while the weather is still warm, so there can be plenty of pure fresh air without exposing the fowl to the cold wind of the storms that are liable to occur during the night after the cold weather is upon us, thus causing bad colds which sends so many amateur poultrymen looking for rump cure. It is at this change that the "curtain front" house will be most useful, having three tight walls and the curtain raised, leaving the front open to admit plenty of pure air and none of the drafts caused by so many systems of ventilation.

If you have not separated the sexes yet, you should do so at this time, placing the hens and pullets in different yards and the choice cockerels (if you keep a standard breed) should be selected and reserved for breeders. The remainder should be sent to the butcher or caponized and saved for the high priced market next spring.

The flock being divided and housed, you must now give close attention to the feeding, if the yards are well supplied with green food one of the most difficult problems of the average poultry keeper is solved, until winter closes in and makes it unavailable. When the runs are bare a supply of vegetables, either rooted or greentopped variety, is the most economical at this time of the year, for those who can raise them, but for all round green food Alfalfa hay that has been cured so it has not dropped the leaves will be found the best. Just put a small forkful in the scratching shed and the whole flock will be busy as bees until every leaf and the small bits of straw that they can break off and swallow will be cleaned up and the remainder will make good scratching material to feed the whole grain in, thus serving a double purpose and saving lots of labor.

The grain part of their rations can be best fed by grinding and placing in self-feeding hoppers, excepting enough whole grain thrown in the scratching shed to keep them exercising. By grinding or crushing the grain in the hoppers, they will be compelled to eat more slowly, and will not gorge as they would on whole grain. The grain should be a mixture of oats, wheat, barley and corn, fed in separate hoppers or collectively, as best suits the attendant. Either of the last three grains may be omitted if not convenient to get, but I should not like to omit oats from the ration when possible to get it, for it is "the feed" for all kinds of stock. If we will add a good grade of meat scraps and plenty of pure water, and see to it, that the grit box and dust bath are kept well supplied, we can gather a good share of those eggs we have been planning for.

But we must not forget to keep a close lookout for those swelled heads and watery eyes so frequent in close winter quarters, when the ventilation is poor, or comes in with a draft, and the houses dark and damp, and when treating these cases we don't want to forget that an abundance of light, pure air, and a good clean pen, are a better medicine than any of the remedies made by men.

JOHN N. JOHNSON.

Wenatchee, Wash.

A barbarous practice or habit which one should combat in every way is that which consists in mutilating fowls when they are considered to be suffering with pip. We repeat it, as soon as one remarks that the hen does not drink it is considered to be afflicted with pip. The white horny substance at the point of the tongue is a species of nail given by Nature to the hen to enable it to pick up the grain and seed from the ground, whilst pip is caused by ulcerated bones in the throat. The disease can be easily cured. A small bit of butter the size of a nut and a bit of aloes of the size of a pea—make a pill with the aloes and butter and put it down the hen's throat. In an hour the hen will be cured.

Don't throw away any sour milk; the chicks are fond of it, and it is good for them.

Hog-fat is never desirable in poultry for market.

Fowls that range are more or less tough.

Close-grained meat is preferred.

A CITY LOT POULTRY PLANT.

The question as to whether a few chickens in the small quarters afforded them by a city lot can be kept profitably is an old and much discussed one. In nearly all the articles I have ever read on the subject the writer has had more time and space to devote to his plant than the average business man or mechanic can give his poultry.

Being a rather busy man and having about the average of time and room for poultry keeping, I believe that my experience may be of interest to at least some of the readers of this magazine.

Nearly ten years ago I began to raise poultry on a city lot, and my birds have never had the benefit of "free range" or "the shade and clover of an orchard," nor any of the other much talked of advantages of a country run, but they have nevertheless grown to a vigorous maturity in their close confinement.

A few birds can, I believe, be raised in small quarters as well as on an open farm, because environment will not make show birds nor heavy layers unless those qualities have been handed down to the chicks for generation after generation by their ancestors.

If the city plant is to produce good show birds the breeding pen must be of the very best or the object of one's work will be entirely beyond one's reach, because the limited number of birds that can be properly raised will not produce enough good show birds in proportion to the culls to make the plant a financial success. Then, if enough chicks are hatched to produce a good number of show birds, the probabilities are that the small runs will be so overcrowded that instead of having a few first-class birds in the fall the owner will have many third and fourth-class birds.

Good show birds can be successfully raised in very small quarters as long as the breeder culls often and freely enough to allow all remaining birds a fair amount of room, and the smaller the space the more frequently and critically must the culling be done.

If, on the other hand, the busy man of the city is going to try to produce birds that will supply him with fresh eggs during most of the year he will, I believe, be far more successful and his poultry will be a more continual source of pleasure to him and his entire household, thereby assuring him of the assistance of any member of his family at any time he may desire it.

Then, again, the small quarters are not nearly as great a handicap in raising egg-producing pullets as they are to the one who is striving for the ideal show bird. If one wants only a good flock of pullets he can easily cull 40 to 60 per cent of his chicks just by either eating or selling all his cockerels when broilers and he can add another 10 to 20 per cent by disposing of his poor pullets in the same way. By this method of culling one should have practically only the pullets he intends to winter in his runs by the Fourth of July.

In this way one does not have a flock nearly equal in males and females, nor will he have nearly so many birds to feed to maturity. Thus will the egg producer have the advantage over his neighbor who raises only the promising show birds in the two most important points in a city plant, namely, in space and cost of feeding.

If the city plant is to produce both the utility and fancy, it would seem very difficult to me to cull a flock of chicks so as to have enough cockerels from which to choose show birds and still have enough pullets to fill the winter egg basket.

My experience has been that it required all the space I have ever had to produce fifteen to twenty-five good pullets and only three or four cockerels. So unless one can pick the cockerels for the showroom very young his chance to produce show birds and his flock of pullets, too, looks very small to me.

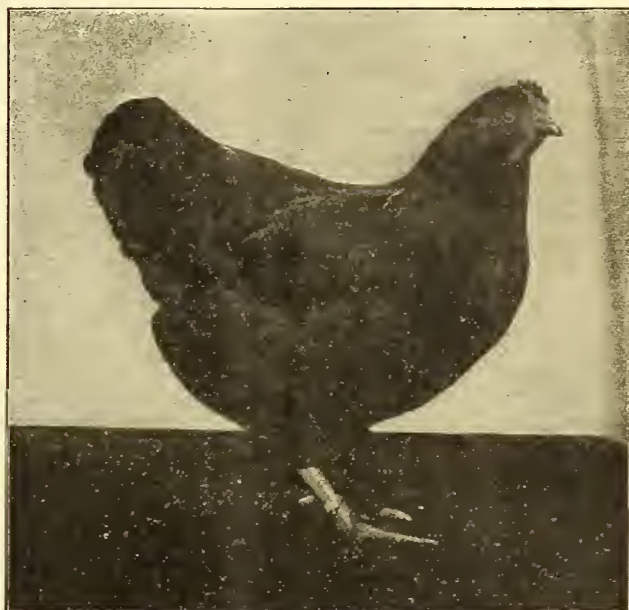

Since I have given my views on the question as to whether the city plant shall produce utility or show birds, and since I have decided in favor of the utility birds for myself, provided they are of one breed and the breeder tries each year to bring his flock up in Standard points as well as in utility, we will now look at practical care and housing of a city flock.

After careful work with and study of several breeds I chose the White Wyandottes as the breed best adapted to a small plant, where the time and space for caring for a flock are limited. The Wyandottes were my choice because they grow to good broilers very young, thereby allowing one to cull early and profitably. They are good feeders and seem to stand up, eat and grow where other chicks die. They stand close confinement excellently and do not annoy you

by flying. They are also very prolific layers at all seasons, as their short combs withstand severe cold very well, and thus they will lay when most single combed birds are frozen up. As to appearance, few breeds are their equal and none their superior. Many readers of this article will differ greatly with me as to breed and purpose of breeding, but as I am simply writing about my own experience and judgment we have now gotten to the practical part of a small poultry plant which is to produce profitably utility White Wyandottes and as many eggs as possible.

My plant consists of one house facing south, which is 8 feet wide by 20 feet long, 7½ feet high in front and 6 feet behind. The house is divided into two rooms, one 8x8 for laying and roosting and the other 8x12 is used as a scratching shed.

The laying room is built on a solid foundation about a foot above the ground. This room is sealed inside with matched lumber and has a matched board floor. The roof of the entire house is three-ply tar paper. There is a large double sash and a good-sized door in the front. A small sliding window in the east side and a similar window in the west side which opens into the scratching shed. There is also a small stationary window in the north side. Thus I get light from all sides and ventilation from three sides. Inside I have a platform 20 inches above the floor and 3 feet wide, upon which I have five Maine State trap-nests. Above

PARTRIDGE WYANDOTTE PULLET.

Winner of first at Syracuse and second at Hagerstown, 1905. Bred and owned by Rock Hill Poultry Farm, Ossining, N. Y.

the nests is the droppings board, which is made to project over the front of the nests enough to darken the laying compartments of the nests. The dropping board is in three movable sections for convenience in cleaning. The two roosts are above the dropping board and made of 2x2 inch stuff 8 feet long set loosely in blocks at each end; so they also are removable. Have also 4 foot trough on floor in which table scraps are fed. With this arrangement one can remove the roosts, nests, dropping board and trough in a few minutes, and thus have only the nest platform and floor to clean in the house, while there is no floor space wasted.

On the wall I hang a two-gallon water can, a grit and shell box, which always contains grit, shell and charcoal. Next to these I keep a homemade beef-scrap hopper, which is never empty.

The floors of both the laying and scratching shed are kept covered with from six to ten inches of clover hay, which is the best available scratching litter.

The scratching shed has a gravel bottom filled to the level of floor of laying house and then the clover on top. This house has a 4 foot by 8 foot opening covered with wire and commencing about 18 inches above the floor, the balance of the height being sided. The door is 3 feet wide and the frame is made of 4x¾ inch stuff, covered outside with wire and inside with oiled muslin. Have also oiled muslin curtain on frame and hinged at the top for closing the 4 foot opening in real cold or wet, stormy weather.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Origin and History of the Breeds

This is the title of a series of articles now appearing in these columns compiled by that able writer Mr. Thos. F. Rigg, associate editor AMERICAN POULTRY JOURNAL. These articles will be continued until all the standard varieties have been included. This, we believe, is the first time that any writer has ever attempted to go into this subject so thoroughly, and when completed will be something for the present day fanciers to turn to for reference, for the originators of many of our present breeds of fowls are rapidly passing away and in a few years from now it will be impossible to get authentic data such as Mr. Rigg is now presenting to readers of AMERICAN POULTRY JOURNAL. In a work of this character, covering a period of almost a century, a vast amount of labor is

necessary, and any one who is in a position to give reliable information about the origin and history of any of the breeds should send same to Mr. Thos. F. Rigg, Iowa Falls, Iowa, who will greatly appreciate any help given him along this line.

The Good of the Huckster.

The huckster has been decried by both friend and foe of the fancy, yet he has had his hand in the betterment of state fairs large and small. The huckster is the man who was largely influential in the securing of bigger premiums from fair societies that were too close in the matter. He has done his share in educating the people to better fowls and often if it had not been for his showing the exhibit would have been small. Then, too, the huckster has stimulated the breeder to produce better birds and never a fair season goes by without seeing the breeder get one notch further ahead of the huckster. Mr. Huckster's work has been largely of a good character, and even if he does grow more and more professional as the years pass he must ever keep in mind the specialist and the quality of stock he aims to produce. Shows do not seem to become more numerous compared with five seasons ago, and specialists still increase in numbers. Breeders and fanciers gaining in numbers will the sooner force out the huckster.

No Corner Here.

From all the signs in hendom the busy American hen refuses to allow any one to corner the market on fresh eggs or dressed table fowls. She can be pointed to with pride as of an anti-monopolistic nature. Just when the would-be cornerers of eggs are apparently successful the barnyard hen hops up on her nest in the hay mow and lays a few eggs to take the conceit out of the money kings who dabble in eggs. The storing of eggs till high prices come is risky business. Packing houses and cold storage plants of one big firm have been deserted—sold out to competitors and changed into other fields of business. The other commodities and necessities may be cornered, but the American hen—never!

For Better Market Fowls.

The Sydney (Australia) Daily Telegraph, not content with the egg-laying competition fads it has originated, now seeks to get the attention of Australasian poultrymen by a competition between market poulters. Each contestant chooses and fits for market about twenty fowls, sending them to be dressed and packed by experts. They are then frozen and sent to the great English market, London, to bring the best prices possible. After the returns have been made the prizes are awarded to the poulturer who raised the choicest birds. Twenty dressed fowls are packed in each crate shipped to the English markets. The fowls are all dressed by one set of experts and everything is done by them and the packers to get the greatest amount of quality out of each grower's fowls. This competition will doubtless aid the market poultry qual-

ity as the egg-laying tests have given a greater stimulus to better egg production. This new contest will be watched with interest and the particulars as to variety, breed, rearing, feeding and general care will be given in these columns as they become known. The Australians certainly are doing things in the practical poultry line. They're hustlers.

Our German friend who recently paid Mr. Northup those long prices for Rose Comb Black Minorcas is undergoing considerable hot fire in the columns of the European poultry press. Some fanciers over there seem to doubt the validity of the Count's purchases. Count Von Shultzenstein is one of the Germans who are doing a few things for the good of their fatherland. He is getting much free advertising concerning his stock and the quality of birds he breeds. He is an up-to-the-minute fancier who recognizes the value of publicity.

It Might Help, But—

Mr. Charles McAllister, who conducts a very interesting page in the Northwest Poultry Journal, has been trying to do his share in the formation of a Pacific Coast League of Poultry Associations. He wants such an organization to have a goodly authority over the shows held on the coast and sway such power as the American Kennel Club and the American Racing Association. If the American Poultry Association takes the matter in hand it can be an authority of itself. One should not think, however, that the affairs of the American Kennel Club go along without hitches and setbacks. It has its tribulations. And the daily papers tell of much trouble in the affairs of the American Racing Association. The Pacific Coast League would not make all smooth sailing.

The Season's Rumors.

A number of rumors have been set afloat in the last few weeks and all sport date lines from New York. The fanciers who held a show at Herald Square last December think somewhat of holding another show in that city in November in the Palace building. The later New York show to be held at Madison Square in January promises great activity in the Barred Plymouth Rock line. More specials are to be offered and it is being wafted about that a change of judges or methods of judging will be tried. Mr. H. J. Quilhot has been selected for judge of bantams by the National Bantam Association by a large majority—this for the Madison Square show.

Why Not Try It?

Most all the agricultural experiment stations which are doing something with poultry are accomplishing good results. The Maine station is among those at the top of the list who are in the lead. This station is making a specialty of pedigreed layers that can lay eggs and lots of them. From the bulletin issued we come on a very interesting statement concerning the breeding of the heavy layers. All the hens laying 200 eggs or more in one year from the date of their first egg are registered, but those laying 190

to 198 or 199 are not registered. The bulletin also states that they get a goodly number of their 200-egg hens from the general flock and that many of the 200-eggers do not produce their like. This is according to the laws of breeding. The ones in immediate charge of the mating could easily and profitably extend the knowledge given out in their bulletins if they would try to intensify the laying qualities of the flock or foundation stock by carefully inbreeding and giving the results to the public. For instance: Let the best cockerel of the heaviest layer or layers be mated back to their dams and a careful record of their offspring be kept. From this first line of pullets which contained three-fourths of the blood of their dam the matings would be easy to make. Mate them back to their sire or a male of good breeding a bit more distantly related. The good qualities of the cockerels from these inbred matings should also be kept track of. If when they are crossed on flocks of farmyard pullets which are poor layers the results are poor, let the public know it. This station has about reached the top in feeding and housing—we await their experiments in inbreeding to intensify the egg production.

It's Sure to Win,

There is an opportunity in most every city of 10,000 or more inhabitants for the establishment of a retail store where only poultry and eggs would be sold. For the man who can muster his courage to the fore and then keep it there by overcoming the difficulties that usually present themselves will be the harvest. By a little printer's ink he could soon have poultrymen consigning their best eggs to him. A sort of broker, a retail broker, if you please, would be his title. He would have to establish a reputation for paying the best possible prices for his produce and by soliciting only the best he would keep up his standard of quality. Extra good eggs will always be in great demand. In a large city one could confine his efforts solely to the egg trade and gradually build up his business among the best class of buyers. He should connect his name so closely to fresh eggs of quality that when eggs are mentioned his name would come to mind. The idea is gradually being worked out, here and there, with success.

Helping a Show.

Westerners, as a rule, are good advertisers, but here comes an association that knows more about it than the best of us. The seventh annual show of the South Dakota State Poultry Association will be held in the

city hall at Mitchell, in that great commonwealth, and Mr. Scallin, who is secretary, is getting out some effective advertising to that effect. Things chicken in South Dakota crystallize at Mitchell during the week of January 29 to February 3. Mr. Scallin is mailing out some handsomely gotten up cards with a fine halftone of the city hall, the large stone building that every citizen is proud of, telling when the show will be held and that the auditorium of this immense building will be used. The names of the judges are also printed on the mailing card in red ink. An association as enterprising as this deserves success—and gets it.

Western Show News.

Some news issues from Topeka, the home of one of the West's biggest state shows. Col. J. W. Hughes, secretary of the state association, has been promoted to the office of Adjutant General of the National Guard and will have to resign his post presently. Thomas Owen, the treasurer, will succeed Mr. Hughes and fulfill the duties of secretary. This will put the brunt of the next show on the new secretary's shoulders. Kansas is ahead of adjoining states in that she holds her show in Topeka each year. Her fanciers know where to find the show and an air of permanency attaches to it. Nebraska must hold her show at Lincoln every other year; she can move it at her own sweet will in the other year. She should locate it permanently. Missouri's show is taken care of financially by the state, but the association moves the show almost yearly. Iowa hopes to have state aid soon and then she ought to hold the show at the most convenient railroad center. Colorado's show always goes to Denver and this is a good plan. A state show should be a fixture.

At Illinois State Fair.

Big Hume thought he was at the World's Fair. He asked Cottom where he could find the Pike. Brinkama gave him a pass to the grand stand and in going downtown he imagined he rode on a Delmar car. 'Nough sed.

* * *

Owing to the fact that the Poultry Building is too small it has been decided to build an addition to take proper care of Brother Fike and his birds and to prevent blockades in "Hume" alley.

* * *

Hon. A. G. Murry failed to meet the International committee. However, we hope he will make, as usual, a good impression. Not so, Lyss?

Death To Lice

When an article like Lambert's Death to Lice Powder can meet the demands and successfully withstand the tests of over twenty-one years' use, under any and all conditions, and at the same time grow more popular with the buying public year after year, it is mighty good evidence that it possesses that subtle quality, that winning element which makes either men or material stand just enough higher above the rest to be considered the

STANDARD OF ALL.

Lambert's

Death to Lice

would not be the standard remedy it is if it did not do the work better, quicker, safer and surer than anything else. It has earned its reputation for ridding hens, hogs, sheep, cattle, dogs, henneries, etc., from the ravages of body lice by quick, thorough, effective work. It's user has the assurance of success—there's no chance for risk. Why waste time and money on cheap, ineffective, unknown powders? Why allow your sitting hens to be ruffled, feverish and discontented when "Death to Lice" will keep them cool, quiet and satisfied? The best is always the cheapest—that's Lambert's. A sample 10 cent box will tell. 100 oz. by express \$1.00. It has proved the turning point to profit for hundreds of poultry raisers. Why not for you? Lambert's Death to Lice Ointment for head lice on small chickens is equally effective. Sample 10c post paid.

Brother Shoreen no doubt found the man who ran off with his money.
* * *

We were sorry of not meeting our old friend Julius Fishel with his vermin-extminating fox terriers.
* * *

Hank Steinmesch came up from St. Louis and stayed only one hour to look over the Silvers.
* * *

Our "Uncle Ned" left too soon; had he stayed one day longer he would have captured several testimonials red hot from the stove.
* * *

Dave Heimlich was a busy man, scoring everything in sight, including Fishel's sweepstake hen.
* * *

U. R. Fishel used the "Potter system" on all his hens. Good for you, Ulysses; you are progressive.
* * *

Long Theodore was conspicuous by his absence; however, the short man, his former partner, was there doing business at the old stand.
* * *

Tom Potter was the talk of the show. Tom ought to go in partnership with Tom Lawson and make the two systems one.
* * *

Mack Pierce, Heimlich and Brinkama did some of the judging. The work was entirely satisfactory. Owing to their charitable disposition they did not present a bill for fees.

American Poultry Association Meeting.

Secretary Orr Reports the Sale of 6,812 Copies of the Standard—Columbian Wyandottes and Silver Penciled Plymouth Rocks Ask for Admission—Strong Committee Appointed to Secure Incorporation of Association by Act of Congress—Number of New Members Admitted—What was Said and Done.

Written by Thos. F. Rigg, Associate Editor A. P. J.

The American Poultry Association met in adjourned session at Hagerstown, Md., Thursday, October 12, President George D. Holden presiding.

Adjournment was taken until 7:30 p. m.

MEETING OF THE EXECUTIVE COMMITTEE.

The executive committee met at 3:30 p. m., Thursday, October 12, there being present the following named members of the committee: H. V. Crawford, George O. Brown, Charles McClave, Thos. F. Rigg, Eugene Sites, D. Lincoln Orr, Dr. T. S. Lee, August D. Arnold, T. F. McGrew, Geo. E. Howard. Also President Holden and Secretary Orr.

Secretary Orr presented the applications of the following named gentlemen for life membership:

George Spitzer, Lafayette, Ind.
J. D. Thiwing, Mitchell, S. D.
A. B. Todd, Vermillion, S. D.
C. A. Norton, St. Louis, Mo.
W. H. Vallsveet, Annapolis, Md.
M. M. Barger, Mt. Gilead, Ohio.
Charles Cramer, Sandusky, Ohio.
Frank W. Ashley, South Bend, Ind.
Thomas J. Foy, Cincinnati, Ohio.
A. E. Brooks, Cincinnati, Ohio.

Dr. N. B. Aldrich, Fall River, Mass.
J. P. Instone, New York, N. Y.
J. S. Porter, Atlanta, Ga.
Cincinnati Poultry & Pet Stock Association.

On motion of H. V. Crawford the applications were accepted and the applicants made members of the association.

Annual membership applications were received from the following named persons and presented by the secretary:

Dr. T. M. Scharlock, Charleston, S. C.
H. C. Haven, Stockbridge, Mass.
C. E. Cram, Carey, Ohio.
C. C. Reid, Delaware, Ohio.
S. M. Closs, Newark, Ohio.
H. W. Rehmyer, Shrewsbury, Pa.
Luella Swanson, Plymouth, Ill.
G. Manning, Cincinnati, Ohio.
S. J. Heffs, Akron, Ohio.
J. V. Hoople, Roanoke, Va.
E. E. Smith, Ashley, Ohio.
G. H. Allcorn, East Palestine, Ohio.
J. E. Gault, Sycamore, Ohio.
P. A. Spencer, Beckett, Mass.
F. W. Carey, Assiwing, N. Y.
C. N. Hansen, Warsaw, Ky.
Phillip Casswell, Neugit, R. I.
J. S. Orr, Augusta, Ky.
M. M. Miesse, Lancaster, Ohio.

THE LATEST IMPROVEMENTS IN ARTIFICIAL INCUBATION

Improvement is the order of the age.

There is no such thing as "perfection."

Neither is there such a thing as maintaining the same position all the time. We must go forward or backward on the measure of merit either in men or materials. In our business we have made greater strides forward this year than ever before; at any rate we are willing to let you be the judge of that after all the evidence and proofs have been placed before you.

In the past two or three months we have offered to the poultry fraternity some of our latest improvements in brooders, colony houses, etc., that have yet been advanced, and the avalanche of responses and sales we have obtained on these goods is the best kind of evidence we could have that our improvements in these lines are far ahead of anything ever offered.

But we have saved our highest achievement in improvements of apparatus for artificial incubation for announcement in this month's issue of the poultry press, and that is our

1906 STANDARD

Prairie State Incubator

It represents the greatest step forward in incubator making, and we are particularly enthusiastic over its development, simply because of the remarkable results it has produced in actual test under the most adverse conditions. We were satisfied what it would accomplish under favorable conditions but we wanted to know just what it would do under the most unfavorable conditions. To be plain, we wanted it to be proof against neglect or mistakes of the operator.

When we began our experiments for improving the Standard Prairie State we had a definite object in view. We determined, if possible, to make a machine anybody could run successfully anywhere. We started out to make a machine that would practically run itself; make it so automatic in action that error of operation, ignorance of operation, neglect, etc., would be no barrier, would be entirely overcome. To do this, meant it must be both simple and certain so that the novice would be on equal footing with the expert, and also that it require the least attention and care. Last but not least, it must produce the highest per cent of strong, vigorous chicks from every hatch, and we are pleased to say we succeeded. Better yet, we can say the Standard Prairie State Incubator will prove it in actual operation, because it has features found on no other incubator. For instance:

1. The self-elevator or automatic gravity heat distributor.
2. Self-adjusting or compensating thermostatic, automatic heat regulator, three times as sensitive as the old regulator.
3. Automatic ventilation.
4. Automatic moisture supply.
5. Large air space above and below the eggs.
6. Removable bottoms, making easy to clean.
7. Egg trays contain any size of eggs, hen, duck or Bantam, without change.
8. Large incubators have chick drawers.
9. The system of heating that gives the highest per cent of hatches.

NEW FEATURES

Not found on any other incubator

If you would avoid mistakes in your future incubator purchases, buy the **Standard Prairie State**. We have in press a circular fully describing and illustrating in detail the new features of this machine. They are so plainly described and illustrated that even the inexperienced can understand their merit and great advantages. Send us your name and address and as soon as we get this circular from the printer a copy will be mailed free. You ought to have it. If interested in the latest and most successful brooders, colony houses, etc., ask for descriptive circulars—they're free.

R. C. Tuttle, Hartford, Conn.

E. T. Losey, Huron, S. D.

George Fox, Philadelphia, Pa.

The applicants were duly elected members of the association.

Secretary Orr read a letter from a German publisher. The publisher asked to be allowed to print the Standard in German for circulation in Germany, and to copyright the Standard in Germany.

This brought up the question as to the matter of foreign copyright of the Standard.

T. F. McGrew said he thought perhaps it would be well to make a deal with this publisher if we could do so on favorable terms. This would protect the association in Germany, at least.

Geo. E. Howard advised that the association take out copyright in England, France, Spain, Russia and Italy. This would fully protect the association. German laws regarding foreign copyright are never executed. He advised that this action be taken at once.

Thos. F. Rigg: Supposing some very enterprising foreign publisher has already appropriated the contents of the new Standard to his own use, what can we, as an association, do about it?

Geo. E. Howard: In answer to Mr. Rigg will say then we are out. We could do nothing to protect our rights. We should have protected those rights, at the proper time, some time ago.

Secretary Orr: I am sorry Mr. Curtis is not here. The matter of foreign copyright was talked over at meeting of the Standard revision committee. It was Mr. Curtis' understanding that it would be too expensive to take out copyright in each of the foreign countries.

Geo. E. Howard: It would not be

expensive. It would not cost to exceed \$150.

Secretary Orr: I have here in my hand a copy of a book published by Dounahue & Co., entitled "Standard American Perfection Poultry Book." This is by J. K. Felch. It sells for 25 cents a copy. It purports to give the official Standard description of fowls. And this by one of our own members.

H. V. Crawford: I. K. Felch is no longer a member of the American Poultry Association. He resigned at the Rochester, N. Y., meeting, as I understand it.

T. F. McGrew: The true protection to the Standard is the loyalty of the poultrymen to the American Poultry Association. So long as members are true to the association we need not fear.

On motion of Mr. Rigg, the matter covered by the letter from Germany was referred to a committee of three, with instructions to report at the evening session.

The chair appointed Thos. F. Rigg, H. V. Crawford and T. E. Orr members of the committee.

H. V. Crawford: At the meeting this evening I shall move that steps be taken to incorporate the American Poultry Association under the laws of New York.

Geo. E. Howard: If incorporation be made under state law would it not be better to do so in either West Virginia or New Jersey? In my opinion we should incorporate a congressional enactment, thus making it operative in every state in the Union. This we can easily do and at no particular cost.

Eugene Sites: We are now in no shape to protect our rights as an association. We are only a wild cat association.

Secretary Orr: We have heard this

kind of talk regarding incorporation for years, and it has all ended in talk. The matter was urged by Mr. Kendall when he was president of the association, and he promised to take the matter up and push it through.

T. F. McGrew: He was out of office before he got around to it.

Geo. E. Howard: If we secure a national charter from congress we will be a lawful corporation; can sue and be sued; we will be subject to the laws of the state wherein we hold a meeting, at the time of the meeting. It will save us considerable expense annually to so incorporate, because if we incorporate under the laws of any given state we will have to pay a tax to that state annually, besides a heavy incorporation fee.

Adjourned.

EVENING SESSION.

President Holden presided.

The executive committee admitted Wm. G. Munich, Carlisle, Pa., and Geo. Burn, Tilsonburg, Canada, as members of the association.

The following members were present:

Geo. D. Holden, T. E. Orr, D. Lincoln Orr, Chas. McClave, Thos. F. Rigg, Aug. Arnold, F. D. Baerman, W. G. Minnich, Geo. Burn, H. H. Blackman, Dennis Shea, H. A. McAleer, Geo. O. Brown, W. C. Denny, Miller Purvis, D. P. Shove, E. Sites, Geo. Fox, F. W. Corey.

Secretary Orr reported action of executive committee in regard to applications for membership.

On motion of H. V. Crawford, seconded by W. C. Denny, the action of the committee was approved.

Thos. F. Rigg for the committee to whom was referred the request of a German publisher that he be allowed to print the Standard in German for

ARE YOUR HENS LAYING WELL RIGHT NOW

F. W. MANN CO., Box 56, Milford, Mass.

circulation in Germany reported as follows:

We, your committee, would report that the secretary be instructed to ascertain what amount the applicant will pay for the privilege desired; that his financial standing be ascertained of the secretary; that if the association furnishes him cuts as he desires payment for all such cuts must be made in advance.

D. Lincoln Orr: I would suggest to the committee that there be added to its report instruction to the secretary to report his findings to the meeting to be held in Cincinnati in January next.

Mr. Rigg: That is a good suggestion. The committee accepts the same and makes it a part of their report.

Report of committee was accepted and committee discharged.

H. V. Crawford: Dr. Kendall, president of the association at the time, was instructed to take up the matter of the incorporation of the American Poultry Association. The secretary should take up this matter. He seems to have forgotten all about it. It is necessary to incorporate. One reason why Mr. Bridge was allowed to go unpunished was because we were not incorporated and thus unable to act as we should in protection of our rights. I move that a committee, consisting of Geo. E. Howard and T. F. McGrew, of Washington, D. C., be appointed to proceed with the incorporation of the American Poultry Association. Motion seconded by W. C. Denny.

D. Lincoln Orr: Will Messrs. Howard and McGrew serve?

President Holden: They will. They so stated this afternoon.

The motion prevailed.

The legal notice for admission of Columbian Wyandottes to the Standard of Perfection was given. The notice was signed by Frank A. Ziner, Eugene Sites and J. D. Summers.

W. Theo. Whitman gave notice that he would apply for the admission to the Standard of Silver Penciled Plymouth Rocks at the regular meeting of the association next January.

The notices were accepted and placed on file.

H. V. Crawford: It is seldom I feel it necessary to make a personal statement, but there seems to be a general misunderstanding regarding the Bridge affair. At the Buffalo meeting of the association I attempted to examine the books of Mr. Bridge. As chairman of the finance committee I demanded his resignation as secretary-treasurer. He refused to comply with this demand. I said I would then ask for his removal. He then consented to resign, which he did at that meeting. We did not then know he was a defaulter. His books had been examined that year and said to be correct. This action of the committee, the committee which examined his books and pronounced them correct, relieved the bond company, in which the association held the Bridge bond of any liability. And I want to say here that the bond given by our present secretary-treasurer is not worth one cent.

Secretary Orr read a letter from the president of a leading poultry association asking which Standard would be in force in the show rooms this winter.

Mr. Crawford said that the new

Standard has, of course, superseded the old one.

The secretary: The writer of the letter I refer to wants to know if we have not power to compel this association to use the new Standard. The association has advertised that the old Standard shall be used.

Miller Purvis: We, as the American Poultry Association, have no authority in such a matter. I want to see the American Poultry Association place itself in such a position that it may legally govern all exhibitions held in this country.

President Holden: A judge who is loyal to the American Poultry Association will refuse to longer use the old Standard in his work of awarding prizes.

The secretary was instructed to draw a draft in the amount of \$33 and complete payment of bill for stenographic report of the Minneapolis meeting.

D. Lincoln Orr: I think we should revise our by-laws. We also have a burdensome executive committee. I tried hard to have the constitution and by-laws omitted from the issue of the new Standard, believing that the constitution and by-laws would be materially changed very soon.

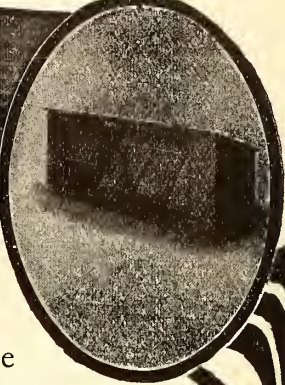

George O. Brown: This is not a representative meeting of the association. Let us wait until we secure such a meeting before discussing so important a matter.

D. Lincoln Orr: We are never able to secure a representative meeting of the association.

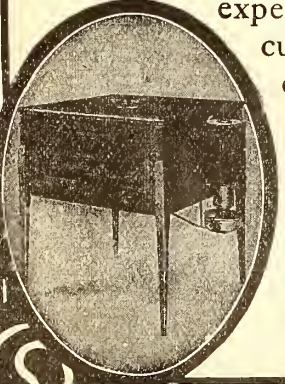

Eugene Sites: What about the errors in the new Standard? How are we to correct them?

Miller Purvis: Send each member of

Can I help you to mature your plans for next season's poultry work? Is your laying stock properly housed to remain healthy, and are your feeding methods such as to produce profitable results? Are you going to rear any winter Broilers or Roasters? There is money in this if handled right. I can tell you of methods that will produce profitable results. Simple methods that the beginner can follow with success, and methods that may help you—the experienced breeder. If at all in doubt on any point in poultry culture, tell me your plans and let me advise with you. If you contemplate the purchase of an incubator or brooder, do not fail to investigate the merits of the MODEL. They are high-class machines for practical work, and are guaranteed to give satisfaction. Catalog mailed upon request.

CHAS. A. CYPHERS
301 Henry Street, Buffalo, N. Y.

the association a copy of *Farm Poultry*.

Secretary Orr: On page 25 of the new Standard, in the section, referring to sweepstakes prizes the word "latter" is used instead of the word "former," thus handicapping the parti-colored birds instead of the solid colored specimens.

The Secretary was authorized to correct error.

The secretary reported that he had sold 6,812 copies of the Standard. There will be, he said, ample funds in the treasury to meet all bills as they are presented.

Thursday, January 18, 1906, was named as date of the regular meeting, which will be held in Cincinnati, Ohio.

A committee consisting of Geo. O. Brown, D. Lincoln Orr and Miller Purvis reported the following resolution, which was unanimously adopted:

Whereas, by the dispensation of Divine Providence our well loved brother member, John L. Cost, has been called from this life and

Whereas, His departure from among us is a great loss to the American Poultry Association, depriving it of the support and counsel of one who ever had its best interests at heart, be it

Resolved, That the American Poultry Association, assembled at Hagerstown, Md., this October 12, 1905, hereby expresses the deep grief of its members and their high appreciation of his merits, power for good and loyalty, feeling that the place left vacant by him will not easily be filled. Be it further resolved, that this action be spread on the minutes of the association and a copy thereof be transmitted by the secretary to Mrs. John L. Cost, with our sincere sympathy for her in her bereavement.

On motion of Miller Purvis the meeting adjourned.

THE CALIFORNIA PROMOTION COMMITTEE.

The following letter signed by Rufus P. Jennings and sent out from the State Central Organization of the California Promotion Committee with headquarters at San Francisco, will be of interest to our readers:

The California Promotion Committee, the State Central Organization, representing 152 commercial organizations in California, announces that there will be held in San Francisco in the coming December a great poultry exhibition, under the auspices of the California Poultry Association. Poultry associations throughout the Pacific Coast are united to make this exposition a great success, and it is the idea not to represent any particular town or place, but to show the importance of the industry upon the coast, and the necessity for increasing same.

I would be glad if you could publish this letter in your paper and state that this committee will be glad to answer any inquiries regarding this exhibition, and that the committee, furthermore, will appreciate exhibitors from eastern states sending their fowls and exhibits to the exhibition on this coast. It is proposed to make the exhibition not only the largest one of its kind ever held on the coast, but also the most unique and instructive, and to bring out the practical workings of the industry by demonstrations of operating poultry plants of all kinds as well as by exhibits. Large premiums and prizes will be offered, of a character to invite the most successful breeders throughout the country.

Amatite ROOFING

Send to-day for free sample

The best Ready Roofing for all purposes. Cheap, durable and sightly. Easy to lay, and wears longer than any other. The defects in others have been avoided—their good qualities improved.

To all who write at once we will send a free sample and booklet posting you on the roofing problem.

FEED THIS MUCH AT OUR RISK

THIS IS THE MONEY BACK LINE

Healthy Hens—More Eggs

Are you thoroughly satisfied with the results from your Hens and Chicks?
Are you getting as many Eggs as you should?
Are you getting Eggs when they're Scarce and Prices high?

Are your Fowls healthy and vigorous?

It's the FEED that brings Results, and we want you to try

PURINA POULTRY FEEDS

next time you buy, on our new selling plan—Results or No Pay.

There's a feed or combination for every purpose and for all seasons. Every one has been Tested, Tried and Proved until Perfect for the purpose before it was put on the market.

The great PURINA MILLS, "Where Purity is Paramount," have done all the testing for you, and have done it so thoroughly that every element of doubt, guesswork or uncertainty has been removed, and you can Feed with absolute certainty of getting the results you are looking for.

One kind saves the lives of Little Chicks—brings up highest percentage of every hatch to maturity in 60 to 90 days—healthy, vigorous and strong.

Other kinds and combinations—

Make EGGS—make it possible to secure every egg your Hens are capable of producing. Make sweet, tender, juicy FLESH—delicate and toothsome as a milk-fed capon. Make your fowls FAT for marketing in the shortest possible time.

Here is Our New Selling Plan.

Our ample Capital, immense Mills, and the Quality of our Feeds make it possible.

Purina Feeds are sold through Dealers in 100-lb. Bags. But to enable you to test them at our risk we have got up a Special 40-lb. Bag, with a "Money Back Line" one-quarter of the way down. We will send you four of these 40-lb. bags for \$4.00 either through your dealer or direct from the Purina Mills. If you order direct, you must give the name of the firm in your town from whom you usually buy your Poultry Feeds. Make your selections from this list.

Purina Mash to make hens lay

Purina Chick Feed

You may omit one or more of above feeds, if desired, and may order TWO BAGS, but not more, of any one item.

Purina Scratch Feed

Purina Alfalfa Meal

When the bags come, feed to the "Money Back Line" on each bag, and watch RESULTS. One Full Quarter of each bag is yours to try at our risk, without pledge or promise. If you are not thoroughly pleased in every way, just write us, and we will send back every penny of your money, freely and willingly, and tell you where to send the feed that's left at our expense. WE PAY FREIGHT BOTH WAYS.

If you would like to know more about Purina Feeds, FIRST ask us to send you the PURINA STANDARD POULTRY FEEDER. It's interesting, full of Poultry knowledge, and it's FREE.

THE HAGERSTOWN SHOW.

The Pathway a Few Fanciers Broke to the Doorway of John L. Cost
Now a Great Public Highway, Traveled by Hundreds of Farmers
from Every State in the Union and of Canada—4,700 Head of
Poultry Shown this Year—A Great Social Function.

Written by Thos. F. Rigg, Associate Editor A. P. J.

The great Hagerstown show of 1905 has come and gone. There is but one Hagerstown poultry show. There is not another like it. It is doubtful if it is possible to duplicate it in America. This exhibit has an individuality and a character all its own. It is the product of work and sentiment. Conditions existing at Hagerstown are not to be found elsewhere. There is romance and glamour surrounding and influencing the management of this exhibition. It is held in a locality in beautiful Maryland where the people are far enough north to be somewhat influenced by the spirit of commercialism, and near enough to all that is generous and noble and kind in the nature of the people of the south.

For fifty years the Hagerstown fair has been a fixture. The fathers and mothers, the grandfathers and grandmothers of many of the present day, residents of Washington County, Maryland, were identified with the fair management, or knew it as their source of recreation when the fall's work in the fields was done.

This fair is a magnet which draws thousands of people from Maryland, Virginia and Pennsylvania every October. Everybody pulls for the Hagerstown fair. There has never been any strife or contention in the management. This is not as it usually is in the management of such enterprises, but in this, as in other particulars, the difference is marked.

As a social function this fair is not approached by any other fall exhibition. An eminent author has said "Be true, and the world will break a pathway to your door." Fanciers found John L. Cost true in all his dealings with them and they broke the pathway to the door of the Hagerstown fair. Since then that pathway has become a great public highway and is now annually tread by hundreds of fanciers and exhibitors from every state in the union and from Canada on the north.

Four thousand two hundred entries of poultry, and nearly all high class stock shown by representative fanciers. That is a proud position for an exhibition to hold, surely.

The awards were placed by J. H. Drevstedt, Geo. O. Brown, D. A. Nichols, Chas. McClave, Wm. Stanton and Fred Crangel.

THE EXHIBITORS.

Rock Hill Poultry Farm, Ossining, N. Y.; G. W. Moody, South Montrose, Pa.; B. F. Jones, South Montrose, Pa.; Harry E. Bair, Hanover, Pa.; Henry Tieman, Baltimore; J. W. Mitchell, Canisteo, N. UP AND DOWN THE AISLES.

Well done, W. Frank Spahr!
As a toastmaster Tom McGrew takes all the prizes.

F. D. Baerman was present, pleading the cause of the American Reds. We think Mr. Baerman is taking this matter altogether too seriously.

We heard but little A. P. A. politics talked. Eugene Sites, of Ohio, announced his candidacy for president.

Geo. L. Harding, of Binghamton, N. Y., was a short time visitor at the fair. Uncle Sam's poultry foods and remedies are very popular, everywhere, especially in the east. They are made on honor. Geo. L. Harding would stand for nothing else in the conduct of his business affairs.

H. V. Crawford, secretary of the great New York Madison Square Society show, was present during the week. Mr. Crawford says there will be a particularly strong class of Barred Rock at the Garden in January. The Rock Club has put up \$300 in special prizes and the New York show management has added \$50 thereto. Dan Lambert and Henry Schaub will place the awards.

A. L. Sparks, better known as Ivory Soap Special Sparks, was 65 years of age one day of the show. We hope the deacon can make it 65 years more.

D. Lincoln Orr, ex-president and ex-secretary-treasurer of the American

MICA CRYSTAL GRIT DOES THE WORK

It is no experiment, having been used successfully for twelve years and is the highest grade article of its kind in use.

Necessary proportion of mica, quartz, iron, magnesium.

Regulates digestion by properly assimilating the food, a process absolutely necessary to health and productiveness in poultry.

Food not assimilated is food wasted. Mica Crystal solves the problem and makes the poultry industry profitable.

Without grit the feathered tribe cannot be healthy or productive. This is a well demonstrated fact in nature. Ignorance of it has cost millions. Grit is to fowls what teeth are to other members of animal creation. Mica Crystal never loses its sharpness, it is the best.

Let us prove the truth of what we say by filling a sample order for you.

DARLING & CO., Agents,
Chicago, Ill.

Poultry Association, was present during the week and kept busy answering the greetings of his many friends.

A great many fanciers inquired of the writer as to the whereabouts of Fred L. Kimmey. They had expected and hoped to meet him during the week. An A. P. A. meeting without Mr. Kimmey's pleasing personality and wise counsel seemed incomplete.

Tom Orr had a very busy week of it. He judged the cattle and the sheep, arranged for and attended the meeting of the American Poultry Association, besides being in evidence at banquet and other meetings.

Miller Purvis ably represented Illinois. There is only one Miller Purvis.

Geo. E. Howard of the *Feather*, the *American Fancier* and the Howard Publishing Company, Washington, D. C., spent a day at the fair. Those who know say that a short time ago George nailed a contract to print labels for Uncle Sam that is fast making him (not Uncle Sam) a bloated bondholder. We hope it is true. There is no man in the world who deserves success in big chunks more than Geo. E. Howard.

Daniel P. Shove of Fall River, Mass., was a guest of honor all week. Mr. Shove is one of the best friends of the Rhode Island Reds and will be at Cincinnati to see to it that the injustice done the Rose Combs at Minneapolis is not perpetuated. There will be other good friends of the Rose Combs there, too. Mr. Shove showed his Reds and Houdans at Hagerstown and, as usual, was in the winnings.

We had the pleasure of meeting Lee Pitchlynn and Miss Sophia Pitchlynn of Washington, D. C. They had S. C. Brown Leghorns and Barred Rocks on exhibition. The first prize hen went to these enjoyable people. As Mr. Pitchlynn says, all honor is due to Miss Pitchlynn, who cares for the stock. Let us here recite a fact, which shows how much of an expert at poultry raising she is: On April 7 she took a brood of chicks from the nest. The pullets were laying August 22. In November she set some of these pullets' eggs. In two months from the time chicks were hatched from these eggs they weighed two pounds each. This record was made with Barred Rocks. If a poultryman had accomplished these results he would have proclaimed it from the housetops.

W. H. Overbaugh, Hanover, Pa., showed a string of magnificent White Rocks. Before the awards were placed he sold the first cockerel to F. W. Corey of the Rock Hill Poultry Farm, Ossining, N. Y. Mr. Overbaugh is a fancier through and through and knows how to produce the best. His word is as good as a bond and his customers always get the best of treatment.

Au. D. Arnold showed a string of his Columbian Wyandottes. The celebrated cock bird Teddy, the New York winner, was shown in the string. He is a magnificent specimen of this now very popular breed. Mr. Arnold has a very large flock of these birds, many of them being sired by Teddy.

T. E. Orr showed his Wyandottes, all varieties, and Buff Orpingtons. He won his share of prizes, as he always does.

The exhibitor who had cause to be most proud is F. W. Corey, manager of Rock Hill Poultry Farm, Ossining, N. Y. He made the wonderful record of taking about all the desirable prizes in White

MONEY-SAVING POULTRY SUPPLIES

MAKE YOUR PROFITS LARGER

Cheap and inferior goods will never pay you. We have the best selected stock of supplies in America. Jewel Chick Feed is fast taking the place of all other grain food. It does the work. American Poultry Journal Pub. Co.
325 Dearborn St., Chicago, Ill.

Wyandottes in very warm competition. In this class he won 1-4 cock, 1 hen, 1 cockerel, 1 pullet, 2-4 pen. His other winnings were: White Rocks, 3 cock, 4-5 hen, 1 cock, 5 pullet, 1-2-3 pen. S. C. W. Leghorns, 1 cock, 2 pullet. Buff Cochins Bantams, 1 cock, 2 cockerel, 1 pullet, 1-2 pen. On Partridge Wyandottes, first and second cockerels; second and third pullet; fourth, hen and second pen; Ivory Soap special for best white bird in the show; special for best Leghorn in the show, any variety; special for best Plymouth Rock in the show, any variety; also special for best White Wyandotte cock, hen, cockerel and pullet. Mr. Corey is an experienced breeder and Rock Hill Farm is to be congratulated on securing his services. He will make it a quality poultry farm—not quantity.

Eugene Sites, Elyria, Ohio, was one of the heavy exhibitors. As is his custom he showed a number of the winners. We think the winnings which pleased him the most were his victories in the Partridge Wyandotte contest. When we say that Eugene Sites is all right we state a fact known to all poultrymen.

Chas. T. Corrman, Carlisle, Pa., had some Bantams, game and other varieties, of extra good quality on exhibition. Mr. Corrman has the largest Bantam plant in the world, and his record as a breeder and exhibitor is second to none.

Charles McClave worked hard and faithfully, as is his custom when placing awards. In the Barred Rock classes he found some knotty problems, but brought them out, his work being endorsed by all the exhibitors. Mr. McClave was a large exhibitor, winning many prizes.

J. H. Drevenstedt was there, of course. Hagerstown show without kindly, genial and loyal "Drev" would not be half so enjoyable. We do not think there is another page in poultry journalism that is read with as much interest by the real, true fanciers as is the notes under the line "From the Editor's Perch" in the *American Fancier*. There is a pleasing individuality, a ring of truth and high ideal that makes it so interesting to all men having the fancier's spirit within them.

W. C. Denny represented the Cornell Incubator and Peep-of-Day brooders. Denny sheds a ray of sunshine wherever he goes. And he knows how to sell machines.

T. F. McGrew, who knows more fanciers and is by more fanciers known than any other man, was with the throng until Friday.

Geo. O. Brown, one of the patriarchs of the order, still an enthusiast where good poultry is concerned, judged a number of the important classes to the entire satisfaction of all concerned. Mr. Brown has a beautiful farm near Baltimore, where he brings forth extra good Barred and White Rocks.

Hon. D. A. Nichols, the most competent Cochins judge in all America—or elsewhere—royal good fellow and on-the-square always, came early and remained till late.

Billy Stanton, in company with "Drev," did not propose the value of a winning at Hagerstown should be depreciated. Hence those tears.

Before the banquet the usual parade took place, over 200 fanciers being in line. There were two divisions, one being in charge of W. C. Denny, Ithaca, N. Y., and one in charge of N. B. Warner, Lincoln, Va. The paraders wore

In order to properly handle our rapidly growing Eastern trade, we have established

A New York Factory

For the Manufacture of Darling's High Protein Poultry Products.

We desire to express our appreciation for the generous patronage in the Eastern and New England States that has made this new factory necessary. The high character of the Darling products will be sustained. With an Eastern factory for Eastern customers we shall be able in future to give this trade the prompt and careful attention its importance deserves. Our catalog, enlarged and improved, just off the press, is mailed free. Poultrymen need it. Send to either of the following addresses:

DARLING & COMPANY,

Box C, Long Island City, New York.

Box C, Union Stock Yards, Chicago.

A GOOD POULTRY HOUSE

is a necessity. Morgan's Sanitary Houses in size, style and price are the best and cheapest houses on the market. Built right, arranged right, sold right. New illustrated catalog. Address

Box 1

SANITARY PORTABLE HOUSE CO., Lemont, Illinois.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 18 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

The greatest success results from concentrating all efforts upon one line.

Three-fourths of the farmers waste a third of their feed given to hogs because they do not understand the best methods.

The American Swineherd teaches you how to be successful.

How to secure the greatest profits.

How to feed, to double the growth and gain over usual methods.

How to keep your hogs healthy, as only healthy ones are profitable.

How to get 18 pounds of pork out of a bushel of corn, and 20 pounds out of a bushel of wheat, fed to hogs.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader on feeding."

One man writes: "A single instructive lesson in the Handbook on Hog Hygiene saved me \$50 in feeding a bunch of 40 hogs 60 days over the ordinary way of feeding. It is the best investment I ever made."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' subscription to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition

"The Pig Feeders' Manual," worth a \$1 itself.

This equips you for a successful hog business.

AMERICAN SWINEHERD

Como Bldg., Chicago, Ill.

white caps and yellow satin ribbons, with silver chickens, and carried canes cut from Antietam battlefield.

J. Fred Crangel of Valley Farm was on the judges roll as usual. Fred is so busy at home with polo ponies and Russian wolf hounds that the poultry at Valley Farm is in retirement at present, but will soon be brought out. It is always a pleasure to meet Crangel.

Here is a good thing. D. Lincoln Orr was among the notables who rode in a carriage in the parade. It was a cold, rainy day and Link criticised the driver for not having a laprobe. "Young man," said the driver, "I drove a carriage in this parade a year ago and had to pay for a lost robe." What did Link say? Well. What?

Chas. A. Cyphers had a line of his incubators and brooders and foods on display.

C. P. Nettleton and the writer had a very pleasant visit, that is, it was very pleasant so far as we were concerned. Mr. Nettleton admitted to us that there were some good Light Brahmas in the west, and we admitted that all eastern Brahmas are not Cochranized.

President Geo. D. Holden found all the eastern fanciers present pleased to make his acquaintance, and to wish him well. George broke the long distance record, coming through without stop from Portland, Ore., that he might preside at the A. P. A. meeting.

Think of Tom Orr and C. P. Nettleton occupying the same bed. Ye gods, that is something to wonder at.

W. Frank Spahr, upon whose shoulders the greater part of the work of making the Hagerstown show a success fell, received the congratulations of all exhibitors and visiting fanciers. Mr. Spahr has grown up in connection with the Hagerstown show fair, being near the management for many years. His father and brother were exhibitors there many years ago. His father and the late John L. Cost were known as "the two Johns." Frank came to the fair first as a boy seeing the sights, next as an exhibitor, then assistant cooper. Later John L. Cost took him into the office. Upon the death of Mr. Cost Frank took entire charge of the office work and management of the show.

Geo. Fox of Torresdale, Philadelphia, Pa., made a good showing in Buff Rocks.

A party composed of H. V. Crawford, D. Lincoln Orr, Miller Purvis and Thos. F. Rigg and wife made a trip over the battlefield of Gettysburg. Mr. Crawford had been there before—during the

days when this great and important battle was raging. He knew as well as the professional guide the party employed, every spot on the field and the movements of the troops on either side during those awful three days of carnage. The other members of the party considered themselves as being especially fortunate in having the privilege to make the visit with Mr. Crawford. The schoolboy who hid his books and run away to war was a brave and honorable soldier. He was less than 21 years of age when he left the service of his country, having been a soldier several years.

Friends of the late John L. Cost have presented Mrs. Cost with a beautiful memorial cup. During the week Mrs. Cost received several beautiful floral pieces, the gift of friends of her departed husband.

Four thousand two hundred head of poultry and pigeons. There is but one Hagerstown fair.

The Columbian Wyandotte germs are in the air. It seemed as though nearly every eastern breeder we talked with was afflicted with the desire to get hold of some Columbian Wyandottes. We guess we told the truth more than a year ago when we said there was sure to be something doing in Columbian Wyandottes.

A large number of the boys would like to get a peep at the specimens of that new breed Brother Wycoff is keeping in hiding.

"Great show they are having at Hagerstown this week," remarked a stranger to H. V. Crawford on the train bound for Gettysburg. "Very great," replied the gentleman from New York and New Jersey. "Yes," said the stranger, "Hagerstown is headquarters for good poultry in America. More fowls shown there every year than at any other show in this country or Canada. And better ones, too. Why, the New York show looks like 30 cents in comparison to this show. Have you ever seen the New York show?" Right here the talkative stranger noticed something in the piercing eyes of the man he was addressing which warned him that he had better stop talking. He did so. As we were leaving the car he inquired of the writer as to the name of the man he had talked to. "That is Mr. H. V. Crawford, secretary of the great New York show," we replied. "The —," exclaimed the Marylander as he hurriedly alighted from the car.

The last we saw of Miller Purvis was at Weaverton up in the mountains. We had bid him good-bye at Hagerstown.

Rock Hill Poultry Farm

OSSINING, : NEW YORK

White and Silver Penciled Plymouth Rocks, White and Partridge Wyandottes, White Leghorns and Buff Cochins Bantams

A record of 41 first, 36 second and third prizes at Syracuse and Hagerstown, together with eight of the best specials given at the latter show; namely: Silver Cup for best white bird in the show; specials for best Leghorn, Plymouth Rock and Wyandotte, any variety, in the show, and specials for best White Wyandotte Cock, Hen, Cockerel and Pullet proves our Stock to be the best. **High-Class Birds For Sale. Eggs in Season.**

First Prize Hagerstown; special for best white bird in the show; special for best Wyandotte, any variety; special for best White Wyandotte Pullet.

depot, where he was to take a train north, we going south. When we got off the train at Weaverton there was Purvis. "What are you doing here and where are you going?" we asked while on the run to catch a train waiting for us. "Don't know," came back the answer from Purvis.

Next show—next October—will be the fifty-first anniversary of the Hagerstown fair. May we all meet there again.

THE BANQUET.

The banquet which is always tendered to the visiting poultrymen by the fair association was held Wednesday night. More than 150 guests were seated at the tables. A table, made in V-shape, fully occupied the large dining room of the Hamilton house.

Seated at the head of the table were Senator B. A. Betts, superintendent of Hagerstown fair; Miller Purvis, Peotone, Ill., editor of *Poultry*; T. F. McGrew and George E. Howard, of Washington, editors of the *Feather*; D. Lincoln Orr, ex-president of the American Poultry Association, of Orr's Mills, N. Y.; T. E. Orr, secretary of the American Poultry Association, of Beaver, Pa.; Thomas F. Rigg, Iowa Falls, Iowa, associate editor of the AMERICAN POULTRY JOURNAL; Charles McClave, ex-president of the A. P. A., of New London, Ohio; Judge George O. Brown, of Baltimore; Judge Dr. Steven T. Lea, Charleston, S. C.; W. Frank Spahr, superintendent of poultry, and D. H. Staley, of Hagerstown.

Colonel Schley, on behalf of the fair association, delivered the address of welcome. Colonel Schley commented on the shortness of life and the suddenness of death, and said that soon after death it is the lot of almost every man to be forgotten. But it is not so with one who at one time was the chief among poultrymen. He closed by saying that so long as those present shall live and so long as the Hagerstown Poultry Show shall be a success, so long will the memory of the late John L. Cost continue to be as fragrant and fresh as the grass upon the green hills of our country. He then proposed that a silver toast be drank standing in honor of the departed officer.

T. F. McGrew, of Washington, acted as toastmaster.

Toasts were responded to as follows:

"Growth of the Fancy," T. E. Orr, Beaver, Pa.

"Iowa and the West," Thos. F. Rigg, Iowa Falls, Iowa.

"The Empire State," D. Lincoln Orr, Orr's Mills, N. Y.

"The South," Dr. T. S. Lee, Columbia, S. C.

"The Wooden Hen," W. C. Denny, Ithaca, N. Y.

The memorial address was delivered by Miller Purvis, as follows:

"I think all of us who have foregathered here from year to year have the same feeling tonight. To himself each one of us saying:

"Oh, for the touch of a vanished hand
The sound of a voice that is still."

"The clasp of a hand the warm touch of which ever made us feel the strong bond of brotherhood which existed between us and the one whose place tonight is occupied by a vacant chair, the sound of a voice which always spoke words of welcome, good cheer and the joy of living.

"He was one of those to whom we refer as the Old Guard. One of those who laid the foundation upon which was built the splendid industry which brings us here. We speak of them almost with reverence. One by one, time, which is relentless, brings them to the parting of the ways. One by one they pass the gate of the Great Mystery and come back to us no more forever. For them the hands on the great dial of time stands still and after life's fitful fever dream they rest well.

"I stand here tonight feeling that it is a great honor to have been chosen to speak in praise of him for whom we mourn.

"Without sacrificing his principles he died the friend of the whole world, because he was first generous and then just.

"The life of a man is not valuable because of what he may have done in the way of winning fame or piling up wealth. The efforts of the life of any man must be measured by the memories he leaves behind him, the currents he sets in motion and their effect on those with whom they come in contact. Judged by this criterion our dead friend lived a well rounded life, to him came gospel measure of success, heaped up, pressed down and running over.

"In every walk in life he did his whole duty and did it well. As soldier or civilian, as a private man of business, or as a public servant, whatever his hand was set to do he did thoroughly and in a way to command respect and admiration.

"He was one of God's noblemen. Earnest, sincere, unostentatious, loyal to his friends and direct in his methods he was, in the highest and best sense of the word, a man.

"A man of sorrows his voice was never lifted to bewail his condition or misfortunes. Death had treated him cruelly by taking away from him those whom he loved with a depth of feeling and a tenderness which few of us

suspected. He seemed to feel that yonder were the Hilltops of Hope, whose height he might sometime win.

"I think I may say without boasting that I was one among his closest friends. He talked to me freely about his own interests and those in which we were mutually interested. In all the years I knew him I never heard him utter a single solitary word that even hinted at malice or ill will.

"When my time comes
'To wrap about me the draperies of my couch,
And lie down to pleasant dreams,'

"I ask no grander monument than that I may leave behind me as many pleasant memories, as many sorrowing friends as were left behind John L. Cost when peacefully he fell asleep.

"May his memory remain green as long as the blue hills of Maryland he loved so well lift their tops heavenward, as long as the stars swing in their courses, as long as the waters of the rivers seek the sea."

In closing, Toastmaster McGrew said: "May God be as just, as kind and as generous to John L. Cost as he was to all men."

COSTLY FISHING CLUB.

A committee of the Costly Fishing Club, composed of Senator D. A. Nichols, J. H. Drevenstedt, J. Fred Crangle and George O. Brown, met and arranged with a florist for an elaborate and beautiful floral design, which was placed on the grave of their honored dead—John L. Cost.

A special meeting of the club was held and the following resolutions adopted:

"Whereas, our esteemed president, John L. Cost, died in April, 1905,

"Resolved, That the club, out of respect to his memory, do hereby disband.

DAVID A. NICHOLS,
H. V. CRAWFORD,
J. H. DREVENSTEDT,
J. F. CRANGLE,
A. L. SPARKS,
CHARLES F. CORNMAN,
T. T. MCGREW,
D. LINCOLN ORR,

Committee.

The club was made up of men prominent in the poultry world, and was organized for purely social purposes, a banquet being held by the club in New York each year. Since the death of Mr. Cost, after whom the club was named, the members felt that they would not care to continue the association longer, and thought that the most suitable place at which to disband was in the home town of the departed member for whom their club was named.

Neat Booklets in one or more colors, Catalogues, Circulars, Letter Heads, Business Cards, Blanks, Show Supplies, Half-tones, Etchings, Wood Engravings, Electrotyping. Write for a free sample sketched of letter head. Special attention given to printing for poultrymen.

GEO. H. HERALD, PRINTING

AN INCUBATOR TRIUMPH

**SUCH AS NEVER BEFORE HAS BEEN ACHIEVED
IN THE HISTORY OF THE ART OF INCUBATION.**

Story of the 1906 Pattern Standard Cyphers, telling how the Cyphers

**The 1906 Pattern
Standard Cyphers.**

What would you think if some one were to tell you that the Cyphers Incubator Co., within the short period of two years, had improved its standard incubators to so great an extent that the leading poultrymen of this country are to-day **practically unanimous** in pronouncing it to be "the most perfect hatching machine ever devised by human ingenuity and skill?"

That is precisely what has been done, and it will be our pleasure to prove this claim to the satisfaction of all persons who read the series of advertisements of which this is **NUMBER ONE.**

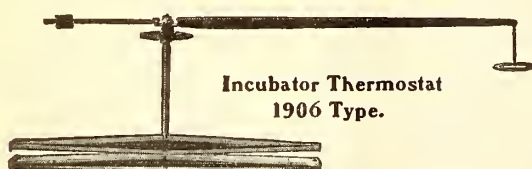

We dare say you've heard about the Cyphers Incubator.

Most people have who read poultry papers.

It may be, therefore, that you have knowledge of the fact that thousands of poultrymen, including the most experienced and expert operators of incubators in this and foreign lands, have repeatedly declared their belief—based on conviction—that the genuine Standard Cyphers Incubators, for years past, have been the best hatching machines on the world's markets.

Times without number in the history of the art, incubator and brooder manufacturers—experienced men at that—have made changes in their machines, acting in good faith, but without taking the proper precaution to make absolutely sure that the changes were in fact improvements.

Placing untried goods on the market is both unwise and unfair. It is unwise from the point of financial investment, because the individual or company that does this will be called on to replace the defective or worthless articles, and it is unfair for the reason that the buyers of such goods will be disappointed and injured. Nor will their loss ever be made good. The defective articles may be replaced, but this does not restore lost opportunities.

**Incubator Thermostat
1906 Type.**

MAKING ABSOLUTELY SURE: It was for the foregoing reasons that the Cyphers Incubator Company, even after its officers became convinced, as a result of carefully conducted experiments, that several well considered additions to its standard incubators were valuable aids to incubation, nevertheless decided to subject the new patterns to a decisive test in all parts of the United States and Canada, before offering them for sale.

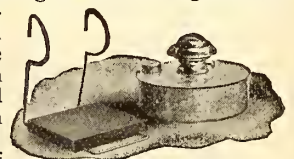

Incubator Company, after two years of investigation and experimenting, constructed 250 new-pattern machines, then, instead of offering them, untried, to the buying public, secured abundant and absolute proof of their superior hatching qualities by having them tested in all parts of the U. S. and Canada.

We realized, too, that extreme care should be exercised in seeking to improve the old style Cyphers, which has excelled in hatching records all other makes of incubators, both in this country and Europe. Thousands of poultry raisers have pronounced it practically perfect, basing their opinion on its work as compared with that of other types of incubators. Nevertheless, it was our belief that the machine could be improved, and neither time nor money was spared in the effort.

PUT TO THE TEST: After working a year and a half on lines as above indicated, we manufactured during the latter part of April, 1905, 250 of what we styled the **1906 pattern Standard Cyphers Incubators**, embodying in their construction the various improvements we believed should be made, and then more than 225 of these new pattern machines were shipped by us to well known poultrymen and experienced operators located in widely distant sections of the country, to some near the seacoast, to others in the central west, to others in northern latitudes, to others in the southern states and to still others located at high altitudes, in mountainous regions. We were determined to have the new style machines tested by actual use in every latitude where incubators can be successfully operated.

In sending out the 1906 pattern Standard Cyphers Incubators to be tested throughout the United States and Canada, we did not select solely such poultrymen as were customers of this company, but included a considerable number whom we knew had been using incubators during many years, and regardless of what make of incubators they were using. **Invariably we selected men whose names in the poultry business are synonymous with integrity and reliability.** In our opinion not one of these men would make a false report or lend his name to purposes of deception, either directly or indirectly.

TAKING LONG CHANCES: We fully understood, at the time we sent out these machines, that it was late in the season, and that therefore we were taking long chances as regards satisfactory results. If the reports received of the trial hatches had ranged from 70 to 80 per cent of the fertile eggs, we would have been satisfied. The readers may well imagine, therefore, our gratification when report after report came in, representing practically all parts of the country, telling of 85, 90, 95 and 100 per cent hatches made with the new pattern machine in the hot weather of June, July and August, after the fowls had been laying all spring, and at the time when fertility was low and the germs were weak. These reports, **exactly as received by us**, and representing practically every State in the Union, from the Atlantic seaboard to Colorado, and from Canada to the Gulf States, will appear in our 1906 catalogue, and as many of them as practicable will be published in the series of advertisements, of which this is **NUMBER ONE.**

New Lamp Support.

Improvements In 1906 Pattern Standard Cyphers Incubators.

(Five New Patents Pending.)

The improvements made by us in the Standard Cyphers Incubators, and what we claim for them, briefly stated, are as follows:

1. Increased cubic capacity of hatching chamber, giving a greater volume of air and supplying more oxygen to the developing chick embryo.

2. Drop or hinged bottom to all Standard machines (Nos. 0, 1, 2 and 3) which, when let down, exposes the entire lower felt diaphragm, thus securing greater elasticity of ventilation, thereby adapting these machines to a far wider latitude in range of temperature.

3. Self-elevating nursery drawers (in the Nos. 2 and 3 Standard machines) for the reception of chicks and ducklings first to hatch and for use, as carrying boxes for transporting the chicks and ducklings to the brooders or brooding house.

4. Staggered ventilating holes in drop bottom, which break up and diffuse the circulation of air to a beneficial extent.

5. Improved toggle lever thermostat, by the use of which one-fifth of a degree of change in temperature in the hatching chamber will open the heat damper to an extent sufficient to control the heat.

6. Lock-nut at bottom of connecting rod that attaches the thermostat to the regulator arm, which renders it impossible for the nut to fall off or the connecting rod to work loose.

Improved Heater.

7. Double removable top diaphragms, so constructed that the thermostat (which is properly placed and adjusted at the factory) need not be removed nor interfered with at any time, for any purpose.

8. Fine texture fabric used for upper diaphragm, which permits the heat to pass through more readily into the hatching chamber, resulting in a saving of 15 to 20 per cent of oil.

9. Sloping or "dished" egg-trays, (in the No. 0 and No. 1 Standards and in the Farm Economy and Boy's Choice Incubators) i. e., trays which slope to the center from all points of the tray, thus assisting to equalize the temperature on a level with the top surface of the eggs in these small, sized machines. The "inclined" (sloping) trays are retained in the Nos. 2, and 3 Standards.

10. "Split" or double lower diaphragm, which can be removed, washed, aired, replaced and the space between the burlap and felt readily cleaned.

11. Removable wire screen frames which protect the interior of the Nos. 2 and 3 Standard Incubators when the drop bottoms are let down and that can be taken out at will when it is desired to clean these large-sized, deep-bodied machines.

12. Ease of access through open bottoms of Nos. 2 and 3 Standard machines for purpose of cleaning after a hatch, or at end of hatching season.

13. Special top and side ventilators for drying off ducklings, which makes these machines combination hen-egg and duck-egg incubators, rendering unnecessary the purchase of "special duck" incubators.

14. Patented gravity chick guard, which automatically prevents the chicks or ducklings in the nursery drawers from being injured when the drawer covers are pushed into place and the drawers are withdrawn.

15. Adjustable, safety lamp support, instantly attachable without the use of nails, screws, bolts or other fastenings.

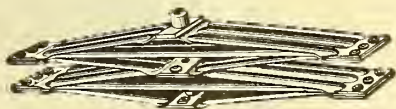

16. Guide ring on lamp burner, which renders it impossible to misplace lamp.

17. Black enameled metal cap and metal band for heater, which protect the asbestos heater jacket and add greatly to the durability and appearance of heater.

18. Removable mica on heater, so that it can be taken out to be cleaned, or can be replaced if broken.

Absolute and Abundant Proof.

Month by month we shall present in this series of advertisements absolute and abundant proof of every claim made in the foregoing tabulation. This proof will appear in the form of reports of test hatches as made with the 1906 pattern Standard Cyphers Incubators in all parts of this country and Canada, by foremost fanciers, by the proprietors and managers of the largest and most successful poultry plants in America, and by professors of agriculture and poultry husbandry on the government experiment stations of the United States and Canada.

The Essex Thermostat for Brooders.

Cyphers Incubator Company is carefully testing two types of self-regulating outdoor brooders that embody different principles of heating—radiation and "diffusion," upon which applications for patents have been made. In keeping with our practice, neither of these brooders will be placed on the market until we have thoroughly satisfied ourselves that they are practical and trustworthy. Thus far manufacturers of brooders have not been successful in constructing a dependable, self-regulating outdoor brooder. Realizing that outdoor brooders of this description will be judged on their merits as a self-regulating device, we shall not offer these brooders for sale until we have tried them throughout an entire season at our experimental rooms, and on our poultry farm, and even then not until they have been tested for us, in large numbers, by careful poultrymen located in different parts of the country, as we did in the case of our 1906-pattern incubators. The above illustrated thermostat has been invented for use in the Cyphers Company's self-regulating outdoor brooders.

TWO SAMPLE REPORTS.

Following are two sample reports, telling of the sensational work performed by this latest triumph of American invention:

MONARCH INCUBATOR

JAMES RANKIN, Proprietor.

SOUTH EASTON, MASS., June 21, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

Gentlemen:—The two Incubators you sent me arrived in good shape, and I was surprised at the great improvement over the old style. The deepened egg chamber, the increased ventilation and the nursery drawers for the reception of the ducklings, ARE ALL GREAT IMPROVEMENTS, and though the machines arrived rather late in the season for our work, I was so anxious to test their merits that I set one up and filled it with duck eggs, filling one of our 600-egg Monarchs at the same time. The eggs were from the same yards. The machines were operated in the same room and BY MYSELF, as I wished to make AS FAIR A TEST AS POSSIBLE.

I was a little surprised at the result, as the Cyphers hatched fully as well as the Monarch, an admission I HAVE NEVER BEFORE been willing to make for any other machine ever manufactured. In fact, THE CYPHERS CAME OUT TWO AND ONE-HALF PER CENT AHEAD, with as fine a lot of ducklings as I ever saw.

I was very much pleased with the working of the Cyphers. THE REGULATION IS PERFECTION ITSELF, leaving nothing to be desired, and I congratulate you on putting out an incubator that the public can depend upon to do their work in the best possible manner.

Yours truly,

James Rankin

UNITED STATES OF AMERICA.

Scotch Plains, N. J., July 7, 1905.

Cyphers Incubator Co., Buffalo, N. Y.

Dear Sir:—It is with great pleasure that we announce the splendid results obtained from your 1906-pattern Standard Cyphers Incubator (360-egg size).

THREE HUNDRED AND SIXTY EGGS were placed in the incubator. Sixty proved infertile at first test and two at second test, leaving 298 good eggs, out of which 282 HEALTHY CHICKS WERE OBTAINED (a 94 2/3 per cent. hatch).

We have never seen a quicker hatch; it was only six hours from the time the first chick was out to the last. The temperature of the incubator DID NOT VARY A DEGREE, being run at 103 degrees ALL THE TIME. The ventilators were closed to start, being gradually opened daily until the 15th day, when they were wide open.

We consider this machine THE FINEST WE HAVE EVER RUN, and shall take pleasure in recommending it to our customers. The hatch came off on June 24, and thus being so late in the season was a severe test for an incubator. THERE IS NO DOUBT IN OUR MINDS and we speak from years of experience with many makes of incubators in this and other countries THAT THE 1906 PATTERN OF THE STANDARD CYPHERS IS THE BEST IN THE WORLD IN BOTH APPEARANCE AND USEFULNESS.

Wishing you every success, Faithfully yours,

Wm Cook & Sons

"The Machine" of Profitable Hatches."

If you, reader, are thinking of buying an incubator, and want what the most successful poultrymen have declared to be by odds the most perfect hatching machine invented, kindly send your name and address and we will mail you, postpaid, a copy of our preliminary pamphlet, "A Step Nearer Perfection in the Making of Incubators," and will also list your name to receive a copy of our complete catalogue for 1906, "Poultry Raising Made Easy and Profitable," which will be ready for mailing in December. First come first served. This new catalogue is to consist of 228 pages, 8 by 11 inches, and will contain a large amount of valuable information, including a complete, illustrated description of our full line of manufactures, embracing the following popular Cyphers specialties,

Mealed Alfalfa,	Feed Cookers,	Cut Clovers,
Short-cut Alfalfa,	Lice Powder,	Shredded Clovers,
Shredded Alfalfa,	Egg Paint,	Mealed Clovers,
Chicken Coops,	Fumigating Candles,	Food Hoppers,
Portable Houses,	Egg Preservative,	Grit and Shell Boxes,
Shipping Coops,	Poultry Remedies,	Leg Bands,
Egg Carriers,	Chick Food,	Egg Testers,
Food & Water Vessels,	Laying Food,	Wire Fencing,
Bone Cutters,	Forcing Food,	Roofing,
Chicken Punches,	Scratching Food,	Sprayers.

WASHING WHITE FOWLS

By S. A. McWILLIAMS, M. D.

As our S. C. White Minorcas are raised on a city lot they become very dirty from the soot and greasy smoke that results from the burning of a low grade of soft coal in the buildings which surround them.

Such birds must be well washed before they are put in the show room.

To wash them well, requires forethought, time and patience.

Hot water in sufficient quantity, corresponding to the amount of filth and number of fowl intended to be washed, must be prepared and kept in readiness to refill the tubs. We usually have a couple of kettles of boiling water also ready in addition, if needed. A good fire and a warm room at about 90 degrees is another requisite. The fowl are usually washed 3 or 4 days before being sent to the show room. This gives time for the birds to dry, and for the owner to straighten their plumage, and clean the dirt from under the scales of their legs.

For this purpose we use 3 ordinary wash tubs or boilers set up level, on barrels or benches about 2½ feet high. This height is essential for one's comfort, if many fowl are to be washed. It takes two persons from 15 to 45 minutes or more to wash a very dirty fowl. Soft water is best for use, but if not attainable then we use 2 tablespoonfuls of ammonia water in each tub. For soap we use the best white soap obtainable, such as white castile or ivory.

Our house washtubs are about two feet wide and 10 inches deep and are nearly filled with water. The water

in the first one has a temperature of about 92 degrees, the second 80 and the third 70 degrees. In the third tub, or boiler of water we put a teaspoonful of liquid bluing, but not enough to color the birds blue. We keep the temperature of the room at about 90 degrees. The coops for the birds are well cleaned, dusted and bedded with dry saw dust, wheat or rye straw and cleaned daily. Wheat straw is said to stain the wet birds yellow. It takes 12 or more hours for the birds to dry. Separate coops are best, as it prevents the fowls' droppings from soiling each other's plumage. For roosters the coops should be high enough (32 inches) to prevent them striking their heads when crowing.

Those chickens to be washed are placed in coops by our side. Our sleeves are rolled up, and held there by strong rubber bands.

To prevent our being thoroughly soaked by the splashing of the chickens, we put on aprons extending from our neck to our feet and fastened around the waist.

When everything needed is in readiness our assistant catches a chicken by the roots of the wings and pushes it down under the water until it is thoroughly soaked, with only its head above the water. The oily nature of the feathers prevents their being easily wet.

The bird should be so held in the middle of the tub, as not to bruise its tail against the side of the tub, and its head kept far enough back so as not to see over its edge or it will try all the more to jump out, and when prevented, will act mulish, lean back and kick and splash the water all over.

When it does so, it must be squeezed

right down to the bottom of the tub and held there until it learns better. As soon as the assistant puts the bird in the water we begin to rub the bird all over with our cake of soap, then to wash the head and neck.

With the fowl facing us, we thoroughly soap our hands, then the head and neck of the bird. With one hand on each side of the bird's head we rub vigorously, backward and forward, until we get the dirt off.

With an old tooth brush and soap and water, we scrub around the wrinkles of the comb, head, nose and chin until they are clean. Then we scrub and wash the feathers of the neck until they are clean. In the meantime the assistant has been soaking and soaping and scrubbing the back and wings. The assistant and myself each take a wing, spread it out on our hand, rub on the soap and rub the feathers between our hands, as we draw our hands along the soapy feathers, in the direction of their growth, both above and below, until they are clean.

The tail feathers are cleaned in the same manner. The sickle feathers of the rooster receive our special attention. They are carefully soaped and rubbed between the palms of our hands and our soapy hands are frequently drawn along the whole length of the tail and sickle feathers.

Having cleaned the head, neck, hackle feathers, back, wings and tail feathers, we now lift the fowl out of the water and lay it on its side on a perforated board (over the tub), which has been prepared beforehand.

The board we use is 14 inches broad without cracks and 2 feet long. It is laid across the top of the level tub,

**"LET ME SUGGEST:
GET A CORNELL—IT'S
THE INCUBATOR OF
QUALITY."**

CORNELL Incubators and Peep o' Day Brooders

are absolutely dependable, no matter under what conditions you place them, climatic or otherwise.

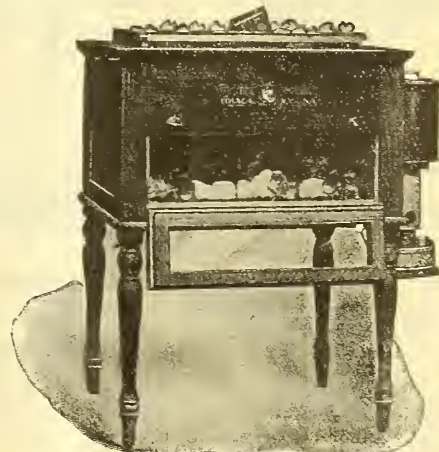

They will hatch for you a larger percentage of strong, vigorous chicks, which, when placed in our brooders, will mature with less loss, will grow more rapidly, and bring you more money, whether for market or the fancy. The success of last season's output is unparalleled in incubator history.

The sale of Cornell Chick Machinery for the coming season will be enormous; get your order to us early. If you are a novice, we will start you right, and if an experienced poultryman you will find in our chick machinery an innovation.

We have the EXPERIENCE, EQUIPMENT, AMBITION, DETERMINATION and CAPITAL to make our GOODS RIGHT. We WANT YOUR ORDER. We have CONFIDENCE in CORNELL INCUBATORS and BROODERS; you will have, when you use them.

If no dealer in your locality sells our goods, we send you direct from our factory, subject to approval and ninety days' test.

Send to-day for our complete catalogue, free for the asking.

BOX 121 HARTFORD, CONN. U.S.A. ESTABLISHED 1888

HOW TO BUILD AN INCUBATOR and BROODER

It's easy with our COMPLETE ILLUSTRATED PLANS. A ten-year-old boy can readily follow them with success. They show you every stage of construction, step by step, in nearly 100 half-toned illustrations. They contain complete specifications for building the famous PEERLESS INCUBATORS AND BROODERS. Every feature is clearly pictured and thoroughly explained, making it possible for ANYONE to build an incubator and brooder possessing exclusive features and advantages which are unequalled by any machine on the market. We supply ALL PARTS not possible for you to make, such as lamp, regulator, tank, heater, legs, door, etc., at a very small cost and furnish the

Plans and our new FREE Illustrated Catalog

which contains our full line of Improved Incubator and Brooder Fixtures and Supplies, including our New

Acme Automatic Lamp and Compound Regulator

with combined damper and flame regulator, which SAVES ONE-HALF THE OIL. No danger from fire; can't overheat; no trimming of wick; regulator controls both flame and damper. Can be attached to any make of incubator or brooder. If your machine is not working right our catalog will tell you how to remedy the trouble.

Salt Lake City, Utah, July 25, '05.

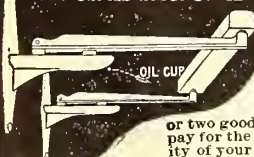

H. M. Sheer Co., Quincy, Ill.

I have built twelve 200-size Peerless incubators from your fixtures and plans. Six I sold to poultry raisers here, and six I run myself. These machines gave good results, never hatched below eighty per cent and as high as 92 per cent. I have up to date 2,150 Pekin ducks and 640 chickens. I don't think I lost over 5 per cent of ducks and chickens hatched. These incubators take very little care. The regulator, when once set, holds the 103 mark from beginning to end, and the lamp is a big oil and time saver. I have orders for

Respectfully yours, W. M. REDEKER.

4 Peerless incubators now and I want to build two or three more for myself. Plans and catalog are free. Address **H. M. SHEER CO., Dept. G, Quincy, Ill.**

No. 1-SINGLE ROOST STYLE

WHEN YOU BUILD

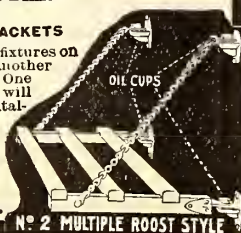

install **DAVIS** ANTI-LOUSE ROOST BRACKETS

The most practical and up-to-date poultry fixtures on the market. Don't let your old house go another season without them. It's false economy. One or two good birds saved from the ravages of the vermin will pay for the equipment of a house, while the increased vitality of your flock will return the cost many times over.

Prices: No. 1 style with screws, 75c per pair; 3 pair, \$2.00; 6 pair, \$3.50. No. 2 style complete with chains and screws, \$1.25 per set; 3 sets, \$3.25; 6 sets, \$6.00. F. O. B., Battle Creek, Mich. (Prices do not include roosts.)

Write for catalogue of up-to-date Poultry Specialties, or ask your dealer for our goods.

The KEYES-DAVIS CO., Ltd., Mfrs., Dept. B Battle Creek, Mich.

No. 2 MULTIPLE ROOST STYLE

and pulled out to one edge of the tub. Along this outer edge of the board, on its under side, a narrow strip is nailed or screwed to prevent the board from slipping across the tub.

While the fowl is being soaked, soaped and washed on this board the water will run over the edges onto the floor, if not prevented. To obviate this, we make a groove on the upper surface of the board, in horseshoe form, around the board, near its edges, so as to guide the surplus water into the tub. All over this board, within the groove, we bore $\frac{1}{4}$ inch holes, 2 inches apart, for the water to run through into the tub.

This manœuvre readily allows the remaining parts of the bird, including the legs, to be thoroughly washed and cleaned.

The fluffy feathers are taken between our hands, soaped and scrubbed until clean.

With one hand holding a leg, the hock or thigh feathers are also soaped and scrubbed until clean.

Every now and then a dipper of warm water from the second tub is poured over our work to see if the feathers are clean.

While washing the fowl, be careful not to rub the skin off the side or wing joint.

When finished the washboard is removed. The assistant holds the fowl over the center of the tub and water from the second tub (which is close by) is poured over the bird from a dipper or cup. The bird is again examined for dirty spots. If any appear they are cleaned. When the comb, head, neck, body, wings, tail, fluff, breast and legs are clean, the fowl is put into the second tub of water and the soap thoroughly washed out of the feathers.

Special pains are taken to spread out the wings and wash the soap thoroughly out of them. We spread them out and rinse them in the water and lift the fowl up and down in the water, and take lots of time to wash off the soap. We also wipe the feathers with the ordinary soft hand brush. It is next put into the bluing tub and thoroughly soaked and washed again. If the water is too blue the bird will be too blue and so will be the owner.

We next place the fowl in the sink or on the table and squeeze the water out of the feathers and fluff with our hands. A nice medium-sized soft sponge is next used to dry the body of the bird as much as possible. We now sit down upon a chair and take two rough Turkish bath towels, place one upon our knees and with the other one we thoroughly dry the bird.

We now hold the fowl firmly by the legs, and throw it up in the air a few times and as it comes down it flutters and expands its wings and feathers. If little wads of tissue paper are inserted among its feathers and under its wings the bird will dry more rapidly.

The two wet bath towels are hung up to dry on a pole or line, while two others are used for the next bird.

As soon as the first tub of water is dirty, we empty it out and fill it from the second tub and add enough boiling water from the kettle to heat it up to 92 degrees.

The second tub is also filled with fresh, hot, clean water.

A toothpick is a good thing to remove the dirt from the scales on the legs.

To clean the legs thoroughly we hang the bird up in a sack, through which we

cut holes for the bird's head and legs to protrude through and then with a toothpick we remove the black dirt from under the scales.

After the birds are partially dry it is well to put them in a cooler room (to prevent sweating and weakness) until they are perfectly dry, which is known by feeling under their wings. It would be well to rub the feathers along their web occasionally with a silk handkerchief or a chamois skin or dry flannel.

Always rub down the way the feathers grow, when drying the feathers.

While washing, after the feathers have been thoroughly soaked and softened, the fluff and other small feathers may be rubbed in any direction without harm.

Having washed and dried the fowl, before laying it away, comb the webs of the wings and tail with a dry hand brush or clean hair brush, so as to spread out the webs of the feathers.

In lifting the birds out of the coops, take hold of the wing bows and extend the fingers under the bird.

When washing birds we always wash one or more birds than we need of each class, so that we may take our choice at the last moment.

Male birds must be kept apart. Females also should be unless they have been accustomed to each other, and then only 4 or 5 should be kept together.

I have had females soiled with blood, and their combs bruised on their way to the show.

Women after washing their hair often use a fan or hot air register to dry it more quickly.

A hand fan or an electric fan is a good thing to separate and dry the feather webs.

By holding up the wings and fanning against the fluff the feathers dry rapidly.

Some persons recommend the use of peroxide of hydrogen to be sponged over the feathers to whiten them, and after that to rub over the feathers a little aqua ammonia.

If a fowl is to be dried before a stove one must be careful not to get the feathers too near or they will curl up and be spoiled.

With old birds great care should be

taken to remove old scale from the legs without injuring the new scales underneath. All dirt must be removed from beneath them.

Hot air is much warmer near the ceiling, hence the higher up the coops are placed, the sooner will the birds dry.

To make the comb, back, wattles, ear lobes and toes look nice, some people use camphorated oil with a few drops of vinegar, spirits, sweet oil and alcohol equal parts, glycerine or vaseline. These are well rubbed into the parts and the excess thoroughly cleaned off. Dust and dirt is more likely to adhere to such a surface. Others merely polish the legs with chamois skin.

Remember that it takes work to get the feathers wet and soapy, and takes twice as much time and patience to get the soap out of the feathers again.

Some fanciers dust their fowl with powdered starch just before sending them to the show.

Get sufficient corn starch to dust the chickens. Lay a piece of large, strong paper on a table, place the starch on the paper, then pulverize it very fine.

Put on your large long apron, place a fowl on your lap, work the starch in among the feathers with pepper box or powder blower. Holes can be made in the cover of a tin box which can be used for dusting.

WEST MICHIGAN POULTRY FARM.

This farm is located near Bangor, Mich., and consists of 80 acres and is beautifully situated on an inland lake and is devoted entirely to fruit and poultry culture, and under the guidance of Mr. Bigelow, the owner, is rapidly being transformed into one of the finest farms in the peach belt, and under the careful management of Mr. Ayers, the overseer, the poultry raised on this farm is making a reputation in the show room that Mr. Bigelow may well be proud of. About 2,000 birds were raised this year, consisting of White and Barred Rocks, White Wyandottes, Partridge Wyandottes and Rhode Island Reds, and at the time of our visit, the middle of Octo-

ber, they had culled down to about 700, which goes to show that they believe in keeping nothing but the best and marketing all that does not come up to standard requirements. We predict that birds from the West Michigan Poultry Farm will make their mark in the large shows this winter, and the older fanciers will have to hustle if they retain their laurels. They have the stuff that makes winners.

In September, at the Grand Rapids fair, they entered five White Wyandottes and took two firsts and two seconds and the same on White Plymouth Rocks, and this in one of the strongest classes ever seen in Michigan. Their Barred Plymouth Rocks are equally strong.

Readers of AMERICAN POULTRY JOURNAL who are desirous of securing good stock and fair treatment should correspond with the West Michigan Poultry Farm, Bloomingdale, Mich., and mention AMERICAN POULTRY JOURNAL.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: By your permission, I should like to report through your columns about my last spring pullets and learn if any of your readers can beat it. I had a few B. P. Rock and White P. Rock and two bantam pullets hatched the latter part of April that have been laying for one month and the 15th of September I shut up one of the bantam pullets to break her setting. My pullets that were hatched fore part of May are also laying.

During the hot weather I run my incubator contrary to all instructions I have seen. I gathered my eggs every evening and put them into the incubator, taking out young chicks every day, getting 90 percent of a hatch.

Receipt for crop bound chicks: Give them a small bit of common baking soda, nothing so good. I. W. RHODES.

C. E. Vass, of Washington, N. J., the Orpington breeder, has a change of address this month, and writes that he is prepared to furnish better and more stock at very reasonable prices. He also has the finest Orpingtons this season that he ever bred, and is sure to please any one who may favor him with an order.

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. **STOCK FOR SALE both OLD AND YOUNG. Illustrated circular free**

HARVEY SEED CO., 30 ELLICOTT STREET
BUFFALO, N. Y.

ILLINOIS STATE FAIR.

The poultry exhibit at the Illinois State Fair was a grand success—the first in history that there were no complaints. Mr. C. B. Blodgett, the able superintendent of Downer's Grove, was superintendent in charge of the poultry exhibit. He discharged his duties to the entire satisfaction of the exhibitors. Mr. Blodgett has been connected with the poultry department of the fair for the past twenty-seven years, and it is more to his hard work that the Illinois State Fair was the largest ever held in the United States.

The incubator manufacturers were well represented. Mr. M. A. Shoreen represented the Axford Incubator Company, of Chicago. He reports many sales; sold out his entire exhibit.

The Sure Hatch Incubator Company, of Indianapolis, Mr. Herman Seelig in charge, made as usual a creditable showing. Herman's pleasant countenance made many friends.

The Cyphers Incubator Company was represented by Mr. Charles E. Adair, the able incubator expert. He reports many large sales.

The Model incubator, manufactured by Charles A. Cyphers, was represented by the Chicago Poultry Supply House, Chicago, Ill., Fred Phillips in charge. He sold the entire exhibit; also twelve incubators to one man.

In the poultry department there were 2,876 entries, 500 more than the best previous year. In fact, they had to put some of them out in a tent. In quality they were good and all classes well represented. Judge D. T. Heimlich, Jacksonville, Ill., won in Barred Rocks 2d hen, 2d pen. U. R. Fishel, Hope, Ind., all prizes in White Rocks. Clement & Fike, all firsts, losing four out of possible fifteen in White Wyandottes. John A. Shaw, McKittrick, Mo., Silver Wyandottes, 2d cock, 3d hen, 1st, 2d, 3d cockerel, 2d pullet, 1st pen; also Buff Wyandottes, 2d hen, 3d cock; Buff Orpingtons, 1st hen, 2d cock, 3d pen. Rose Comb White Leghorns, J. A. Leland, Springfield, Ill., 3d pen, 1st and 3d cockerel, 3d pullet, 2d pen.

T. F. Potter, Downer's Grove, Ill., lectured to classes on his new discovery, How to select the laying hen from the non-laying hen. Such men as U. R. Fishel, Fred Schellabarger, D. T. Heimlich, W. C. Pierce, J. A. Bickerdike, J. A. Leland, A. G. Murray, president Illinois State Poultry Association; John Brinkama and others availed themselves of the opportunity to learn the "Potter System." The 200-egg hen is no longer a dream but a fact. Instead of sending the hen full of eggs to market you keep her, get the eggs out of her, and then it is plenty time to kill her. Mr. Potter is a member of the firm of T. F. Potter & Co., manufacturers of poultry house fixtures, and any one who has done business with him will testify to his honesty and integrity.

John A. Shaw, McKittrick, Mo., made some good winnings in Silver Wyandottes—2d cock, 3d hen, 1st, 2d, 3d cockerel, 2d pullet. These birds were the best in the show, but owing to the fact that they were too young and the older birds not quite through with their moulting they did not all get first money. His Buff Orpingtons are a grand lot of birds, winning 3d cock, 2d hen. In the Missouri State Show he won 1st, 2d hen, 1st pullet, 1st pen.

No Guessing

You know in advance what will come if the eggs are fertile when you use the self-regulating

Successful Incubators and Brooders

The machines for busy people and the inexperienced because they run themselves. That's the unqualified experience of thousands. The same under all conditions. 100 pens standard fowls. Incubator catalogue free. With poultry catalog 4 cents. Poultry paper one year 10 cents.

Des Moines Incubator Company,
Dept. 1,
Des Moines, Ia.

He also breeds White and Buff Wyandottes, Barred Rocks and Bronze turkeys.

John A. Dickerson, Rochester, Ill., had a large string of Barred Plymouth Rocks. He sold every one of them by Wednesday night. His birds are finely barred and good in shape. He has about 400 first-class birds for sale, for breeding or exhibition purposes. Write Mr. Dickerson for prices.

Glen Echo Poultry Farm Company, B. S. Hume, manager, French Village, Ill., made a fine showing. Their birds are all first class but were not quite through with their moult. The old-timers will hear from them during the winter shows. They report that they have a few exhibition and breeders for sale.

J. A. Bickerdike, "the trap-nest man," Millersville, Ill., captured the highest honors on trap-nests. His trap-nests are well constructed and work to perfection. They are also good for setting-hens. He made many sales during the past year, shipping them to nineteen different states. Ask him for free circular.

The Chicago Poultry Supply House made a very attractive display of Model incubators and brooders, manufactured by Charles A. Cyphers, and poultry supplies. The concession was in charge of F. J. Phillips, manager, and as usual it is useless for us to say he was hustling from early morning to late at night. He reports many large sales and a fine lookout for the coming season. The four blue ribbons which were offered for the best incubator, best brooder, best display and poultry supplies were won by the Chicago Poultry Supply House on Model incubator and brooder, manufactured by Charles A. Cyphers, of which they are western representative.

The White Wyandottes were well represented, 115 birds all told. The quality was better than ever. Clement & Fike, Libertyville, Ill., had twenty-three birds on exhibition. They won all the firsts, losing only four minor prizes out of a possible fifteen. Mr. Fike reports some large sales. He sold many birds at a good figure for the winter shows. He refused to trade one of his cock birds for a trotting horse.

Judge D. T. Heimlich, Jacksonville, Ill., made a creditable display in Barred and White Plymouth Rocks. Owing to the fact that the Judge had just returned from a three weeks' stay in Colorado, he could not prepare his birds as usual, yet he carried away some of the ribbons—2d hen and 2d pen—in the hottest competition ever known at any State fair. The four hens in pen were as near perfect in type, size and shape as can be found anywhere.

I. N. Barker & Son, Thorntown, Ind., breeders of Light Brahmas, made some great winnings this year at the Indiana and Illinois State Fairs. At Springfield they won 1st cock, seventeen birds in class; 1st and 2d hen, eighteen in class; 1st and 3d pullet, sixteen in class; 1st and 2d pen. Their birds are fine in hackle, back and tail, with nice black wings, which all breeders of Light Brahmas are looking for. Send for their free booklet, which is interesting and instructive, and if you buy stock and eggs from them you will be well treated.

J. BRINKAMA.

How Is Your Heart?

Is your pulse weak, too slow, too fast, or does it skip a beat?

Do you have shortness of breath, weak or hungry spells, fainting, smothering or choking spells, palpitation, fluttering, pains around the heart, in side and shoulder; or hurt when lying on left side?

If you have any of these symptoms your heart is weak or diseased, and cannot get better without assistance.

Dr. Miles' Heart Cure strengthens weak hearts, and rarely ever fails to cure heart disease. Try it, and see how quickly you will find relief.

"About January 1st, 1902, I took down with weakness and dropsy, and gradually grew worse. I was told by my family physician that my case was hopeless. My neighbors and family had given me up to die. My limbs and body were swollen to one-third larger than normal size, and water had collected around my heart. For at least three months I had to sit propped up in bed to keep from smothering. I sent for five bottles of Dr. Miles' Heart Cure, and by the time I had taken them all I was entirely cured. I feel better than I have for twenty years, and I am able to do any kind of work on my farm. My attending physician told me that if it hadn't been for Dr. Miles' Heart Cure I would now be in my grave."

L. T. CURD, Wilmore, Ky.

Dr. Miles' Heart Cure is sold by your druggist, who will guarantee that the first bottle will benefit. If it fails he will refund your money.

Keeps Poultry Healthy Prevents Disease

VIGER'S

Crushed Charcoal

Chemically pure, keeps poultry strong, healthy and in good laying condition. Corrects wrong feeding. Not a drug, but Nature's own purifier. Coarse or fine granulated, also pulverized for soft feed. 50-lb. trial bag \$1.00; special price for quantities. Samples free. Viger's Coal & Wood Co., 434 20th St., Detroit, Mich.

ARE YOUR HENS LAZY?

Some of your "biddies" which strut about your poultry yard and which are not even paying their board, it would be a good plan to "axe," or make them quit their loafing. **Tonic Poultry Food** will make them get to work in double-quick time. They like it.

For fifteen to twenty fowls mix two tablespoonfuls with their feed every day—then watch their laying nests. They will lay regularly, rapidly and nearly double the output of eggs.

Tonic Poultry Food

practically costs you nothing. One extra egg a day will more than pay for a 25-cent package. It is vegetable and bone—is harmless. It contains blood-making, flesh-forming, bone-constructing and egg-building materials—it assists the hen's digestion. Makes her happier, more contented, and develops sweeter flesh; gets her ready for market quicker. Makes brighter combs and in every way improves the appearance and carriage of your fowls. Let us help you. Write us a letter, tell us your troubles. We have a 48-page booklet which is waiting for you. We send it free. Ask your dealer for **Tonic Stock Food**. If he hasn't it, send to us. Write us today addressing Dept. W, and get our beautiful souvenir calendar free. Agents wanted.

Shows, Associations and Clubs

Secretaries are requested to send us the latest news and announcements for this department.

WISCONSIN STATE POULTRY SHOW.

Arrangements have just been completed for the ninth annual exhibition of the Wisconsin State Poultry Association, to be held in Oshkosh from January 15 to 20, 1906. This will without doubt be Wisconsin's leading show, backed as it is by a generous State appropriation. In fact, it bids fair to be one of the leaders of the northwest.

Both of the judges selected have national reputations. Judge D. J. Lambert, of Apponaug, R. I., will handle the American classes as well as a few minor breeds. Judge Charles McClave, of New London, Ohio, will pass upon the Asiatics, Mediterraneans, bantams and waterfowl, besides some of the other varieties. With such men to score the birds there is every reason to believe that this will be the gathering place of hundreds of fanciers.

The prize list has been entirely revised, and it is now possible to win a \$5 first prize with a 35-cent entry fee. Fifteen silver cups will be offered for competition, besides numerous cash special prizes and a large number of specials donated by breeders, poultry supply houses and specialty clubs.

The large Company B Armory building has again been secured at great expense. Uniform coops will be furnished free by the association. We are prepared to care for 1,500 birds comfortably this season and every indication points to that number of entries.

Premium lists will be ready for mailing December 1. The secretary will be glad to send you one.

FRANK W. RADFORD, Secretary,
Oshkosh, Wis.

SHEBOYGAN, WIS.

The West Shore Fanciers' Association will hold its third annual show at Sheboygan, Wisconsin, Thanksgiving week. The preceding exhibitions have been more successful than its most enthusiastic members dreamed of: first year over 500 entries, second year nearly 700. The show this year will rank among the leaders in the northwest.

The show will be conducted in a business-like manner. Every exhibitor will be accorded every opportunity to show his birds to the best advantage. The Association counts itself fortunate in having secured Mr. James A. Tucker, of Concord, Mich., to judge the show. His well known ability and impartial fairness place him at the head of the list. Mr. Tucker was selected from over two hundred applicants as one of the twenty jurors at the World's Fair Poultry Show, an honor that attests his marked ability.

The Association has closed a contract for Concordia Hall. The hall is the most centrally located in the city, half a block from electric car line. Electricity and steam are used in lighting and

heating. Rooms for exhibitors are provided separate from secretary's office. The Association owns its own coops, which are free to exhibitors.

We feel that our inducements in the form of cash prizes, eight silver cups, and specials, are sufficient to warrant any one in making an exhibit with us (our entry fee is the low price of 25c for each bird), but more important than any of these are the added interest in you and the added business in your birds, which are sure to follow.

Judging will be done Monday and Tuesday; Wednesday, prizes awarded.

Show open to the public Wednesday, at 7 p. m. Cards will be in place, so that visitors can see the winners.

INDIANAPOLIS SHOW.

The first week in February will see in Tomlinson Hall one of the largest and finest displays of poultry held in America the coming show season. The cash prizes will be equal to any offered and every effort will be made to make this the greatest show Indianapolis ever presented for lovers of poultry. Theo. Hewes is the president of the Fanciers' Association of Indiana and E. A. Pierce is the secretary, to whom all communications for particulars may be addressed. The judges are selected with a view of pleasing the exhibitions of the different varieties. Don't fail to prepare for this show and for the sale of stock and eggs. No better opportunity is offered the breeders. The officers will in every way direct their best efforts to make it pleasant and remunerative for all exhibitors. Send your name to the secretary for a list to be sent as soon as issued.

E. A. PIERCE, Secretary.

"THE GREAT DETROIT SHOW."

The Michigan State Poultry & Pet Stock Association is now ready to announce their show dates as follows: January 27 to February 1, 1906. This association is one of the strongest of its kind ever organized in this city, having over 200 enthusiastic members, including the largest breeders in the State, and it is the earnest request of every member to make the coming show one of the largest and best shows ever held in Detroit, and on a par with such shows as New York and Chicago. We have secured the "Light Guard Armory," one of the largest and best equipped halls in the city, and all arrangements for uniform cooping have been let; the Association also has a reserve fund already in the hands of the treasurer and all exhibitors will be paid before the closing of the Show.

We also have secured the services of three most competent judges—Butterfield, Tucker and Bloss—which will assure all exhibitors a good score card.

This show will undoubtedly be the best event in the State and all breeders should make an effort to send a

large exhibit. Our list of specials, including many silver cups, will exceed all previous shows held in Detroit.

Write our secretary for premium list and particulars; all correspondence promptly answered.

The association is officered as follows:

Jacob Baumann, President; Geo. Renton, Secretary; S. D. Lapham, Treasurer.

MINNEAPOLIS, MINN.

The Minnesota State Poultry Association will hold their annual show January 23 to 30, 1906. The fancier and breeder that really wants to exhibit where show room attractions, commodious quarters and the best single cooping system is provided in American wants to begin to prepare to be with us on these dates. These things we can guarantee, beside the best judges procurable, and very liberal cash and special premiums, for which arrangements are completing whereby every obligation will be met in full before the close of the show. There are also twenty silver cups.

The poultry, pigeon, cat and lap-dog, as well as the great show of oriental and sportsman's varieties of game birds, will all be cooped under the superintendency of "genial" Ralph Whitney, whose experience assures the best of care with our perfect cooping system to every specimen entered.

The premium list will be ready for mailing by December 1 and full details will be furnished by the papers as completed, as every effort will be put forth to make this the leading poultry and pet stock show of America for 1906. Entries close January 15, 1906.

GEORGE A. LOTH, Secretary,
Minneapolis, Minn.

FORT WAYNE, IND.

The People's Poultry and Pet Stock Association of Allen County, incorporated last March, has now forty-five members, all breeders of fancy poultry, who are working hand in hand for the largest and best show ever held in Fort Wayne.

The judges, Orr, Ellison, Ewald and Mackie, are styled the "Big Four," and fanciers throughout this section are taking a greater interest on account of their connection with this show, which will be held December 11 to 16.

The dog department will be controlled by the rules of the American Kennel Club and promises to be a big feature.

Large regular cash prizes will be paid in addition to \$110 in gold as special prizes. Three silver cups, each valued at \$10, will be presented to the highest scoring fowl, pen and best display of pigeons. Several hundred dollars' worth of merchandise, offered by our friends and the business public, ranging in price from 50c to \$15, will be given as special prizes. The association guarantees the payment of all prizes.

There has never before been so much interest displayed in this locality. With its 100,000 people, Fort Wayne and Allen County, so admirably located, and its numerous railroads and interurban lines, assures a good attendance. One thousand admission tickets have been distributed among the members, who are using all their efforts to dispose of

them to their friends. An eighty-page premium list, with entry blanks, will be mailed to those who desire them; also any information regarding the show will be cheerfully answered by the secretary, Phil. A. Heller, Fort Wayne, Ind.

BUFF ORPINGTON CLUB.

The National Single Comb Orpington Club are now working on their first annual catalogue and expect to get out something in this line that for beauty and value have never been surpassed by any specialty club. They will publish the names and addresses of every member free of charge. If you are not already a member you had better join at once, as we expect to get the material for this book in the printer's hands early in December.

Club members only will be allowed to advertise in this book and we will publish free of charge any suitable half-tones of birds, buildings, etc; also articles pertaining to the Buffs or the management of fowls in general for club members only.

About twenty handsome silver cups will be offered at various poultry shows throughout the United States, the places and on what they will be offered will be announced in the December poultry journals.

The club has also decided to again offer their elegant silk trophies at every poultry show in America. All specials

offered by the club will be competed for by members only.

The club has nearly doubled their membership during the past month by offering a cut rate to all who join now and will continue this policy for a very short time. All interested parties should send for the club's latest literature, which will be sent by addressing the secretary, Will H. Schadt, Goshen, Ind.

WON MOST PRIZES OF THE SEASON.

F. W. Niesman & Co., of Freeport, Ill., have made the most winnings of the season. In the past eighteen months they have taken 3,785 prizes in their different varieties of land and water fowl at the different State and county fairs. In Springfield, Ill., they captured more prizes than any other breeder, having 235 birds on exhibition. They sell their stock reasonable. Do not forget to send for their large poultry book, which is 10 cents, to cover postage.

"Nothing but the 'Mandy' Lee for me in the future," says W. A. Larkins, of Larkins, Fla. Best for him—best for you. Catalog free. George H. Lee Co., Omaha, Nebr.

Don't overlook our offer of fifty dollars in cash prizes for articles in this issue.

"MONEY in POULTRY."

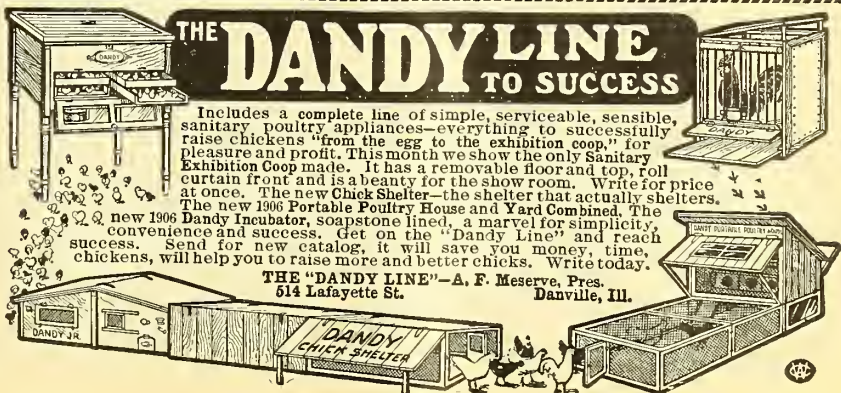

Our new 84-page book for 1905 tells how to make it; also how to breed, feed, grow and market your poultry for best results. This book probably gives more reliable information about the poultry business, obtained from actual experience on the largest farm in America devoted exclusively to the rearing of pure-bred poultry, than any other book published. Describes and illustrates 25 varieties of our pure-bred fowls. Quotes extremely low prices on stock, eggs, incubators and brooders. Mailed for 4c in stamps.

FRANK FOY, Box B, DES MOINES, IOWA.

THE DANDY LINE TO SUCCESS

Includes a complete line of simple, serviceable, sensible, sanitary poultry appliances—everything to successfully raise chickens "from the egg to the exhibition coop," for pleasure and profit. This month we show the only Sanitary Exhibition Coop made. It has a removable floor and top, roll curtain front and is a beauty for the show room. Write for price at once. The new Chick Shelter—the shelter that actually shelters. The new 1906 Portable Poultry House and Yard Combined. The Dandy Incubator, soapstone lined, a marvel for simplicity, convenience and success. Get on the "Dandy Line" and reach success. Send for new catalog, it will save you money, time, chickens, will help you to raise more and better chicks. Write today.

Write Us About Fence

We manufacture 26 styles of fence, for poultry, farm, park and other purposes. We sell direct to farmers **30 Days' Free Trial** giving. It will pay you to write for prices and our **FREE FENCE BOOK**. Tells why Advance Fence is strong, durable and up-to-date. You save the dealers' profit in dealing with us. Just remember that when you need fence.
ADVANCE FENCE CO., 1851 Old St., Peoria, Ill.

WHITE LANGSHAN CLUB.

Watch for our date of meeting. Join our club and help us place the White Langshans where they belong. We want the assistance of every White Langshan breeder. You will be well repaid for your efforts when you see the popularity we can give the breed, but we need your aid. Write for information. A. H. ASCHE, Secretary.

Princeton, Ill.

WHITE WYANDOTTE CLUB CATALOGUE.

The annual catalogue of the National White Wyandotte Club for 1906 is now ready for mailing and a copy should be in the hands of every person interested in White Wyandottes or who is about to start with poultry. The catalogue contains much valuable information about the breed and a copy may be secured free by writing the secretary, Ross C. H. Hallock, St. Louis, Mo.

MINORCA CLUB MEETING AT MADISON SQUARE GARDEN.

In a vote for judge of Black Minorcas at Madison Square Garden, taken by the American Black Minorca Club, Geo. H. Northup is elected by a majority of fifteen over the combined number of votes for the four other candidates.

The indications are that the next annual meeting, which is to be held at Madison Square Garden, New York, show, will be one of the best since the club was organized. We expect a large exhibit and a liberal donation of specials from our members, to be competed for at New York.

H. C. WHEELER, Secretary.

BLUE ANDALUSIAN CLUB.

In our list of specialty clubs, published in the September issue, through an oversight the Blue Andalusian Club of America was left out. Mr. E. L. C. Morse, 9009 Escanaba avenue, Chicago, Ill., is secretary of this club and will be pleased to give any information desired.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: The display of poultry at the Ringgold County Fair during the first week in September, which I was called to judge, was a very creditable showing of birds, the Barred Plymouth Rock and White Plymouth Rock leading in both numbers and quality. I have judged the poultry at this fair for five or six years in succession, and I think this year the numbers were greater than ever before and the quality much better. Many excellent birds were on exhibition. A number of the specimens were as good as were shown at our Iowa State Fair. The breeders of fine poultry and the farmers, especially the farmers' wives, are taking more interest in poultry than ever before. The old hen is ahead of the cow and the sow when it comes down to dollars and cents. If you do not believe it, invest \$35 in a cow and \$35 in good, young hens; take good care of both and see if I am not correct.

T. A. STEVENSON.

Shannon City, Iowa.

The Jackson (Mich.) Poultry and Pet Stock Association is enthusiastic over the prospects of a good show to be held December 5, 6 and 7, 1905.

This being the first exhibition of the season in Michigan, poultry fanciers all over Michigan and some from Ohio and Indiana have promised to enter birds to compete for the various ribbons. Frank W. Travis will judge the show.

Among the exhibitors at Portland from a distance was Henry Steinmesch, St. Louis, Mo., the well known breeder of Silver Laced Wyandottes. In addition to the Silver Laced Wyandottes, Mr. Steinmesch showed some Goldens, Silver Penciled and Columbians, winning 14 prizes out of a possible 17. This after the birds traveled nearly 2,500 miles. Mr. Steinmesch is a fancier who year in and year out maintains the position as one of the foremost fanciers in the country.

U. R. Fishel, Hope, Ind., the famous White Plymouth Rock breeder, exhibited a fine string of birds at the Illinois State Fair. In his flock he showed the cock who captured the blue ribbon at the World's Fair, St. Louis, last year. He won all prizes, including the sweepstake for best American, which is the most coveted prize. To the person who is a true fancier these White Plymouth Rocks must appeal. His birds are the pure white kind, which all breeders are looking for.

A NEW POULTRY BOOK.

Especially Written and Designed for the Beginners—Sent on Approval.

The book treats at length on the great profits in poultry culture, citing many cases where splendid incomes have been made from this fascinating business. It is a well established fact that there is big money in poultry culture. There are thousands of men and women who are earning princely incomes from it, while there are many more thousands who are making a snug little income every year conducting it as a side issue. To make from \$100 to \$1,000 clear profit every year, just in the spare moments, is no small matter with most people. And yet there are thousands who are doing this very thing raising poultry, and this same thing can easily be accomplished by anybody who will conduct it in an intelligent manner. It is just for this latter class that this book has been designed and by following its simple instructions success will be sure and the profits large.

SENT ON APPROVAL.

We want every beginner to read his book and we are willing to send it free on ten days' approval to every man, woman or boy interested who will take the trouble to write to us for it. In order to assist our readers to get this book on approval we print the following coupon, and advise our novice friends to fill it out, cut off, and send it today: Congress Park Poultry Yards, Congress Park, Ill.

Enclosed find 4c in stamps for which please send me on approval, your new book, "Successful Poultry Culture for Pleasure and Profit." If I want the book I agree to send you 50c for it. If I don't want it, I agree to return it to you within 10 days.

BEFORE THEY BEGIN TO KNOCK THE STANDARD.

In all probability before long the readers of poultry papers will be regaled with the various defects of the new Standard, but before the knockers get in their work I desire to say a good word for that entertaining book.

What pleases me most in the new Standard is the emphasis it lays on weight and shape, and the good sense it shows in urging fanciers not to breed for color alone.

Let us consider what it says regarding weight. It says, like the old Standard: Deduct two points per pound for underweight; but it also says, which the old Standard never did, when specimens are equal in score, the prize shall be awarded to the specimen approaching nearest to Standard weight. It also says regarding American classes, that excess of weight over Standard weights shall be punished for over-weight of more than one pound.

In my opinion this change is the most important move made in poultrydom for many years. The old Standard practically encouraged breeding for over-weight. Indeed I remember seeing not long ago an advertisement in a poultry paper in which the breeder boasted that all his birds were several pounds over weight! He considered that fact a great

that it shall gradually soak into his mind.

The young breeder and the old breeder ought to think this over, ponder on it and weigh it in his mind.

It means a complete change in ideals of chicken breeding. In the old times the two things to be striven for were color and big weight and size. The bigger the bird the better the bird. If you had the right color never mind the shape. The result has been that in Mediterranean breeds (with which I am most familiar) you would see big, awkward, lumbering brutes in feathers presented to the public at shows as typical specimens. This was distinctly a harm to the poultry interests.

With the new Standard we shall have due and proper regard paid to shape and size. There is no longer any inducement to breed birds above Standard weights—in fact such over-weight is a distinct defect. More attention will be paid to shape and symmetry. Color, as always, will be important, but not the pre-eminent thing it always has been.

All these changes will take time to effect; old-fashioned judges will go on as usual, and there will have to be some quarrels before they accustom themselves to the new order of things, but it will come in time.

Let us give the new Standard credit for this long-needed reversal of old ideals.

E. L. C. MORSE.

TWENTY YEARS.

Twenty years is but a very short time in the world's time, yet to a person it seems long, especially if he is in jail or has the toothache.

As I look back and consider what has been accomplished in the twenty years since I have taken an interest in poultry it seems truly, by what has been done, a long time.

I was just about able to vote when I contracted with my father to take charge of the poultry and raise some broilers and eggs in the winter. We had a minister friend who was doing well on a small scale with an incubator and brooders. His was a 720-egg machine. The eggs were put up against a rubber cloth; a stove was used to heat the water. They did not become popular for some reason. I suppose the rubber would leak too easily for one thing and they cost too much money for large sales.

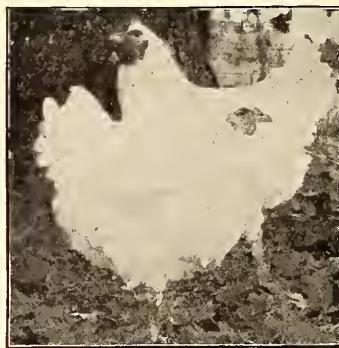

A machine that had quite a run at that time was the Eureka, invented by Mr. Campbell. It was a double-decker and although you seldom did well with both trays, taking the hatches as a whole they did well.

It had a clock on to turn the eggs every six hours, although you could buy a machine without one. Price with clock \$75.

About 1885 a man in West Chester bought one, but could do nothing with it. A friend of mine bought it and the first trial had about 150 chicks.

He was an expert with a machine, but would fail when he tried to raise them with brooders. His fault was in feeding. He at one time with a later machine hatched 101 chicks out of 100 fertile eggs. He had a double egg and by watching and helping at the right time he got the two out and they were alive and separate.

In 1884 there was a machine called the Keystone given first prize at the Philadelphia State Fair. It was three trays

PAIR WHITE WYANDOTTES.

Hatched March 17; photographed August 26; Combined Weight, 10 Pounds. Bred by J. B. Bennett, Ringwood, Ill.

point in their favor. In discussing chickens with intelligent breeders in the past I have often noticed the same idea, that over-weight was a great desideratum. All this has been changed now. Any man that breeds now for size merely will find his birds outclassed henceforth. The aim of breeding now is to come as close to Standard weights as possible. In other words, when the Standard says 10 pounds it means 10 pounds and not 12 or 15 pounds. Not many years ago at Chicago a breeder exhibited a monstrous bird, away over Standard weights, and was proud of that fact. A good many breeders seemed to think such breeding was to be encouraged. Such a bird now would probably be regarded merely as a freak, to be classed with a bird without toes or without tail or wattles—a curiosity for the idle and ignorant.

In speaking of shape the new Standard says: Judges must compare each and every section of the specimen and not allow color alone to influence their decision, the vital importance of typical shape to be borne constantly in mind. Every judge in every show for years to come ought to paste this in his hat and hang it over his bed at night, so

high and had four copper tanks, six inches apart. The lower one had a tight door and was closed all around, while the others were open and a case over all. I bought one and although I hatched hundreds in it, it was a failure as planned. It would hold the heat well by the use of mercury and ether, but the tubes were so small the circulation would change and then it would change the temperature. I paid \$58 for it.

The Monarch was made at this time, too, and was regulated by the expansion of the water and was a very good machine for the time, but none compares with our present machines in regulation or ventilation. Regulation I place as the most important of the whole machine, with ventilation next.

What a change and growth in the poultry papers! The invention of photographic engraving has added to our enjoyment and to the looks of the papers more than anything else, and the great interest has added many subscribers, which gives a paper more money to put out a good one.

The *Bulletin*, *Monthly*, *American Poultry Journal* and the *Poultry-Keeper* were the main papers. The *Poultry World* was one of the first lights then and how we did read it. As it came my way first it has always seemed like a first love.

The price of all those papers was \$1 per year. As you may guess, the combined circulation would not make much more than a good big circulation now. Cutting the price to fifty cents was a great thing for the subscription list, for it is easier to get four subs at fifty cents than two at one dollar.

Twenty years ago the Barred Rocks had been boomed and the Silver Wyandottes were just having their boom. We would almost wonder what a show was composed of in the way of breeds.

My father had gotten some pure Barred Rock eggs and raised a small flock. He let a local fancier have them all at one dollar each. I thought that was twice the profit had they been marketed, and when I took up the matter I determined to raise the pure breeds, as I saw at once more could be made from the same labor.

Another thing I like about the pure bred business is the social part. Poultrymen are a social lot, and many of them are of the salt of the earth, with some spoiled salt thrown in. The gathering in the show room is looked forward to with pleasure, unless you let your best nature all go to making dollars out of prizes.

At that time there were but two breeders near me, where now they are by the dozen. I had no help to start by example, as nearly all have now. A poultry man will help a new one to start, even if he will be a rival. At one time a rival bought three rose comb cockerels to beat me at Reading and asked me to look them over and tell him the poor points. I did, and did it honestly, but I had the first four winners in the class without buying.

One of the two neighbors was an old breeder, who bred Rocks, Cochins, Silver Wyandottes and Langshans. He spent the amazing sum of two dollars a year advertising one year and sold sixty dollars from it, yet he could not make it pay. I saw the possibilities of the business and stuck to it until I knew it and was known in the fancy, but I went slowly and made my living from the market end as I went along.

I have found the demand increasing each year. When I made known my plans to breed thoroughbred poultry as a business my father and the old fancier told me the demand would not continue, as it would not be long until all had them and there would be none to buy. I often think of it when I get good big orders. The old man is dead now for some years, but before he died I was doing a good business and would show him the mail. He would say: "How do you get them?" One thing he could do, that was grow the birds to perfection in size and condition. He would excel us all in the attention to every little detail in attending to the stock and their quarters. The business part was lacking, which is very essential in the selling of the product.

Poultry shows had been held for a number of years, but there is now as many held in one year as there was in many years then. There was none near me and the first show I saw was at Philadelphia in 1892, although one was held the year before, but I did not get down. From 1891 there has been shows in all the towns around us.

THE FUTURE.

I fully believe in the future, and if the world stands I am sure the demand will increase. There are two sources that bring customers. One is from the ranks of people who have been keeping mixed stock and from those who start homes. This class is no small per cent.

If we who sell are honest and help others it will greatly help the business, for it is one that depends wholly on faith in mankind. If a beginner is deceived it will often put him out of the business, and to be honest and helpful is the only way to do business for the good of the seller, too. W. W. KULP.

Pottstown, Pa.

ACKLEY & PAGE WILL NOT EXHIBIT THIS SEASON.

Ackley & Page, Woodstock, Ill., the Buff Wyandotte breeders, will not exhibit this season, but will give their time to preparing their stock for sale and fitting birds for the show room. They will condition a large number of show birds, in order to supply specimens to purchasers fit to win anywhere. They enthusiastically report that this season their stock is simply "out of sight," and they have a lot of it.

The buildings of the White Leghorn Poultry Yards Company, Waterville, N. Y., have just received two coats of paint and the painting of a plant of such size takes considerable time, ten men having been employed for three weeks. If any of our readers happen to be in the neighborhood of Waterville they will be well repaid for a visit to this plant, which is the most up to date in the country.

Dr. William Y. Fox, of Taunton, Mass., the Black, White and Buff Cochins Bantam breeder, writes that he will be unable to exhibit this winter and is, therefore, offering some very choice show birds for sale.

I. N. Barker & Son, Thorntown, Ind., have reason to be proud of their record on Light Brahmas this year. At the Ohio State Fair they only exhibited six birds, two hens, two cockerels and two pullets, and won 1st hen, 1st and 2nd cockerel, 2nd pullet and 1st pen. At the Indiana State Fair they won 1st cock, 1st and 3rd hen, 1st cockerel and 1st and 3rd pen; and at the Illinois State Fair they made a clean sweep of every first prize, besides 1st, 2nd and 3rd hens in a class of thirty-five. At four winter shows in January and February, 1905, they won fifty-eight prizes. This included the Ohio and Indiana state shows. At ten shows and fairs of 1905 they have won 1st breeding pen every time.

INTEREST--WONDER--ENTHUSIASM

When *Farm-Poultry*, the great National poultry publication, began its systematic course of "FIRST LESSONS IN POULTRY KEEPING," poultrymen were interested. Immediately they wondered why the plan had not been put into operation long before, and now every one is enthusiastically singing the praises of this innovation, which, for a very small sum, gives better value than can be secured from a high-priced correspondence course. And so it was when we began to publish show winnings in full, entirely disregarding whether a prize-winner was our advertiser or not, because we felt that readers were entitled to all the news—not only a portion of it. For sixteen years *Farm-Poultry* has been giving its readers the best writings obtainable, intensely interesting—timely,—practical—profitable information on incubating, housing, feeding, raising, breeding, marketing and exhibiting poultry. *Farm-Poultry* is issued twice a month—1st and 15th—and costs 50 cents a year, but for a limited period we are making a

SPECIAL OFFER

of *Farm-Poultry*, *American Poultry Journal* and *Reliable Poultry Journal*, all three papers one full year for only one dollar.

These Eastern and Western giants of poultrydom will keep you in touch with conditions and happenings in their respective territories as no other combination could possibly do. Sample copy free. Send all orders and remittances to

M. BURG & SONS, PROP'S.
1202 RAYMOND AVE., ST. PAUL, MINN.

WINTER EGGS

Immature stock can't lay. If your pullets are stunted—if not gaining in weight—if they show no indication of getting full-feathered—don't expect eggs from them this winter, unless you help them regain health and vigor.

Neglect this, and your flock will fall victims to colds, roup, diphtheria, etc. If you provided proper food and shelter through the summer, their troubles are due to lice. THEIR WEAKENED CONDITION PROVES THIS.

Dust baths are now cold. Pullets avoid them. Body lice multiply most rapidly in cool weather. If you dislike sitting up nights dusting your flock singly by hand, and if you want a POSITIVE METHOD OF REMOVING ALL LICE which hide under feathers of the head, hackle, vent and wing butts, get Schild's Lice Killing Machine. It thoroughly cleans a dozen, while you try to clean one by hand. Does not injure plumage nor impair sight or breathing. Helps moulting, reduces feed bills, and is guaranteed to pay for itself. Our catalogue tells how to increase the yield of winter eggs. Sent free. Write for it today.

The Chas. Schild Co.

2 Frankfort St.,
Cleveland, O.

NOTICE TO POULTRY ASSOCIATIONS.

We have made arrangements with the Caxton Engraving Co., Chicago, Ill., to furnish us with a limited number of three-colored posters, designed especially for poultry shows, and will be able to furnish them at a very reasonable price. This poster is without doubt the handsomest ever gotten up for this purpose and will prove one of the best advertisements that an association could possibly put out. Every up-to-date association should secure some of these posters to announce their coming show. These posters will not cost any more than an ordinary type poster, but are much more attractive and will give tone to any exhibition of poultry. Send for sample and prices to AMERICAN POULTRY JOURNAL, 325 Dearborn street, Chicago, Ill.

Elsewhere in this issue will be found the advertisement of the Caxton Engraving & Printing Co. This firm is one of the old established engraving houses of Chicago and has a reputation for doing high-grade work in both engraving and printing. The care displayed in the execution of its productions, be it only a small illustration or cut or a voluminous catalogue, carries with it that piquant individuality that has gained for these people their place in the front rank of printers and engravers. If any of our readers pride themselves on a finely bred hen and wish to spread her fame by picture or write-up they should read the ad of this firm and write them for prices.

The Pinkerton Mfg. Co., Box 20, Lincoln, Neb., commence the advertising of their Queen incubators in this issue, and everybody interested in poultry raising should correspond with them at once.

BRANDING STEERS.

Did you ever brand a steer? Did the steer look happy and satisfied with life? Perhaps you feel about the same way when you shave. If so, stop using common soaps for shaving and try the only real shaving soap made especially for shaving by the J. B. Williams Co., of Glastonbury, Conn. If you once try it, you will never be satisfied with any other kind. That is why they are willing to send you a free trial sample as per their offer in another column. "Try it for your face's sake."

"Between the magazines that are using the lever of their circulation to pry up the world, and those which have nothing of current interest later than 1812, there lies a fine pathway for some magazine, for people who are now on earth who are not excited about the proximity of the demerit bow-vows to the orbit of this sad old earth, and in that path *Scribner's Magazine* seems to be walking in solitary state. Its fiction is particularly sane and wholesome. It lacks the Miss Nancy pucker of the fiction of the magazines of prunes and prisms, and holds the vigor of the fiction of the more strenuous magazines without the slightest rawness. *Scribner's* is a great and good magazine, and should be in every American home."

The De Graff Poultry Yards, of Amsterdam, N. Y., won at the recent New York State Fair as follows: On White Leghorns and Single Comb Rhode Island Reds, making a complete entry of two single specimens in each class and six breeding pens; on S. C. Rhode Island Reds in a class of 150; 1st and 2nd pens of old birds; 1st and 2nd pens of young birds; 2nd cock; (moulting) 1st, 2nd hens; 1st, 2nd cockerels; 1st and 3rd pullets; Rose Comb Reds, 2nd pen; White Leghorns in a strong class; 1st pen young fowls, and a good showing in all the classes.

SUPERIOR TRAP NESTS

to all parts of the United States. Calls received from Atlantic to Pacific, and from Canada to the Gulf. Won highest award at Illinois State Fair. Write for special introductory prices.

J. A. BICKERDIKE Millersville, Ill.
The Trap Nest Man,

OAKWOOD JOTTINGS.

We have just been pulling and piling our mangelwurzel. These beets, some of which, grown on only moderately rich soil, weigh from nine to ten pounds, are very easy to pull, or rather upset, as they stand three-fourths out of the ground. Split lengthwise and hung here and there within the poultry houses on nails, they furnish a much needed succulent food in winter. Hung a little out of easy reach, they stimulate the fowls to health-giving exercise. They, and cut clover serve to correct the too concentrated grain ration of winter.

Not only what is commonly called green food, such as turnips, mangels, rape, kale, growing rye, etc., are essential to profits in winter, but meat food as well. In the warmer months a flock of hens, if not too large, will find plenty of insects and worms, which are both meat and drink to them; but to a larger flock, in summer, and to any flock, large or small, in winter, cut meat and bone from the nearby butcher, or some by-product of the great city slaughter houses, should be fed.

Nothing on a farm is, as a rule, more profitable than the hens. In this part

of Illinois the thrifty housewife often pays the entire grocery bill with the income from these busy cacklers; and then often has a neat little sum left for some other purpose. What recommends hens, if not too numerous, is that they are continually helping along the credit side of the book, and comparatively little can be justly charged up against them.

We sold, last year, about the first of June, Leghorn eggs to a nearby neighbor. He had never made a study of wide, narrow and balanced rations and he fed to the chicks, when young, what came handy, and when they were older, let them find the greater part of their living in their own way. This they did to perfection, scouring the fields and roadside for seeds, insects and tender blades of grass. We saw them almost daily and we never saw chicks do better.

It is the spirit of false calculations that often ruins the poultry business. These calculations run about this way: If the income from one hundred hens is so much, then the profit from two hundred is twice so much, and from three hundred three times so much, and from a thousand so very much. The items of food, housing and attention required

are apt to be left out of the calculation and so it is vitiated. Often more eggs are sold from a flock of one hundred hens than from a flock of two hundred. Especially is this true if the two hundred are expected to pick up the greater part of their living, where the one hundred had picked up theirs.

Of course a large number of fowls can be profitably kept on a farm if proper care is taken of them. They will not take care of themselves to so great an extent as a small flock will. There are now emphatically two sides of the book. We are now on a debit and credit basis. We are now in business. Our brains for the many are to largely take the place of the instinct of the fowls in the smaller flock. Study of foods and their prices and values, of housing, of breeds and their adaptability to different uses, of a thousand details not to be learned in a day, now becomes deeply interesting. This is an age of large undertakings and there is money in the poultry business for the man who is level-headed and who will give proper attention to details.

ALVAN SMITH.

Marshall, Ill.

Take your lice powder off that shelf and dust your setters once each week. This makes the chicks grow faster. See?

A SCIENTIFIC DISCOVERY!

Don't Kill The Laying Hen!

Learn the Secret of Knowing
How to Select the Laying Hen
From the Non-Laying Hen.

This Information Will Enable You:

- 1st. To avoid killing the hen that is laying.
- 2d. To pick out the hen that is not laying.
- 3d. To know about how far advanced the hen is toward the laying point.
- 4th. To avoid wintering hens that are not likely to be good winter layers.
- 5th. To know how to select the hen having strong laying powers, for breeding purposes.
- 6th. To know the hen that has entirely lost her power of egg production.
- 7th. To know how to sort out the hens in summer or fall that have ceased laying for the year.
- 8th. To know the hen that has become weakened in her laying powers.
- 9th. To know how to buy hens in the early winter, that will make good winter layers, and dispose of them at a large profit after receiving their crop of eggs.

Illinois State Fair, Sept. 30 to Oct. 7, 1905

Springfield, Ill., October 3, 1905.
To whom it may concern: This is to certify that T. F. Potter has demonstrated to our entire satisfaction the Potter system of selecting the laying hen from the non-laying hen, and we are convinced that his system is absolutely certain.

A. G. Murray, Springfield, Ill., member Illinois State Legislature and Pres. Illinois State Poultry Association.
D. T. Heimlich, Jacksonville, Ill., has judged all leading shows for the past 15 years.

U. R. Fishel, Hope, Ind., White Ply. Rock Specialist.
J. Brinkman, 113 Adams St., Chicago, Ill., Poultry Judge.
F. H. Shellbarger, West Liberty, Iowa, Poultry Judge.

Don't Kill a Hen in This Condition.

W. A. Hoyt, Whitewater, Wis., Poultryman. H. H. Fike, Libertyville, Ill., of C. and F. White Wyandotte breeders. F. J. Phillips, Chicago, President Chicago P. S. H., Lakeside Bldg. Henry Steinmesch, St. Louis, Mo., General Superintendent of Poultry World's Fair, 1904. W. C. Pierce, Indianapolis, Ind., Editor Fanciers' Gazette and Poultry Judge. J. A. Leland, ex-President Illinois State Poultry Association.

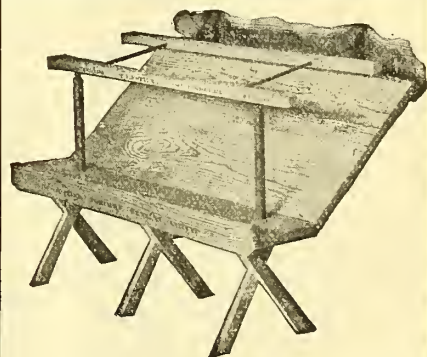

These are only a few of the gentlemen who took my system, and by reading over the names you will find that all these gentlemen are men who stand high among the poultry fraternity. Send for free circular telling all about the Potter System.

T. F. POTTER & CO. Box A, Downers Grove, Ill.

POULTRY HOUSE FIXTURES.

The Potter Portable Hennery Outfit
and Vermin Exterminator Roost

Within the past few years we have equipped hundreds upon hundreds of poultry houses in every part of the country with our apparatus. Poultrymen of every class use and recommend it, and pronounce our fixtures the most complete, convenient and satisfactory ever put on the market. Do not think of building a new house or renting the old one until you have secured a copy of our large 30-page catalogue.

The above cut shows but one of the three styles which we make. Outfits are made in 50 different sizes to fit any house. Better send for our catalogue and see what we are offering. Inclose one red stamp if you want it.

FINE YOUNG BUFF ROCKS

From high scoring stock for sale.

F. WHALEY TURNEY, MO.

Doane's Minorcas

are farm raised. Eggs from best matings \$1.50 for balance of season. Orders from ad direct promptly filled.

J. H. DOANE, Lock Box D, Gouverneur, N. Y.

Buff Wyandottes and Barred Rocks

Special bargains in breeding pens.

G. R. MORRIS LANARK, ILL.

AUTOCRATS OF SHOW ROOM AND UTILITY...

Black Minorcas—W. P. Rocks

Make a sweeping win at late New York Madison Square Garden Show. Four 1sts, two 2ds, including 1st and 2d pens on Minorcas and four 1sts, including 1st pen on Rocks. Grand total eight 1sts and one 2d out of possible 10 1sts in largest and strongest classes each variety ever shown in Garden. Grand chicks and pullets hatched direct from the winners after September.

Greystone Poultry Farm, Yonkers, N. Y.

Wiebke's S. C. Brown Leghorns

Chicago, Ill., January, 1905, 2d cock, 2d, 3d cockerel, 1st pullet, 1st pen, 10 specials on 8 birds. Madison Square Garden, Jan., 1905, 1st cock, 3d pullet. Winners of 30 1sts at Chicago, Indianapolis, Cleveland, Ft. Wayne, Eggs \$2 and \$5 per setting. Circular free. W. H. WIEBKE, Box P 2001, Ft. Wayne, Ind

Aluminum or copper, two sizes, adjust able to fit any fowl. Held by double lock They can't lose off. Initials, 10 cents per 100 extra. Also Pigeon Bands

THE SUPERIOR

Is securely locked; can't lose off; six sizes. State breed and sex. Price, postpaid, either kind, No. to suit, 12, 15c; 25, 30c; 50, 50c; 100, 80c. Sample for stamp. Circular free.

T. CADWALLADER,

Box 502, Salem, Ohio

100 Exhibition Cockerels For Sale From

Bennett's Barred Rocks

That in breeding and individual merit are the equal of any on the market. Won at Chicago, 1905, 1st pullet, 2d hen, 2d cock, 3d chl., 2d pen. Choice breeders for sale cheap, quality considered.

DR. O. P. BENNETT

Box 228, Mazon, Grundy Co., Ill.

POULTRY FENCE

that keeps stock out of your poultry yard, stands up stiff on few posts and requires no top rail or bottom board, is our specialty. You can't afford to buy poultry fencing without knowing more about the PAGE. Write us.

Page Woven Wire Fence Co., Box 5873, Adrian, Mich.

A Hen In It.

She was the first hatcher. You can't beat her. Siems learned how to use her and he put her in the

Natural Hen Incubator.

Nature's way. Exceeds all other incubator results at a fraction of the cost. 200 egg hatcher costs only \$33. Agents wanted. Money savers, money makers. For large or small poultry raisers. Write for plan. Catalog and 25c lice formula free.

Natural Hen Incub. Co., B-4, Columbus, Nebraska

Poultry Show Dates For 1905-6.

[We would be pleased to have the Secretaries of poultry show notify us of any errors or changes in the following list, as it is our desire to make this as near correct as possible.]

- Nov. 8-11—Bowie, Tex. Mrs. W. R. Stewart, secretary.
 Nov. 9-11—Enfield, Ill. D. T. Heimlich, judge; C. H. Wilson, secretary, Morris, Ill.
 Nov. 13-17—New York, N. Y. C. E. Gauss, secretary, Box 101, Flushing, L. I., N. Y.
 Nov. 13-17—Garnett, Kan. C. H. Rhodes, judge; Hattie A. Weld, Greeley, Kan., secretary.
 Nov. 14-17—Greenfield, Ill. W. S. Russell, judge; H. C. Smith, secretary.
 Nov. 15-30—Arcadia, Fla. Thos. J. L. Brown, president, Tampa, Fla.
 Nov. 16-18—Warsaw, Ill. W. S. Russell, judge; Paul Heise, secretary.
 Nov. 19-20—Bonham, Tex. Savage, judge; B. Smith, secretary.
 Nov. 20-22—Newton Falls, Ohio. Ira C. Keller, judge; C. H. Herner, secretary.
 Nov. 20-25—Gloversville, N. Y. Stanton, Zimmer, Drevenstedt, Spraker, judges; Jacob H. Blunck, secretary.
 Nov. 21-23—Forrest, Ill. S. B. Johnston, judge; Clyde Johnston, secretary.
 Nov. 21-24—West Haven, Conn. Nichols, Lambert, judges; E. J. Crawford, secretary.
 Nov. 21-24—Tabor, Iowa. W. S. Russell, judge; E. H. Harrison, secretary.
 Nov. 21-24—Muscatine, Iowa. B. S. Myers, judge; F. M. Zeigler, R. F. D. 7, secretary.
 Nov. 21-25—Tarkio, Mo. Thompson, judge; Gussie White, Fairfax, Mo., secretary.
 Nov. 22-25—Holyoke, Mass. Felch, Ballou, Shove, Pierce and Craggle, judges; George Barnett, Jr., 115 South St., secretary.
 Nov. 22-25—Milan, Mo. F. H. Shellabarger, judge; J. A. Niblo, Jr., secretary.
 Nov. 22-25—Carthage, Mo. C. H. Rhodes, judge; C. A. Emry, secretary.
 Nov. 22-23—Elsberry, Mo. Shaner, judge; M. P. Elsberry, secretary.
 Nov. 23-25—Warsaw, Ky. W. C. Pierce, judge; O. A. Bogardus, secretary.
 Nov. 24-25—Lampasas, Tex. Savage, judge; L. R. Sparks, secretary.
 Nov. 24-30—Charleston, S. C. Lea, Marshall, judges; T. J. McCarty, secretary.
 Nov. 27-29—Plainville, Kan. Rhodes, judge; C. E. Kinney, secretary.
 Nov. 27-Dec. 1—Sheboygan, Wis. Tucker, judge; A. H. McIntire, secretary.
 Nov. 27-Dec. 2—South Haven, Mich. Tucker, judge; Jas. L. Bonar, secretary, R. F. D. 1.
 Nov. 27-Dec. 2—Erie, Pa. W. C. Pierce, judge; F. E. Thompson, 451 West Tenth street, secretary.
 Nov. 27-Dec. 2—San Francisco, Cal. Holden, Orr, Burgott, Berran, judges; J. C. Williams, 25 New Montgomery street, secretary.
 Nov. 28-Dec. 1—Moline, Ill. J. M. Rapp, judge; Oscar Hogberg, 1409 Fourteenth street, secretary.
 Nov. 28-Dec. 1—Boonville, Mo. D. T. Heimlich, judge; Charles Miller, Box 702, secretary.
 Nov. 28-Dec. 1—Fairfield, Iowa. A. B. Shaner, judge; John R. McEliderry, secretary.
 Nov. 28-Dec. 1—Corfu, N. Y. W. F. Brace, judge; Chas. Phelps, secretary.
 Nov. 28-Dec. 1—Warren, Ohio. D. K. Moser, secretary.
 Nov. 28-Dec. 2—Great Bend, Kan. T. W. Southard, judge; Rev. S. Olinger, secretary.
 Nov. 28-Dec. 2—Mason City, Iowa. W. S. Russell, judge; M. V. Bickel, secretary.
 Nov. 28-Dec. 2—Hamilton, Ont., Can. John E. Peart, secretary, 31 Pine St.
 Nov. 29-Dec. 2—Corvallis, Ore. Robert Johnson, secretary.
 Nov. 29-Dec. 2—Sanatoga, Pa. S. J. Kurtz, secretary.
 Nov. 29-Dec. 2—Moult Sterling, Ill. Heimlich, judge; E. Hambaugh, secretary.
 Nov. 29-30—DeLeon, Tex. Savage, judge; R. T. Bowman, secretary.
 Nov. 29-Dec. 2—Dover, N. J. W. H. Biggood, secretary.
 Nov. 29-Dec. 2—Bridgeton, N. J. Louis G. Heller, superintendent.
 Nov. 29-Dec. 5—Delta, Ohio. Ira C. Keller, judge; M. B. Hatton, secretary.
 Nov. 30-Dec. 2—Spickard, Mo. Adam Thompson, judge; Leon A. Tracy, secretary.
 Nov. 30-Dec. 2—Danbury, Conn. Nichols, Drevenstedt, Card, judges; C. H. Brundage, secretary.
 Nov. 30-Dec. 2—Glenwood, Iowa. Shellabarger, judge; G. B. Van Horn, secretary.
 Nov. 30-Dec. 3—Jackson, Mich. Travis, Heck, judges; L. H. Hill, secretary.
 Dec. 2-6—Union, Iowa. Shellabarger, judge; O. E. Smith, secretary.
 Dec. 4-7—Henessey, Okla. C. A. Emry, judge; Homer A. Palm, secretary.
 Dec. 4-7—Antwerp, Ohio. Eugene Sites, judge; C. A. Bissell, secretary.
 Dec. 4-7—Rofe, Iowa. D. T. Heimlich, judge; Marion Bruce, secretary.
 Dec. 4-8—Marshalltown, Iowa. Hewes, judge; H. C. Hansen, secretary, 608 E. Church St.
 Dec. 4-8—Macomb, Ill. I. H. Sheets, secretary.
 Dec. 4-8—Lancaster, Mo. W. S. Russell, judge; Brice Hays, secretary.
 Dec. 4-9—Owensboro, Ky. W. C. Pierce, judge; D. O'C. Dougherty, secretary.
 Dec. 5-6—Easthampton, Mass. D. J. Lambert, judge; W. B. Drury, secretary.
 Dec. 5-6—Greenfield, Mass. Craggle, judge; B. Buffum Noyes, secretary, 84 Federal St.
 Dec. 5-7—Jackson, Mich. Travis, judge; C. W. Krooz, 220 Mansion street, secretary.
 Dec. 5-8—Portland, Me. Smith, Hawkins, Atherton, Coffin, judges; A. L. Merrill, secretary, Auburn, Me.
 Dec. 5-8—Auburn, Me. Smith, Hawkins, Atherton, Coffin, judges; A. L. Merrill, secretary.
 Dec. 5-8—Waverly, Iowa. A. B. Shaner, judge; B. L. Burbank, secretary.
 Dec. 5-8—Rising Sun, Ohio. Ira C. Keller, judge; Merle Rearick, secretary.
 Dec. 5-8—Leominster, Mass. Atherton, Shove, Hawkins, Woodward, judges; L. D. Mudgett, secretary.
 Dec. 5-8—Walden, N. Y. Drevenstedt, judge; H. W. Millsbaugh, secretary.
 Dec. 5-8—Huntsville, Ala. John L. Hay, secretary.
 Dec. 5-8—Palmira, Mo. C. H. Rhodes, judge; Maude Bloomer, secretary.
 Dec. 5-8—New London, Iowa. H. L. Pedrick, judge; F. L. Clawson, secretary.
 Dec. 5-9—Springfield, Mass. Felch, May, Shove, Delano, Pence, Watson, Ballou, Card, judges; L. S. Evans, secretary, 243 Worthington St.
 Dec. 5-9—Brookfield, Mo. Heck, judge; Dr. J. S. Hill, secretary, Purdin, Mo.
 Dec. 5-9—Bethany, Ill. S. B. Lane, judge; Walter Roney, secretary.
 Dec. 5-9—Emporia, Kan. Atherton, Dudley, judges; D. M. May, secretary-treasurer.
 Dec. 5-9—Providence, R. I. Ballou, Watson, Ball, May, Rowland, Twombly, judges; W. J. Brown, 6 Exchange Place, secretary.

 Dec. 5-10—Newton, Kan. Southard, judge; S. R. Behler, secretary.
 Dec. 6-8—Owosso, Mich. Tucker, judge; Bert Lovett, secretary.
 Dec. 6-8—Adams, Mass. John J. Caley, secretary.
 Dec. 6-8—Sand Creek, Okla. Fite, judge; C. L. Bickerdike, secretary.
 Dec. 6-8—Paterson, N. J. Stanton, Huyler, judges; James Handford, 452 E. 23rd St., secretary.
 Dec. 6-9—Alameda, Cal. Dixon, Hinds, judges; C. A. Tracy, secretary.
 Dec. 6-9—Taylorsville, Ala. Rigg, judge; James Hunter, secretary.
 Dec. 6-9—Waco, Tex. G. Knebel, judge; J. R. Davis, secretary.
 Dec. 6-9—Youngstown, Ohio. T. E. Orr, judge; Charles E. Watwood, secretary.
 Dec. 6-9—Craig, Mo. Shellabarger, judge; E. A. Kellogg, secretary.
 Dec. 6-9—Carlisle, Pa. Cornman, Minnick, judges; Geo. L. Hoffman, secretary, 52 W. Louthier St.
 Dec. 6-9—Stewartville, Minn. Holden, judge; L. G. Tubbs, secretary-treasurer.
 Dec. 7-9—Marshall, Tex. Savage, judge; K. A. Powers, secretary.
 Dec. 7-9—Lacon, Ill. Heimlich, judge; John Watt, secretary.
 Dec. 7-9—Crookston, Minn. Rankin, judge; R. C. Kirsch, secretary.
 Dec. 7-12—Stanberry, Mo. Russell, judge; Robert Larmer, Ravenwood, Mo., secretary.
 Dec. 8-9—Elgin, Tex. R. A. Davis, judge; A. J. Jarmon, secretary.
 Dec. 11-15—Davenport, Iowa. James A. Tucker, judge; J. P. Voss, secretary.
 Dec. 11-16—Oconomowoc, Wis. Fr. Heck, judge; Dr. H. J. Larson, secretary.
 Dec. 11-16—Warren, Ill. Shellabarger, judge; B. L. Wright, secretary.
 Dec. 11-16—Fort Wayne, Ind. T. E. Orr, judge; Philip A. Heller, secretary.
 Dec. 11-16—Rochester, Minn. George D. Holden, judge; Louis E. Nietz, secretary.

POULTRY SHOW DATES—CONTINUED.

- Dec. 11-16—Dwight, Ill. Ben S. Myers, judge; H. A. Wood, secretary.
 Dec. 11-16—Ottawa, Ill. Rapp, judge; C. O. Deist, secretary.
 Dec. 11-18—Elwood, Ind. S. B. Lane, judge; S. W. Swihart, secretary.
 Dec. 12-14—Milford, Mass. J. P. Remick, secretary.
 Dec. 12-14—Falmouth, Mass. I. K. Felch, judge; R. E. Small, secretary.
 Dec. 12-15—Quincy, Mich. McClave, judge; A. L. Massey, secretary.
 Dec. 12-15—Monroe, N. C. Marshall, judge; T. F. Dillon, secretary.
 Dec. 12-15—Salem, Ore. C. D. Minton, secretary.
 Dec. 12-15—Birmingham, Ala. Johnston, judge; Charles Barber, 216 Twentieth street, secretary.
 Dec. 12-15—Flint, Mich. T. E. Orr, judge; F. P. Wildman, secretary.
 Dec. 12-15—Farragut, Iowa. Todd, judge; W. S. Roberts, secretary.
 Dec. 12-15—Eau Claire, Wis. Rankin, judge; R. C. Burgar, secretary.
 Dec. 12-16—Chicago Heights, Ill. Greer, judge; Harry Neath, secretary.
 Dec. 12-16—Temple, Tex. Savage, judge; Mrs. W. E. Matthews, secretary.
 Dec. 12-16—Decatur, Ill. Lane, judge; F. L. Stevenson, secretary.
 Dec. 12-16—Lawrence, Kan. Atherton, judge; John Manwaring, secretary.
 Dec. 12-16—Lohrville, Iowa. Shaner, judge; J. O. Ratcliffe, secretary.
 Dec. 12-16—Clarinda, Iowa. W. S. Russell, judge; Brady Ustick, secretary.
 Dec. 12-16—Chariton, Iowa. Pedrick, judge; J. O. Becker, secretary.
 Dec. 12-16—Waverly, Iowa. B. L. Burbank, secretary.
 Dec. 12-16—Kirksville, Mo. Hewes, Rhodes, Emry, judges; H. P. Mason, Fayette, Mo., secretary.
 Dec. 12-16—Loveland, Colo. Heimlich, judge; J. P. Newman, secretary.
 Dec. 12-15—Kingston, N. Y. Drevenstedt, judge; F. E. Miller, Rifton, N. Y., secretary.
 Dec. 12-15—Hamden, Conn. Nichols, judge; W. W. Gale, secretary.
 Dec. 12-15—Bristol, Tenn. D. M. Owen, judge; R. L. Cannon, secretary.
 Dec. 12-16—McCune, Kan. J. S. Hughes, judge; H. I. Dolson, secretary.
 Dec. 12-16—Blandon, Pa. Wittman, Litzenberger, Snyder, judges; E. G. Wilkinson, secretary.
 Dec. 12-16—San Diego, Cal. Herbert M. Stiles, R. F. D. 1, secretary.
 Dec. 12-16—Beverly, Mass. Lambert, Watson, Flanders, Atherton, Edwards, judges; D. P. Foster, secretary.
 Dec. 12-16—Corsicana, Tex. Savage, Davis, judges; C. E. Papworth, secretary.
 Dec. 12-16—Holland, Mich. Chas. McClave, judge; L. S. Spletsuma, secretary.
 Dec. 12-16—Brocton, Mass. Graves, Atherton, Bryant, Wheeler, Forbes, Benson, Rogers, Smith, judges; G. S. Hutchinson, secretary.
 Dec. 12-17—Belleville, Ill. Campbell, judge; D. O. Thomas, secretary.
 Dec. 12-17—Jacksonville, Ill. D. T. Heimlich, judge; L. O. Vaught, secretary.
 Dec. 12-16—Rutherford, N. J. W. J. Stanton, C. M. Smith, judges; E. J. Irwin, secretary.
 Dec. 12-16—Downers Grove, Ill. Harral, Dietz, Kline, judges; Geo. M. Kline, secretary.
 Dec. 12-21—Atlanta, Ga. Marshall, Johnston, judges; C. O. Harwell, secretary.

POULTONA

Unexcelled for run-down poultry. Can't be beat Guaranteed. A few Buff Orpingtons and Wyandottes for sale. A. E. GREEN, Morgan Park, Ill.

Winter eggs are secured by having the hens in perfect condition. Pratts Poultry Food is a conditioner that never fails.

Bair's Barred Rocks

Daily proven leaders for exhibition and utility. Lady Pan, the world's greatest hen, has 11 blue ribbons and largest egg record of any living hen. Over 400 premiums won in four years at America's leading shows, including Pan-American exposition and World's Fair. If your lines need strengthening I have very choice exhibition and breeding cockerels.

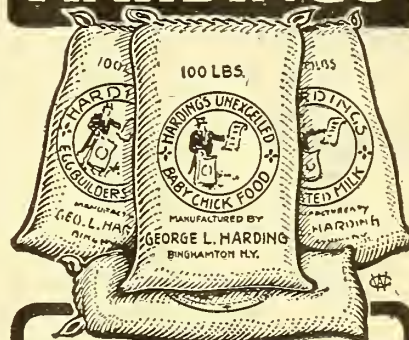

L. O. BAIR. Mt. Washington, Mo.

BUFF ROCK WINNERS

In strongest competition can be had of H. P. Mason, the Buff Rock Specialist, Fayette, Mo. Won more prizes at the World's Fair than any other Buff Rock breeder. They win for me, they win for my customers. Show birds a specialty. Prices right.

H. P. MASON - FAYETTE, MO.

COLORADO ALFALFA MEAL

Milled in Colorado—Free from Adulterations—Especially put up for Steinmesch Feed and Poultry Supply Co., St. Louis, Mo.

THE VALUE of Alfalfa as a feed was not generally known until Mr. F. A. Coburn, Secretary of the Kansas State Board of Agriculture, recommended it very highly. The Chemical Division of the Canada Experiment Station at Ottawa; the Agricultural Experiment Station of Minnesota; and a number of Agricultural Colleges took it up and gave it a more thorough test, not only in analyzing same, but also in actually feeding it to cattle, swine and poultry. These tests showed that Alfalfa was very rich in Protein—about 17 per cent against only 13 per cent in Red Clover. In the practical test of feeding it assisted in the digestion of all concentrated feed and in the feeding of poultry it promoted health, vigor and fertility of eggs. Our own experience showed that it gave us grass conditions whenever we used Alfalfa Meal, and this in our opinion is the strongest argument in its use for poultry. It is inexpensive because it is bulky—100 lbs. will measure out 6 bu. dry measure.

Ask for STEINMESCH WINTERGREEN ALFALFA MEAL. Price 100-lbs., \$2 Price 500-lbs., \$8.50. The finest Alfalfa Meal made. Sample free.

Steinmesch Feed and Poultry Supply Co. 309 Market St., St. Louis, Mo.

Questions and Answers

Questions asked by subscribers will be answered in this department.

All communications for this department must bear the signature of the writer, otherwise they will not be answered. In publishing questions we use only the initials.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer the following question through your POULTRY JOURNAL.

I have some Leghorn, Plymouth Rock and Minorcas chickens, four and five months old. They had a kind of hard yellow skin or sore in the corner of mouth, on and under part of tongue. I pulled skiu off and put on vaseline. Some would be just as bad in a few days. A few were so bad they died, but rest got all right. Please be kind enough to tell me what the trouble was and remedy for same. T. F. M.

Charleston, S. C.

Answer.—Your chickens had canker. This is brought on by a cold. The use of coppers in the drinking water is both a preventive and cure for this disease. There are also several good remedies advertised in these columns.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer through your "questions and answers" department, Should turkeys hatched from eggs from Standard bred Mammoth Bronze Turkeys have streaks and splashes of white on their wing feathers? The turkeys are a late hatch, latter part of June, and are just now getting their second feathers. Lima, Ind. Mrs. C. B. T.

Answer.—The wing of a Bronze Turkey should be evenly barred with parallel bars of black and white. See description in new Standard of Perfection.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Kindly answer in the JOURNAL under "Questions and Answers" the following: Several of my Leghorn hens have commenced to make a noise between a sneeze and a cough, shaking their head when doing so. They wheeze and sound like an asthmatic person breathing. At night they sound as if they were snoring. Heads do not swell. Have no discharge from nose or eyes. Occasionally mouth is full of a slimy substance like saliva. I have fed them on onions and dosed with coal oil, and sulphur and lard, but with no success. They do not act sick, eat well and scratch and hunt for food and sing in between their sneezing spells. What is the matter and the remedy? I feed boiled vegetables made into a mash with shorts and bran in the morning and wheat, oats, peas, beans or sunflower seed at night. They have free range now. 2. I had a large three-year-old hen die the other day. Sick about two weeks. Just stood around and moped. Would not come to eat when I fed the other hens. I cooped her up with some other hens for two days, intending to sell, but as the price of chickens was low I turned them loose again. At that time she seemed in perfect health and weighed

five pounds. Two days afterwards she commenced to mope. I cut her open after death and found the liver very large and small white spots the size of a pin all over it. The heart was very small; no larger than that of a young fry. The gizzard was full of oats and only one stone in it; the crop full of oats and wild seed; the bowels entirely empty, and on cutting her open she seemed full of yellowish water and no blood. What was the matter? 3. Last spring we found a Brown Leghorn hen dead on the nest. Upon opening her found her bowels inflated with wind. Near the vent the bowel was all red or inflamed. No eggs except small ones and one which would not be ready for a couple of days. All other organs in good condition. Can you tell what caused her death? She was perfectly well the day before or seemed so at least. M. R. S.

Snohomish, Wash.

Answer.—1. The symptoms given are those of a cold which has settled in the bronchial tubes and the wheezing sound is caused by mucous gathering along the air passages. Place the affected birds in a dry and reasonably warm place. Give soft and cooling food, such as stale bread, or a mixture of bran and middlings, moistened with milk. Inhalation of steam or vapor from boiling water in which hops or a small quantity of carbolic acid or creoline has been placed is very beneficial. Give with the food two grains of black antimony twice a day. Honey or gum arabic may be added to the drinking water with advantage. 2. Congestion of the liver. The symptoms of this disease are so obscure that it is very difficult to detect it until the disease is so far advanced that medicine will do no good. If the disease is suspected in time for treatment give sulphate of magnesium or sulphate of sodium in a purgative dose (20 grains to dram) and follow with sulphate of magnesium, 10 grains, and bicarbonate of soda, 2 grains, repeated daily for a week. The disease should be prevented by proper feeding and regular exercise. 3. Apoplexy.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: As I have just received my first copy of your paper I would like to ask a few questions, as I am a new beginner in hatching in an incubator: 1st, Why do my little chicks come out of the shell before they absorb the yolk? They seem to be too wet. Why do so many die in shell after they are nearly grown? 2d, Can some one give me a cure for gapes in young chicks? Fayetteville, Ark. Mrs. J. C.

Answer.—Too much heat and a lack of cooling down. During warm weather eggs should be cooled for at least a half hour each day after the eighth or ninth day. The chick must have fresh air and no way can this be supplied so well by taking the eggs out of the machine each day and allowing them to cool for from

SMITH & CO., UTICA, N. Y.**

When you can just as well save money, what's the use of going to needless expense and doing twice as much work as is necessary to get the same and even better results? The best grit for fowls is that which is not only used in the grinding process but which also contains material that can be assimilated by the bird's system and used in nourishing and strengthening the bodily organism.

Pearl Grit

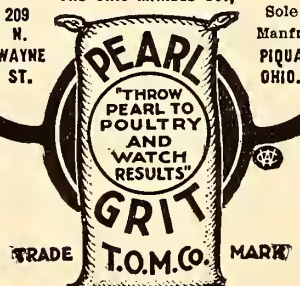

grinds and grinds well—it's a true grit. It grinds to the very last particle—always sharp. It also combines all the essential qualities of shells and grit. No other shell-making material is needed when you feed Pearl Grit to poultry. It contains 60 per cent Calcium Carbonate (lime), 14 per cent of Magnesium, and Iron, Silicon, Sulphur, Aluminum Oxides and other properties which make it an ideal article for the poultryman.

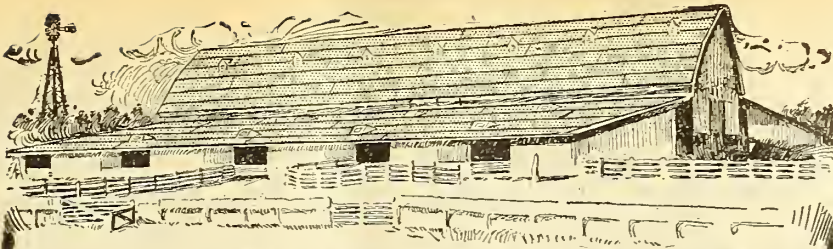

It builds up the system; makes strong, prolific fowls and healthy young chicks. It is clean—white—has no dust and no waste. Guaranteed to do just as we say. We'll prove our claims by actual tests, chemical analyses and the testimony of those who use it. A fair trial will convince you that Pearl Grit is the best and most economical grit the poultryman can use. Write for prices. Do it now.

Roofed With Paroid Roofing

Many of the largest farm and poultry buildings in the country as well as government and railroad warehouses, factories, etc. are now roofed and sided with Paroid Roofing. The above illustration shows the largest stock barn in Minnesota, covered with Paroid. In spite of cheap imitations it grows in popularity, because every one who uses it finds it economical, extra strong, durable and thoroughly satisfactory. Make no mistake—get Paroid.

Light slate color; contains no tar; does not crack nor run, does not taint rain water, keeps buildings dry and warm, looks well, lasts long, spark, water, cold, heat, smoke and gas proof. That's why it's so popular.

Sample Free. To show you exactly what it is we'll send you a free sample and name of nearest dealer. Investigate now. For a 2 cent stamp we'll send book of building plans for poultry and farm buildings.

Cash Prize Money

Have you made application to enter the great *International Egg-Laying Contest* yet? If not, you are delaying an opportunity to win a nice cash prize and at the same time gain a great deal of valuable experience in feeding to increase your egg supply. The object of this contest is to demonstrate, by a series of systematic tests, to what extent it is possible to make hens lay more eggs by feeding "*International Poultry Food*"—a well-known egg-making food of great efficiency. Remember these cash prizes are \$1.00 per hen fed

100 HENS—100 DOLLARS

and will be awarded to two classes—to boys and girls under 17 years, and to adults. Some remarkable increases in egg results from feeding "*International Poultry Food*" have been reported to us, but we desire to get tangible evidence from a series of competitive tests under conditions as they are found on the farm, and are willing to pay well for your help in this Contest. Remember we have said that one extra egg per hen per month will more than repay the

Doubled the Egg Production

"I bought a package of *International Poultry Food* of my dealer and since using it we get almost twice as many eggs." Henry Frich, Clayton, O.

cost of feeding "*International Poultry Food*." If it will increase your supply 10 extra eggs a month, 9 of them will be clear profit—108 eggs a year per hen clear profit without a cent of cost or a bit of extra labor. "*International Poultry Food*" is prepared from powdered roots, herbs and seeds, and is a safe medicinal preparation to mix in small amounts with regular feed. It purifies the blood, stimulates the egg-producing organs, and insures healthy chickens. We guarantee results and refund money if "*Food*" doesn't make good our claims. Write for entry blank, full information how to win these prizes and free book, "*Money in Poultry*." Boys and girls, men and women, this is an opportunity not to be neglected, so write today. When you write mention this paper, we will send free a beautiful picture in 6 colors of the famous *Fisher \$500 Rooster*. Address *Poultry Dept., International Stock Food Co., Minneapolis, Minn., U. S. A.* Also Toronto, Can.

"International Louse Killer"

is put up in a round sifting box.

"International Louse Killer"

Easy to use and a perfectly safe powder.

15 to 30 minutes. 2d. There are a number of cures for gapes advertised in these columns ever season, and same can be procured from any poultry supply house.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer the following in your next number. Wouldn't a cross between a White Plymouth Rock male and White Leghorn females, make a good fowl for laying and market use?

Cornell, Ill.

M. S. W.

Answer—We do not advocate the crossing of these two varieties, as you would get a bird of inferior quality for both market and eggs.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you please answer through your paper if White Wyandotte cockerels caponized would make good capons for the market or is the Barred Rock only preferable?

E. S.

Kewaunee, Wis.

Answer.—White Wyandotte cockerels make good capons.

Editor AMERICAN POULTRY JOURNAL.

Find enclosed sample of some buckwheat. Kindly advise me through the columns of your paper if the same is all right to feed hens; and if so, how much should be fed them and how often?

Cumberland, Md.

Answer.—Buckwheat like samples submitted will make good feed for hens. A small handful to each bird, three times a week.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please tell me in the next issue of your POULTRY JOURNAL what ails my ducks. They were hatched on June 18. They did finely until about grown, then would find one or two that would be unable to walk; would get up and start to run and fall down; some would die right away, others revive and apparently recover, have lost 10 out of the 18. Have fed oats, wheat and cracked corn. Would the drakes be the cause of the trouble? 2. How can drakes be distinguished from ducks? Am very anxious to find the cause of this trouble, also the remedy. 3. Should S. C. Rhode Island Red hens show black feathers in tail or what are the points in pure blood R. R. hens?

W. R. S.

Middlebury Ind.

Answer.—1. The trouble with your ducks, beyond doubt, is overfeeding, or feeding too much grain, which brings on apoplexy. Feed your ducks a mash and plenty of vegetable matter. An exclusive diet of whole grain is not good for ducks. 2. It is the duck that goes "Quack, quack!" The drake makes a low, whistling noise, but never quacks. The drake also has two small feathers on the back, just in front of the tail, that curl up. Ducks do not have these feathers. 3. The tail of a S. C. Rhode Island Red hen should be black, except two top feathers, which may be edged with red. The new Standard of Perfection will give you the desired information and description. Price, including one year's subscription to AMERICAN POULTRY JOURNAL, \$1.50. Sent on receipt of your order.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please tell me what is the matter with my Light Brahma rooster. On damp days he puts his tail down between his legs. Has a good appetite; his legs seem to be strong. Once in

a while a little green matter comes out of his nose. Please tell me what is the matter and give remedy. D. C. M.
Dryden, Mich.

Answer.—It is probable that the strain of putting on new feathers has been too severe on him. Put him in a coop by himself and feed him a little meat three or four times a week; also feed him plenty of nourishing food and give milk to drink.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you kindly tell me in your "Question and Answer" department whether Buckeye is the standard name for the American Reds. We understood they were admitted to the Standard, but only find the Rhode Island Reds. C. W. C.

Waterville, Minn.

Answer.—No. The Buckeyes are a distinct variety. Neither the American Reds nor the Rose Comb Rhode Island Reds are in the new Standard. This matter will probably be settled at the coming American Poultry Association meeting at Cincinnati.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Can you tell me what was wrong with a White Leghorn cock that I purchased last winter? He has never seemed as bright as he should and about a month ago he began to go blind so that he could not find his feed unless it was in some vessel. I fed him regular, but he just wasted away, although he seemed to eat lots, too, and finally died. His comb and wattles were perfectly colorless. I also have another young cockerel that seems to have some-

thing in his windpipe. I took a feather and swabbed its windpipe with kerosene and got a bloody discharge on the feather. C. F. G.

Lewellen, Neb.

Answer.—This is what is known among poultrymen as "going light," but is consumption in its worst form, and as there is no cure for it the bird should be killed and the body burned, and the premises thoroughly disinfected with a strong solution of carbolic acid. You do not give enough detail about your young cockerel.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Will you please answer in your next issue the following? I have of late found several very small eggs in the nests. What is the cause of this? Are they pullet eggs or not? Kirk, Colo.

Mrs. J. E. A.

Answer.—These may be pullet eggs or they may not. Very frequently the last egg that a hen lays in the fall is very small.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer the following: We recently lost a hen that was in good order, seemed well when she went to roost, but very soon began to gasp and fell dead. We brought her to the shed and there over a half pint of water run from her mouth. Please tell me what the trouble was. I wish I could see more in the POULTRY JOURNAL about turkeys. In raising little turkeys is where we have trouble. After they are three or four weeks old they begin to dump. The white of the dropping keeps getting yellow until it is orange color; the rest

of the droppings seems healthy until the last stage, when there isn't much but the yellow. They die in terrible distress, judging from the shape they draw themselves into. I would like to know of a preventive and cure. Miss N. A. L.

Cory, Pa.

Answer: Unless we have more details in regard to the appearance of the intestines of the hen it will be impossible for us to give an intelligent answer as to the cause of the death of this fowl.

In regard to turkeys, see answer to Mr. D. M. W.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: I have four geese which are now about five months old and I cannot ascertain which are male birds and which are females. Please advise me how to distinguish them. F. L. B.

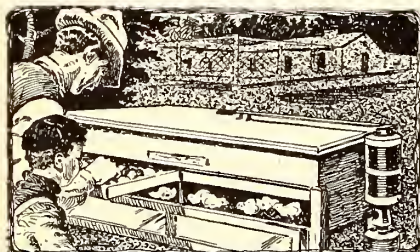

Grace Dale, Pa.

Answer.—See answer to E. L. C. in this issue.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer in POULTRY JOURNAL the following questions:

I had my chickens on a farm with a small flock of other chickens, among which were two barred P. Rock roosters. One had scaly leg quite bad and the young chicks run with the old ones. Some of the young chicks' feet would get sore and look like blisters, and their heads, also the top of the bill, would look like a blister when first sore, then as they healed the shell of the bill would come off, and after the feet get well the toes seem to turn up. What was it? Was it from the scaly leg? The chickens had a clean house and dry run.

THE

American Incubator

is the hatcher you want because it is built to hatch more and stronger chicks than any other machine made. We have no fine spun theories to tell you about, no marvelous inventions—nothing but simple, practical hatching features. Your one aim is

PROFITABLE RESULTS

and we guarantee that you can get these results quicker, easier and with more certainty with an American Incubator than any other machine.

Because it keeps the eggs that are put into it just at the right temperature all the time, day and night, week after week. It can do that because it has the best lamp and heating system ever devised. It has five thicknesses of wall so that no heat can escape and it has an automatic regulator that really does regulate. It has the only ventilating system that supplies the egg chamber with fresh air constantly without cooling the eggs.

Sold at Lowest Prices on 90 DAYS FREE TRIAL

because we know that it will more than fulfil our claims. Construction, material and workmanship, all illustrated and described in our

LARGE FREE CATALOGUE.

Sent postpaid on request. It is full of just the information you need to succeed. It lists our complete line of poultry supplies.

AMERICAN INCUBATOR COMPANY,
10 Mrs. St., Freeport, Illinois.

To Raise Chicks for Profit

get right down to a business basis at the start and buy the incubator that will give you the best returns for your money.

Don't be influenced by theory, don't consider appearances, don't look to anything but Results. The all important thing is to get the machine that you can control, that you can depend upon in the way of keeping the temperature in the egg chamber at exactly the correct point, not too hot or too cold. And see that ample provision has been made for thorough ventilation along natural, common sense lines.

You can't fail to succeed if your machine is right in these two features.

The same principles apply to brooders, only more. In a brooder you've got to consider roominess and cleanliness as well as heat and ventilation.

Read the description of the American Incubators and Brooders on either side of this column. Notice the experience that has been put into them. Above all things, notice the guarantee that goes with them, which is backed by the great factory and all the capital of the manufacturers. That protects you against loss, disappointment, discouragement. Now, from a businesslike standpoint, looking at it from a dollars and cents point of view: can you afford to speculate or experiment when an absolute certainty like this offer comes your way? We leave it to your good judgment.

Send for the book which will put you on the right track regarding all poultry matters. It is sent free, postpaid, to all those interested.

The American Brooder

Raising the chicks you hatch is where the big end of the profit lies. Put them in an American Brooder and raise them all. It is guaranteed to raise a larger per cent of strong, vigorous chicks than any other brooder and you can be the judge.

Sold on

90 DAYS TRIAL,

and if it is not perfectly heated, regulated, ventilated, roomy, convenient and economical of fuel, send it back and get your money. It is heated by hot air, the only natural, safe way and the heat circulates from the top down to the chicks as nature intended. No crowding, no tramping. Two compartments—a hatching and exercising room. Opens from the top, easy to clean and proof against dampness and vermin.

American Incubators and Brooders grew out of 30 years of practical experience in hatching and raising thoroughbred poultry. We are still in the poultry business, operating the largest thoroughbred poultry plant in the country.

Send for free catalog of incubators, brooders and thoroughbred fowls and eggs, illustrating and describing everything the poultry raiser needs at very lowest prices.

AMERICAN INCUBATOR COMPANY,
10 Mrs. St., Freeport, Illinois.

2. Is there anything to feed poultry so they will moult faster? Mine are very slow. If so, what is good for them?

3. Have three hens that are moulting and they make kind of a choking noise; eat well and look well. Is it roup and what is good for them? MRS. G. L.

Cliff, Colo.

Answer:—1. From the description given we are of the opinion that your chicks are suffering from a mild form of scabie. This is usually brought about by filthy quarters and improper feeding, not necessarily in your hands but at some former time. The parent stock have inherited this disease and it is now showing in the young stock. Fowls that have been afflicted with this disease should not be bred from, but disposed of in some manner so that the disease will not be carried into other flocks.

2. By feeding liberally on sunflower seed the molting process will be greatly hastened.

3. Read answer to M. R. S. in this issue.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please advise me what are the best breeds of chickens to buy for laying? H. P. S.

Easton, Md.

Answer: Any of the non-setting varieties are the best for laying purposes, such as the Leghorns, Minorcas, Hamburgs, etc.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please answer the following questions in your next issue? What is the disease that has attacked my turkeys and what is the remedy for same? They begin to droop around for

two or three days, will eat the first few days, then they refuse to eat. They get weak and very thin in flesh and droppings are a thin yellow; some of them live more than a week. I do not think they are lousy; do not feed them much only what they get in the fields.

Do you know anything about Turkey-Lene? Can you recommend it to be any good for them. Mr. D. M. W.

Shaftsbury, Mich.

Answer: Your turkeys are afflicted with what is known as Entero-Hepatitis or Black Head. The cause of this disease is a parasite which is taken into the digestive organs with the food or drink; and as the symptoms are not very pronounced in the first stage of the disease the fowls may be affected for some time before it is noticed. In the last stages of the disease there is a peculiar discoloration of the head, which has led to the popular designation of "Black Head."

There is no absolute cure for this disease, and the treatment must be principally of a hygienic and preventive nature. Where the disease has got a thorough footing, the roosting places, runs and feeding grounds must be thoroughly disinfected, and all stock upon the premises disposed of. For a disinfectant use a solution of carbolic acid five parts to one hundred parts of water. Where the disease has not been of long standing it would be well to try some of the following remedies:

Sulphur 5 to 10 grains; sulphate of iron 1 grain may be combined and given in one dose, or give benzonaphthol 1 grain, salicylate of bismuth 1 grain. Or give sulphur 10 grains, sulphate of iron 1 grain, sulphate of quinine 1 grain.

Hyposulphite of sodium may be used in doses of 2 to 4 grains, or betol in the dose of 1 grain. It is necessary that such remedies be repeated two or three times a day and continued for considerable time to obtain results.

We have had no personal experience with Turkey-Lene, but from reports we understand it is an excellent thing for turkeys.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: Please tell me through your "Question and Answer" column how to determine sex in geese? And also whether full-blood Toulouse should show white-markings. E. L. C.

Bridgie, Minn.

Answer.—It is almost an impossibility to distinguish the sex in young geese. The voice of the female is coarse and the male has a thicker neck and a generally masculine appearance. The tip of the feathers of the tail should be white.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please answer in Question and Answer columns the fol-

A Rare Opportunity for Fanciers

Desiring to devote more time and space to the development and perfection of my strains of Leghorns I have decided to offer for sale my entire flocks of

Partridge Wyandottes

Silver Penciled Wyandottes

Including all breeding pens, pairs, trios and single birds—reserving none; and if either variety is sold to one purchaser will sell also the name and good will of the **Cornell-Brackenbury-Wyckoff Strains**. Sale will include all of my **World's Fair prize winners**, all recent winners at Madison Square Garden, New York State Fair, Trenton Inter-State Fair and Hagerstown, 1905 Shows. These birds have a **world wide reputation** back of them.

I prefer to sell the flocks intact and will not consider offers for less than entire flock of either variety before Dec. 20, 1905. After that date, if flocks are not sold, will sell single birds, pairs, pens, trios or any combination. No better opportunity was ever offered to the fancier for obtaining a national reputation in poultry from the outset.

E. G. WYCKOFF

Box 106 C, Ithaca, N. Y.

Big Sale of High-Class Exhibition Birds

I have succeeded in raising more good birds this season than ever before, and I can furnish winners for any kind of company, also line-bred breeding birds that will produce high-class youngsters. I have for sale something over 2000 Silver, Golden and White Wyandottes, G. S. and S. S. Bantams. No use to look for better, they don't grow them. If you only knew just how many of the BIG SHOW winners came from my yards each season you would then be convinced that

JONES, THE WYANDOTTE MAN

furnishes the foundation of more good flocks than any breeder IN THE WORLD. That is why my STRAIN is conceded

THE STRONGEST BLOOD LINES ON EARTH

No use for me to try to tell you here how many times they have won and at how many national shows. It would take half the pages of this journal, but send four cents in stamps for my handsome 36-page catalogue, printed in colors and containing many half-tones of the best Wyandottes that ever lived; full of valuable information on feed, care and how to mate for best results; a book worthy a place in any library. Don't fail to get a copy.

BUFF Plymouth ROCKS

THE GOLD MEDAL STRAIN—THE KIND THAT ALWAYS WIN

Winning at Michigan State Fair, Detroit, September 11-16, 1905, five 1sts and three 2ds, which shows that my birds are again in the lead. 2000 youngsters, some of the finest I ever raised, ready for shipment. Write your wants early and secure a good breeder or show bird. Good breeders \$2, \$3 and \$5 each. I also have all of my last season's winners, many of them will be among the winners this season. Among them are ten cocks, all winners; fifteen hens, all winners. Don't delay but order today. Satisfaction guaranteed. Booklet free on request. Show birds a specialty. Please mention this paper.

DEARBORN POULTRY YARDS

S. D. LAPHAM, Prop., Dearborn, Mich.

JAPANESE BANTAMS and SILKIES

I have a number of birds in Black Tailed, Black, White, Silver, Golden and variegated Japanese Bantams and Japanese Silkies that I will sell cheap during the next 30 days. They are bred from my World's Fair and Chicago winners, but I haven't house room for all of them, so am making bargain prices. Can sell you breeders or winners for the winter shows in any competition. State just what you want and I will give description and prices.

LONG TAILED JAPANESE YOKOHAMAS

A new and handsome Japanese fowl. Hardy and great layers. Tails of yearling cocks reach remarkable length of 3 to 5 feet. Saddle feathers reach the ground. Young pairs at only \$5, \$8, \$10 and \$15 per pair.

FRANK W. RADFORD, Box A, OSHKOSH, WIS.

OAK BLUFF LIGHT BRAHMAS & PARTRIDGE WYANDOTTES

Won at Cedar Rapids and Iowa State Fair in hot Competition

Light Brahmas at Cedar Rapids:—1st, 2d cocks, 1st, 4th hens, 1st, 2d cks., 1st, 2d, 4th pullets, 1st pen, sweepstakes cup. At Iowa State Fair, 1st cock, 1st, 2d hen, 1st, 2d ckl., 1st, 2d pullets, 1st pen of fowls, 1st pen of chicks.

Partridge Wyandottes at Cedar Rapids:—1st, 2d cocks, 2d, 3d, 4th hens, 1st, 2d, cks., 1st, 2d, 3d pullets, 1st pen, sweepstakes cup. At Iowa State Fair, 1st cock, 2d hen, 1st 2d cks., 1st, 2d pullets, 1st pen. I can furnish you fine exhibition stock and elegant breeders at moderate prices. Everything carefully pedigreed. Let me know what you want. I am sure I can please you.

lowing: Will 40 acres of ground raise the necessary food and keep 400 hens and their increase, and two cows and a horse, besides growing fruit and some vegetables? M. E. N.

Cranberry Lake, N. Y.

Answer: This all depends on the man who has charge of the place. If he is a competent man and thoroughly understands his business he will have no trouble in growing enough grain for the stock mentioned.

POULTRY AND FARM BUILDING PLANS.

One of the best free books of the season is that offered by F. W. Bird & Son, East Walpole, Mass., manufacturers of Paroid Roofing. They will send to all those interested a book of complete plans for poultry and farm buildings, free of any charge, except a 2-cent stamp to cover postage.

Such plans as these are in great demand, and we know that many of our readers will want to take advantage of this opportunity and receive one of these books. It doesn't matter whether you intend to erect an elaborate building or just a simple poultry shed, you'll find in this book drawings that will give you valuable suggestions and substantial help. It is just as valuable as a guide to one who is going to remodel or add to a building also.

The object of this book is to attract attention to Paroid, the old reliable, ready roofing and siding that has come into such general use throughout the country by farmers and poultry raisers. The manufacturers are justly proud of the fact that Paroid is extensively used by the United States government on some of its experiment station buildings, stables, barracks and warehouses. Transportation companies are using it also because of its economy, durability and its being proof against sparks and cinders. These features strongly appeal to farmers, too, and in addition the fact that it contains no tar and will not taint rain water. Besides it is a very simple matter to lay it, as it comes in rolls, and each roll contains a complete roofing kit.

And, by the way, F. W. Bird & Son were the originators of this admirable plan of furnishing fixtures for applying roofing and siding in each roll.

But, to get back to the collection of building plans, we know that this is a book that every farmer and poultry raiser who is thinking of building ought to have, and we suggest that such of our readers write to F. W. Bird & Son, East Walpole, Mass., enclosing a 2-cent stamp and requesting that one be sent to them.

THAT LIGHTING QUESTION AGAIN.

As the days grow shorter and the evenings longer, the lighting question comes up again. Living, as most of our readers do, beyond the smoke line of the cities, out in God's country, gas and electricity are out of the question.

In fact, the farmer must choose between kerosene, gasoline and acetylene for light, and gasoline and acetylene have made such a record for danger and bother that we know our readers will be glad to hear of a kerosene lamp that combines practically all the best features of the gas and electric light and yet gives that soft, rich, restful quality of light for which kerosene oil is so justly famous.

This lamp, which is made by the Angle Manufacturing Company, 78-80 Murray street, New York, involves an entirely new principle of burning common kerosene which does away completely with the smoke, odor and bother of the old style lamp.

We should like to explain this principle here, but it would take rather too much space, and the Angle Manufacturing Company's catalogue, which will be sent free on request, explains it very much better than we could. But you will get a good idea of how entirely different the Angle lamp is from the ordinary kind from the fact that such people as ex-President Cleveland, the Cookes, Carnegies, Rockefellers and the editors and owners of the best farm papers use these lamps for lighting their homes and estates in preference to gas, electricity, gasoline, acetylene or any other system.

We would certainly advise our readers to communicate at once with the Angle Manufacturing Company, 70-80 Murray street, New York City.

J. C. FISCHEL & SONS NEW CATALOGUE.

J. C. Fischel & Son, of Hope, Ind., the White Wyandotte breeders, will send for two 2-cent stamps their new catalogue. This is beautifully illustrated and contains instructions how to feed and care for White Wyandottes, and is worth dollars to any one. When writing to them mention AMERICAN POULTRY JOURNAL and address J. C. Fischel & Son, Box J, Hope, Ind.

DARLING & CO. AT NEW YORK.

As will be noticed by their advertisement in this issue, Darling & Co., of Chicago, Ill., the pioneer Poultry Food and Supply manufacturers of the West, have established a factory in New York. This will enable them to handle more advantageously the trade they have already built up in the eastern and New England states. Their trade relations are already established. The Darling products have been selling on their known high quality, and the volume of sales in the East for the last two years has just about kept pace with those in the West. After all, it is not so much a matter of location, as of having the goods to deliver. The Darling people know the value of a good reputation. They acquired theirs while located at the Union Stock Yards, Chicago, where they had every sort of poultry food material at hand. They are a high minded, honorable concern, manufacturing only the highest grade goods it is possible to produce, and we commend them heartily to the notice of our readers.

Our readers are all familiar with the advertisement of the Page Woven Wire Fence Company, Adrian, Mich., and undoubtedly know that they claim to use a better quality of wire—a basic, open-hearth spring steel wire, having double the tensile strength of common fence wire of the same size, and not only a stronger but also a springier wire—a wire that makes good springs. This wire is known as Page Wire.

The Page Fence Company have just issued a souvenir edition of their house organ, the *Page Fence Age*, which gives a detailed, illustrated description of their process for manufacturing Page Wire and tells why it is stronger and springier. Every fence buyer should get a copy. It is free. Drop them a postal card asking for "A Trip Through Our Mills."

The Ouachita Valley Poultry Farm, Camden, Ark., report the grandest lot of young stock they have ever produced and all from noted prize winners. The show record made by birds from this farm is proof that they know how to produce the good ones, and a customer can depend on getting good results from stock furnished by this farm. Mr. Brown, the proprietor, has devoted considerable attention to increasing the good qualities of the Bronze turkey and has succeeded in producing some very choice specimens. Read their ad on the back cover page and write for further particulars. Mention AMERICAN POULTRY JOURNAL.

J. E. Holyoke, of Adrian, Mich., won at the Southern Michigan District Fair at Adrian, Mich., in September, as follows: Langshans, 1st and 3rd cock; 1st, 2nd, 3rd hen; 2nd, 3rd cockerel; 3rd pullet; 1st, 2nd, 3rd pen; 1st on display and special on display.

American Reds—3rd cock; 1st, 2nd hen; 2nd pullet; 1st pen; 2nd display and special on display. Also won display on Barred Rocks.

These were all large classes and the competition close.

M. I. Daggett Company, of Des Moines, Iowa, are breeders of O. I. C. swine. They are having a very nice trade, resulting from the fact that they treat one and all the very best they can. They report that business is good and their stock nearly always sold before it is old enough to ship. The testimonial letters that they receive show that their customers are fully satisfied.

John C. Plane, of Belvidere, Ill., the S. C. White Leghorn breeder, writes that he certainly has birds this year that are as good as they make; white as snow and fine large birds with combs small and fine. He expects to have some extra fine exhibition birds that will be winners.

F. C. Tabor, of Worcester, N. Y., has a change in his ad this month. He writes that he has a grand lot of Rose Comb Brown Leghorns for sale, bred from his 1st prize cock at Madison Square Garden last January.

THIRTY DAYS' SALE OF AMERICA'S BEST Golden and White Wyandottes

I will sell several hundred birds for this month only out of my this year's fine matings at greatly reduced prices. The Keller Strain is known the world over as the best. I won 36 premiums at the World's Fair. They have won heavy at Chicago and over 300 premiums at Madison Square Garden, N. Y., since 1890. They win in all the leading shows of the country. We have the finest lot of youngsters we ever raised, for showing and breeding at moderate prices. If you want the best remember Keller is the man to go to. Also Silver Wyandottes, Sebright Bantams and Belgian Hares. Large circular tells the rest.

IRA C. KELLER, BROOK SIDE FARM

Box 75, Prospect, Ohio

Barker's Light Brahmas

A clean sweep at the recent Illinois State Fair, winning 1st cock, 1st, 2d and 3d hen, 1st and 2d cockerel, 1st and 3d pullet and 1st and 2d pen. 300 fine breeding and exhibition birds for sale, with strong color, the true Brahma shape and good leg and toe feathering.

I. N. BARKER & SON

Box A, Thorntown, Ind.

WING PIANOS

Are Sold Direct From the Factory, and in No Other Way

You Save from \$75 to \$200

When you buy a Wing Piano, you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many still do—at retail—you pay the retail dealer's store rent and other expenses. You pay his profit and the commission or salary of the agents or salesmen he employs—all these on top of that the dealer himself has to pay to the manufacturer. The retail profit on a piano is from \$75 to \$200. Isn't this worth saving?

SENT ON TRIAL Anywhere We Pay Freight No Money in Advance

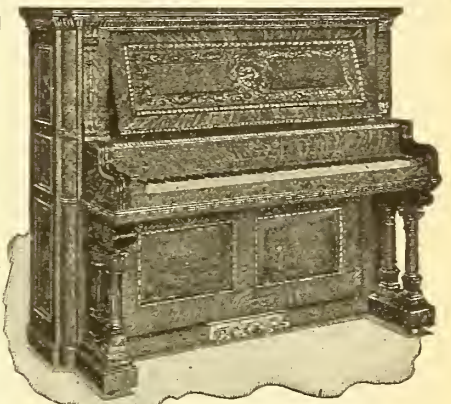

We will place a Wing Piano in any home in the United States on trial, without asking for any advance payment or deposit. We pay the freight and all other charges in advance. There is nothing to be paid either before the piano is sent or when it is received. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing, and are under no more obligation to keep the piano than if you were examining it at our factory. There can be absolutely no risk or expense to you.

Do not imagine that it is impossible for us to do as we say. Our system is so perfect that we can without any trouble deliver a piano in the smallest town in any part of the United States just as easily as we can in New York City, and with absolutely no trouble or annoyance to you, and without anything being paid in advance or on arrival either for freight or any other expense. We take old pianos and organs in exchange. A guarantee for 12 years against any defect in tone, action, workmanship or material is given with every Wing Piano.

Small, Easy Monthly Payments

In 37 years over 40,000 Wing Pianos have been manufactured and sold. They are recommended by seven governors of States, by musical colleges and schools, by prominent orchestra leaders, music teachers and musicians. Thousands of these pianos are in your own State, some of them undoubtedly in your very neighborhood. Our catalogue contains names and addresses.

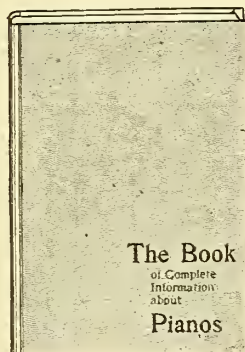

Mandolin, Guitar, Harp, Zither, Banjo—The tones of any or all of these instruments may be reproduced perfectly by an ordinary player on the piano by means of our Instrumental Attachment. This improvement is patented by us and cannot be had in any other piano. WING ORGANS are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

You Need This Book

If You Intend to Buy a Piano—No Matter What Make

A book—not a catalogue—that gives you all the information possessed by experts. It tells about the different materials used in the different parts of a piano; the way the different parts are put together, what causes pianos to get out of order and in fact is a complete encyclopedia. It makes the selection of a piano easy. If read carefully, it will make you a judge of tone, action, workmanship and finish. It tells you how to test a piano and how to tell good from bad. It is absolutely the only book of its kind ever published. It contains 156 large pages and hundreds of illustrations, all devoted to piano construction. Its name is "The Book of Complete Information About Pianos." We send it free to anyone wishing to buy a piano. All you have to do is to send us your name and address.

Send a Postal To-day while you think of it, just giving your name and address or send us the attached coupon and the valuable book of information, also full particulars about the WING PIANO, with prices, terms of payment, etc., will be sent to you promptly by mail.

WING & SON, 350-395 West 13th St. New York

1863—87th Year—1905

Classified Ads.

Under this heading ads will be inserted for five cents per word each month for less than three months, **three cents per word for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. Commencing with the January 1904 issue, all ads will be inserted under **classified headings.** No ads accepted at less than an average of 50 cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. AMERICAN POULTRY JOURNAL is furnished every advertiser during the time his ad is running. Forty thousand per month. We guarantee an average monthly circulation of 40,000 copies of AMERICAN POULTRY JOURNAL. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted.

On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.

All Copy for Classified Ads Must Reach us by the 19th of the Month.

This is it.

SHAW'S CONVENIENT LEG BAND

pleases everybody. You'd discard any other marker made and use it if you saw it. Send for free sample.

It Snaps On. It stays; it's aluminum; it has large raised figures; it's easy to read. Prices: 12 bands, 20c; 30 for 45c; 60 for 75c; 100 for \$1.00. I'll send you letters from poultrymen who know, with samples if you ask it.

H. O. SHAW, Box 103, GRINNELL, IOWA.

Wyckoff's S. C. White Leghorns

Acknowledged everywhere the world's greatest laying strain; unequalled in standard qualities. Without question the most profitable strain of poultry in America today. 1000 extra choice yearling hens mated with grand, strong, early hatched cockerels must be sold at once to make room. They are the ideal breeding matings for season of 1906, and we will make special inducements in prices to early purchasers. When writing for prices and catalogue please state plainly just what is wanted. Address

WYCKOFF'S FARM,

Aurora, Cayuga Co., N. Y.

\$300

If you are looking for a brooder that is a success from the start, that will enable you to have enough of them to properly care for your chicks, and will not cramp your purse, that is easy to clean, and one that applies the heat direct to the backs of the chicks. Send for free catalogue to the

PERFECT BROODER SHOP

CELORON, NEW YORK

System in Poultry Practice

BY JAMES SHACKLETON.

30 Chapters, 147 Pages, One Dollar, Postpaid.

May 1, 1905. Sales of this book since Sep. 1, 1904—eight months—are larger than for preceding 18 months. It is meant to appeal to common sense and evidently succeeds, for increase is chiefly in places where it has gone before. California always took more than any other state, and now takes more than any other three. Canada has many and now takes more than any state but California. Even Australia takes many. This book has been sold in every state of the Union, except two southern states, and Alaska. In Canada, Newfoundland, P. E. Island, New Brunswick, Nova Scotia, Quebec, Ontario, Manitoba, Assiniboia, Alberta, British Columbia and Vancouver Island. In Cuba, Hawaii, Philippines. In England, Belgium, Germany, Australia, New Zealand and China. It is meant to be of equal value in every climate, for whatever purpose fowls are kept, and evidently is so regarded. Sales are increasing rapidly everywhere. Enthusiastic testimonials are plentiful.

The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON,

Box A 12, Milburn, New Jersey

HOUDANS!

Rigg's HOUDANS have been line-bred since 1874. It is a thoroughly established strain, unapproached in size, style and finish. Acknowledged by all breeders to be the standard of Houdan excellence in America.

Large of size, extremely vigorous and wonderful egg producers. Have won more prizes in the show room than all other strains combined. Exhibition and breeding stock at prices representing their value. A positive guarantee given in each case.

WHITE WYANDOTTES

The demand for White Wyandottes has been so heavy that at this early date we are sold out of surplus stock. The breeding stock we have retained for the coming season are White Wyandottes as White Wyandottes should be.

THOS. F. RIGG

IOWA FALLS, IOWA

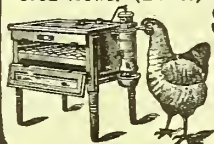

INCUBATOR DOLLARS

It's no wizard's work to get dollars, and lots of them from an incubator—but it must be the right incubator. You can get the best incubator on the market, the 200 egg size for \$12.80. The most perfect hatcher made—one that will hatch a chick from every fertile egg is the

WOODEN HEN

With it you can raise a hundred dollars' worth of broilers in a dozen weeks' time. You don't need a big farm—start small and grow with your chickens. Our catalogue will tell you how chickens and a bank account can be grown on the same plot. It has fourteen beautiful colored views. (Free.)

Hallock's White Wyandottes

won five out of six firsts at New York. Stock for sale.

ROSS C. H. HALLOCK, 6314 Clifton Ave., St. Louis, Mo

A "Ringlet" 1st Prize New York Cock and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation, Madison Square Garden, New York, January, 1903.

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

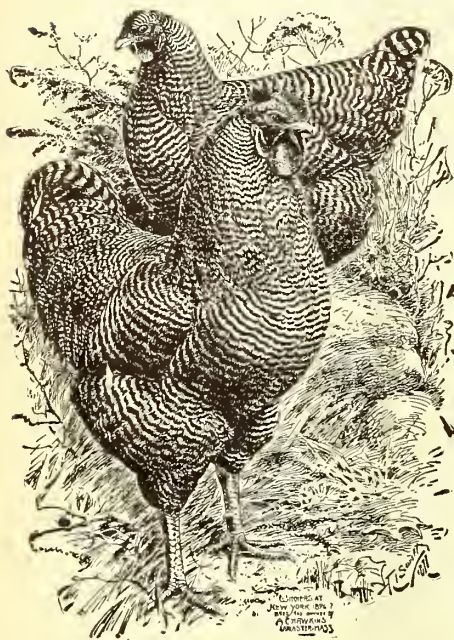

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" cleans sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 87 prizes. 36 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

WYANDOTTES, Silver White and Buff.

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others.

My matings this season are the best I ever owned.

At New York, in the largest show of Barred Rocks ever seen, 451 Birds, I won 1st, 2d, 3d and 4th Cockerels; 1st, 2d and 3d Pullets; 1st and 3d Cocks; 1st and 2d Hens; 1st and 2d Breeding Pens. My other varieties are of the same high quality. Hundreds of choice exhibition and breeding birds at honest prices. EGGS from Prize Matings: One setting, \$5.00; two settings, \$8.00; three settings, \$10.00; five settings, \$15.00. \$20.00 per 100. Catalog of America's finest Plymouth Rocks and Wyandottes free.

A. C. HAWKINS, Lock Box 25 Lancaster, Mass.

First Cockerel at New York.

Buff Wyandotte Facts

Chicago, 1902—1st cockerel, 5th pullet, 4th pen, two specials.

Nunda, 1902—1st cock, 2d cockerel, 2d, 3d hen, 2d, 3d, pullet, 2d, 3d pen, \$35 gold sweepstakes.

Chicago, 1903—2d pullet, 4th hen, 4th cock, 4th cockerel, 3d pen, five specials.

Indianapolis, 1903—1st cock, 1st cockerel, 1st, 2d pullet, 1st, 2d hen, 1st pen, 3 specials.

Chicago, Dec., 1903—1st cock, 1st, 3d, 4th hens, 1st pen, \$25 cup display.

St. Louis World's Fair—On 8 entries we beat the "World's Best," winning 1st, 2d cock, 3d hen, 6th chl., 6th pen. A remarkable victory.

Chicago, Dec., 1904—Five 1sts, four 2ds, three 3ds, three 4ths, one 5th, \$25 cup display.

Chicago, Jan., 1905—1st, 5th cock, 1st hen, 1st pullet, 3d 4th cockerel 1st pen, American Buff Wyandotte Club cup display, and special best colored female. We were selected from the thousands breeding Buff Wyandottes as having the best, to make the only exhibit at World's Fair, St. Louis, and our stock was shown there during the entire exposition.

WE HAVE PROVED OUR STRAIN BEST. We are not going to exhibit this season, but give our entire time and attention to preparing our stock for sale. We shall condition a large number of show birds, and can supply specimens fit to win anywhere. Breeding hens mated to produce high-class stock our specialty. We solicit your inquiry and are always pleased to quote prices.

We Can Teach You How to

RAISE POULTRY PROFITABLY

If your poultry isn't paying as it should, you are making costly mistakes. Our course of instruction will quickly teach you how to make any yard (large or small) pay from 25 per cent to 50 per cent profit. Your knowledge and ours combined will make you successful. The individual home lessons, delivered regularly at your very door, are prepared by practical poultrymen who have by actual experience mastered the problems which worry nine-tenths of all poultry raisers. You get no theoretic instruction. After a little study you can discover your errors and overcome them. The directions are easy to understand and follow, and big paying results are sure. If you want to qualify yourself as manager of a poultry yard and accept one of the

MANY LUCRATIVE POSITIONS

we have on our records, our Course of instruction will soon make it possible. Poultry Culture is not drudgery when rightly conducted. It is a healthful, profitable, enjoyable vocation for man or woman. Write for interesting free literature at once. Ask for circular showing some of the good paying positions we have open for competent men.

15 DAYS' FREE TRIAL

Best Bone

Cutter Built

When you buy a **Bone Cutter** you want to know that it will **do its work right** and **do it quickly**. Cut Green Bone is an acknowledged necessity to the successful raising of poultry for profit. Every poultry raiser therefore needs a **Dandy Bone Cutter** to prepare it **fresh every day**. The "**DANDY**" produces cut bone in just the right shape for best results—turns it out like coarse corn meal—**handy to feed**. No other cutter works so easily, so rapidly and so well. A boy can operate a "**DANDY**." Our **15 days' free trial** allows you time to test the machine thoroughly before you buy it. If it **suits you, keep it** and pay the small price we are able to name you on account of our manufacturing Bone Cutters exclusively. If it does not suit, **send it right back** and you will not be out a cent for the trial. The "**DANDY**" feeds the bone to the cutters automatically and cannot possibly clog the cutters. Write for **free** catalogue beautifully illustrated, showing the several sizes we make to meet the needs of poultry raisers large or small. It also contains valuable suggestions on **Poultry Feeding** that you ought to have. Send for catalog today and ask all about the **free 15 days' trial**.

EVERY FARMER NEEDS A GOOD TELEPHONE

**IT'S CHEAPER TO
TALK THAN WALK**

A telephone on the farm is a "saver" in a great many ways. It increases the working force by decreasing the necessity for so many trips to town and to the neighbors. It adds security by providing means for quick communication in time of misfortune and distress. There is no question as to the telephone being a paying investment for the farmer. The only question is, which telephone is the best for the farmer to buy?

Stromberg-Carlson Telephones

are built better than the ordinary telephone, so that they are especially adapted to the farmer's use. Every piece and part that go to make up a complete telephone are made by skilled specialists in our own plant—the largest independent telephone factory in the world—made with minute care and thoroughly tested before leaving our hands; that's why they give best service, that's why there are more of them in use than of all others combined, that's why it is the telephone to buy. Many other good reasons are contained in our new book, "How the Telephone Helps the Farmer," which will interest you if you are going to buy one or a hundred telephones. Write today—ask for book 81-L—we send it free.

MILLER'S POULTRY LINE Makes Success Sure.

Don't get started wrong, don't continue to just "get along," equip yourself with the Machines, Foods and Appliances that **INSURE THE BEST SUCCESS.**

The Ideal Incubator

is the machine that gives Profitable Hatches to the experienced or inexperienced alike. It is built by the **man who knows**, and he has put his 20 years of practical poultry raising experience into it. It is getting results for thousands of satisfied users in this and other countries. It is simple, safe, durable and economical. Its regulator is a marvel. Read about it in our new catalogue.

The Ideal Brooder

raises chicks because it is built right. Its heating, regulating and ventilating systems are founded on natural, common sense laws. Chicks always warm, never crowded, and always have fresh air. Ideal Incubators and Brooders are backed by a guarantee to give satisfactory results or your money will be refunded. This iron bound guarantee is backed by all the J. W. Miller Co. is worth.

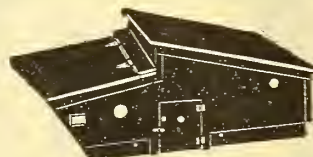

Poultry Foods for Special Purposes.

All our poultry foods are compounded from the choicest materials money can buy. There is great opportunity for filling, "by-products" and other adulterations in poultry rations. Be safe—come to headquarters and you'll save money and get the results you are aiming at.

Our line includes Chick Feed, Scratching Food, Laying Food, Forcing Food, Beef Meal, Beef Scraps, Poultry Bone, Crushed shells and Alfalfa Meal.

CAST AND STEEL POULTRY TROUGHS

In raising poultry successfully much depends upon the cleanly and sanitary conditions of the feeding and drinking receptacles. More diseases arise from using unsanitary feeding troughs and impure water than from any other causes. In

BUCH'S Cast and Steel TROUGHS

the poultryman finds just what he needs—a trough that will last indefinitely and afford absolute sanitary conditions. Easy to keep clean and so constructed that ice cannot freeze fast in it. Most satisfactory and economical poultry trough made. Suppose you send for our catalogue No. 2; it's free; gives prices and will surely interest you, and may save you a lot of money.

A. Buch's Sons Co., Box 100, Elizabethtown, Pa.

WHITE WYANDOTTES

Correctly bred—ideal shape and color that is absolutely white to the skin, and good yellow legs. They are first-class layers, and stock of my breeding has scored 96, having won at Chicago, Minneapolis, Naperville, Rockford, Princeton, Downers Grove and elsewhere since 1896. I have bred them for thirteen years. They will do your eyes good to look at. I have the stock that will please you and I want you to describe plainly what you want and I know the price will be satisfactory, you will get full value. Several cockerels but only a few females. **Special Egg Orders** booked for Spring delivery, \$3 per sitting, later they will be \$5; a chance never offered before, with a positive guarantee.

Bradley Barred Rocks Closing them out; if in need of a fine cockerel you will surely miss it if you don't order one of these handsome fellows. They scored over 93 last year and are correctly bred. Describe your wants; will appreciate your inquiries.

A Fishel World's Fair Winner

by any White Plymouth Rock breeder. If you want the most beautiful and profitable of all fowls, try the Fishel White Plymouth Rocks. Send three 2-cent stamps for 48-PAGE CATALOGUE, the most elaborate Poultry Catalogue ever issued. If in need of EXHIBITION BIRDS that will win, SELECTED BREEDERS that will breed you winners, or UTILITY FLOCKS that will make you money, write me, please. I have something like eight thousand birds to select from. May I hear from you?

BETTER THIS SEASON THAN EVER

I am pleased to say the results from my matings this season are better than ever. It is gratifying to know that when you offer your customers fowls you are offering them birds they can get results from. Not only are the Fishel birds winning in the hands of my customers the world over, but

Fishel's W. P. Rocks

at ILLINOIS STATE FAIR, Sept. 30 to Oct. 7, 1905, made a record unequalled in history of poultry breeding; viz., winning first, second and third prize cock; first, second and third prize hen; first, second and third prize cockerel; first, second and third prize pullet; first, second and third prize breeding pen. Also the most coveted of all, SPECIAL PRIZE for BEST HEN in AMERICAN CLASS, winning over birds that had won at many other fall shows. 134 White Rocks in this show. How was that for a CLEAN SWEEP? If you had any doubt as to the Fishel White Rocks being

The Best in the World

that doubt is surely removed now after this winning. Our previous winnings of seventeen PRIZES at ST. LOUIS WORLDS FAIR and also the leading prizes at all the leading shows the world over you may say, were never equaled because it really does follow Nature's way in principal and action. It has no more draft slides "ventilator vents" and other "do-funnies" than a hen has. It requires no more "supplied moisture" than a hen does. **Because** by its unique construction it gives the eggs in the egg chamber fresh air—not through a little round hole, but in **exactly the same way** that a hen's nest is ventilated. No poisonous gases are kept closely confined in the chamber to kill the chicks. That's why the Natural Incubator not only hatches more chicks than any other, but hatches **stronger** chicks—the kind that live and grow.

U. R. Fishel, .: Box A, Hope, Ind.

Do Your Chicks Come Strong Enough to Live?

That's an all important question. If you have had experience with incubators, you know of the fearful losses from weak constitutions. Many die at different stages of incubation, many just as the shell is being pipped, many more in the first 24 hours and on up to two weeks. Wouldn't you like to operate **the one** incubator that offers a remedy for all this? That is what you are offered in

The Natural Incubator

The one incubator that is different. It is **different** in principal, **different** in materials, **different** in construction, **different** in operation, but most of all, **different in results**. It is called the "Natural" because it really does follow Nature's way in principal and action. It has no more draft slides "ventilator vents" and other "do-funnies" than a hen has. It requires no more "supplied moisture" than a hen does. **Because** by its unique construction it gives the eggs in the egg chamber fresh air—not through a little round hole, but in **exactly the same way** that a hen's nest is ventilated. No poisonous gases are kept closely confined in the chamber to kill the chicks. That's why the Natural Incubator not only hatches more chicks than any other, but hatches **stronger** chicks—the kind that live and grow.

And That's Not All

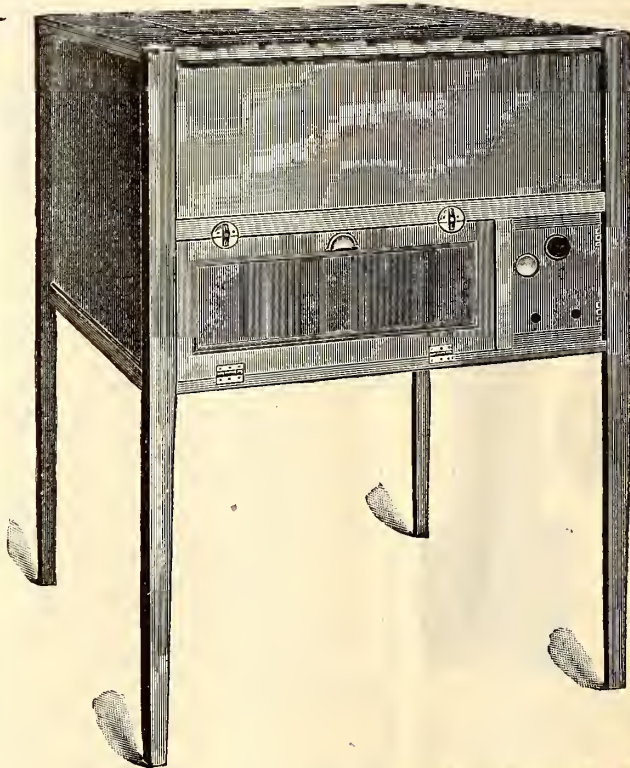

The Natural Incubator is **stronger, more durable, but lighter** and more easily handled than any other incubator, because its walls are made of hard glazed compressed **Paper board**—one of the best non-conductors of heat in the world. This material (such as is used for making car wheels, etc.) does not warp, crack or split under the influence of heat, as wooden incubators are sure to do. It retains the heat better than wood; it is more easily handled than wood; it lasts longer than wood. So well does it retain the heat that a change of 40 degrees in outside temperature does not affect the inside temperature.

The Natural Incubator has a perfect compound heater that diffuses the heat to all parts of the chamber with absolute uniformity, and the most sensitive regulator made. It requires no watching. You owe it to yourself to investigate this machine. The catalog will explain in detail the why of superiority to all others.

Our Natural Storm King Brooders are the best type in use. Plan and fixtures radically different from all others. Brooders complete; or to save shipping expenses, we will send fixtures and blue print of plans so they may be used in any style of brooder.

We pay all freights as far west as the Mississippi river. Purchasers beyond that pay from the river on. Write for free catalog giving all particulars.

ABOUT THE SOUTH

"About the South" is the name of a 64-page illustrated pamphlet issued by the Passenger Department of the

Illinois Central R. R. Co.

in which important questions are tersely answered in brief articles about Southern Farm Lands, Mississippi Valley Cotton Lands, Truck Farming, Fruit Growing, Stock Raising, Dairying, Grasses and Forage, Soils, Market Facilities and Southern Immigration along the lines of the Illinois Central and Yazoo & Mississippi Valley railroads, in the States of Kentucky, Tennessee, Mississippi and Louisiana.

Send for a free copy to J. F. Merry, A. G. P. A., I. C. R. R., Dubuque, Iowa.

Choice Pickings in the YAZOO VALLEY

"Choice Pickings in the Yazoo Valley" is the title of an illustrated 36-page pamphlet describing the railroad lands in the famous Yazoo Valley of the Mississippi, on the line of the Yazoo & Mississippi Valley Railroad, and showing what has been accomplished by the large number of settlers successfully established there. For a free copy, address E. P. Skene, Land Commissioner, I. C. R. R. Central Station, Park Row, Chicago, Ill.

Information concerning rates and train service to the south via the Illinois Central can be had of agents of connecting lines, or by addressing

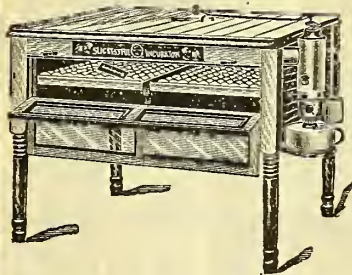

A. H. HANSON, G. P. A., Chicago, Ill.

If You're In Earnest

about poultry raising, outfit with approved incubators and brooders. All the failures come from people who go at the poultry business in a half-hearted way and try to "get along" with most anything. You'll not fail if you use

SUCCESSFUL

Incubators and Brooders

No one ever failed who really gave them a fair trial. They are record hatchers and brooders, not experiments or makeshifts. For many years they have been hatching more, stronger and better chicks

and raising more of them to maturity than any other machines made. They consume least oil, take least attention, are

MOST RELIABLY SELF-OPERATING

and produce uniformly best results under all conditions. We have the proof for every one of these statements. Write us for it. Incubator and Poultry Catalogue FREE. Booklet, "Proper Care and Feeding Small Chicks, Ducks and Turkeys," 10c. 50c poultry paper one year, 10c.

DES MOINES INCUBATOR CO.

Department 1,

DES MOINES, IOWA.

We have a full line of all poultry supplies, standard bred poultry and fine eggs, listed at lowest prices in our free catalogue. Send for it.

Wealth in the Inland Empire

Business opportunities in new and growing towns. Wonderful agricultural wealth in the great irrigated districts. F. Walden of Zillah Wash., cleared \$10,000 net in one year from 80 acres. Others are making like profits. Schools, churches, rural delivery, rural telephone lines—a good land to live in and a climate second to none. Adjacent to Spokane and the great Puget Sound cities—ample markets for all time.

Ask A. M. Cleland, General Passenger Agent, St. Paul, Minn., or C. W. Mott, General Emigration Agent, St. Paul, for information about the great irrigated district of Eastern Washington.

ADDRESS:

S. D. LAPHAM, Dearborn, Mich.

LOCK BOX 89.

MENTION THIS JOURNAL.

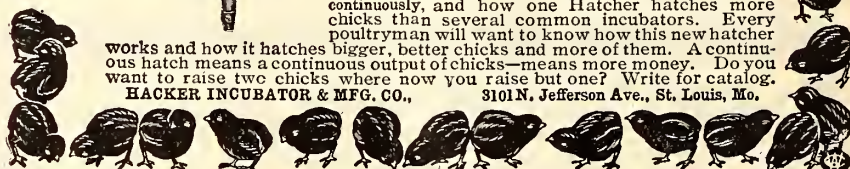

"CONTINUOUS" HATCHER

The "Continuous Hatcher" is a new departure in artificial incubation. It comes closer to the "ideal" mother-hen method than any other mechanical process. Our new catalog tells how it accomplishes these wonderful results, how it hatches continuously, and how one Hatcher hatches more chicks than several common incubators. Every poultryman will want to know how this new hatcher works and how it hatches bigger, better chicks and more of them. A continuous hatch means a continuous output of chicks—means more money. Do you want to raise two chicks where now you raise but one? Write for catalog.

HACKER INCUBATOR & MFG. CO.,

3101 N. Jefferson Ave., St. Louis, Mo.

A Basket of Clover

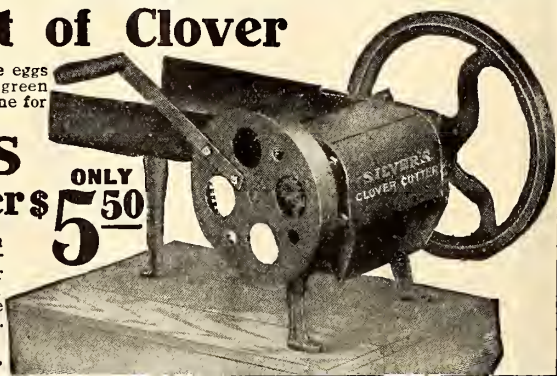

Cut in proper lengths makes the eggs come. You always have the green stuff. No better cutting machine for poultrymen at any price than

GONE HOME TO ROOST THE "ROOTS" WHITE PLYMOUTH ROCKS

MAY R. POULTRY PLANT

Connersville, Ind., Oct. 8th, 1905.

This is to Certify that I have this day sold to Mr. U. R. Fishel, Hope, Ind., my entire stock of W. P. Rocks, including my Pan-American, Cleveland, Chicago, Cincinnati, Indianapolis and St. Louis World's Fair winners. In justice to Mr. Fishel I must say the foundation stock of the Roots White Plymouth Rocks were purchased of Mr. Fishel. My Pan-American, Chicago, Cleveland, Cincinnati, Indianapolis and World's fair winners were either birds purchased direct of Mr. Fishel or bred from birds purchased of him, so practically speaking, this large lot of White Plymouth Rocks are "Going Home to Roost." This addition of four thousand birds to Mr. Fishel's already "Best in the World," gives him, without a doubt, the largest and best flock of White Plymouth Rocks in the world. I can cheerfully recommend Mr. Fishel to all my customers and to all who are in need of White Plymouth Rocks. I am sure I have spent more money with U. R. Fishel than any other one man, and know "he more than pleases his customers." I beg to remain, Yours very respectfully,

MAY R. POULTRY PLANT, D. T. ROOTS, Prop.

Mr. Roots was, as you all know, one of the most successful White Rock exhibitors, winning wherever he exhibited. The above certificate of sale explains why his success and winnings, viz:—**Fishel's W. P. Rocks.** A word to the wise is sufficient. See my ad elsewhere in this issue, or send for my 48-page catalog, enclosing three 2-cent stamps for same. Ten thousand birds to select from. Exhibition birds, selected breeders and utility flocks.

U. R. FISHEL, Box A, Hope, Ind.

Winning

BARRED PLYMOUTH ROCKS BROWN LEGHORNS

this year
than ever

Why?

We are putting more quality into our matings each year, and the result is greater exhibition merit. The following are interesting facts: 7 out of 10 firsts at the St. Louis Exposition; 3 firsts on Barred P. Rock ckls. during the last 4 years; Grove Hill exhibited 3 times, (1902-3-5). As many firsts at the Pan-American exhibition as all our competitors combined; six times as many firsts as any competitor at Boston shows for 6 years. These winnings on birds almost exclusively of our own breeding. If you want winners, or birds to breed winners, write

ORIGIN AND HISTORY OF THE BREEDS

The Common Fowls of Italy the Basis of the Structure Upon Which the Beautiful and Useful White and Brown Leghorns Were Built—Brought to This Country About 1835 by Vesselmen Trading in Mediterranean Ports, Who Used the Stock for Table Purposes With No Thought of Dealing in Breeding Stock—The Original Fowls Were of All Colors Other Than Black—Buff, Pile and Duckwing Leghorns English Creations—The Making of the Rose Comb Leghorns in America.

Paper No. 5.—The Leghorn Family.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal

The Leghorn fowl, the most popular and the most extensively bred of all the non-sitting breeds of domestic poultry, is Italian in its origin. While this is true, strictly speaking, the Leghorn is and has been for more than half a century distinctively American. The modern Leghorn, white and brown, both single and rose comb, is the product of the American fancier. It was from America, not Italy, that the Leghorn was first sent to the breeders of England and other countries. In fact no one sends to Italy for Leghorns, for the good and sufficient reason that the common fowl of Italy, from which the modern Leghorn was evolved, is in no way, other than in shape, anything like the Leghorn recognized by the world's fanciers.

The American Leghorn has found its way into every civilized country on the globe. As egg producers these fowls stand, by test, the best of all, when properly housed and otherwise cared for. The large and profitable egg farms of this country and England are stocked with Leghorns. Upon the farms of America these fowls are paying handsome dividends, where market eggs are sought.

There are several varieties of the Leghorn, as follows: Single Comb White, Rose Comb White, Single Comb Brown, Rose Comb Brown, Single Comb Buff, Rose Comb Buff, Single Comb Black, Pile, Duckwing and Dominique.

The Single Comb White and Brown varieties are bred in greater numbers than all others combined.

EARLY HISTORY.

The original Leghorns were undoubtedly brought to this country by vesselmen trading in Mediterranean ports, but whether the first consignment was directly from Leghorn is a question which will never be positively settled. It has been said that the first lot of these fowls received in America were brought in in 1834. It is not at all strange that these fowls made their way to this country in that early day. Vesselmen leaving Italian ports would, most naturally, take on board a number of fowls to be used for table purposes on the trip about to be made. These vesselmen had, at first, no idea of dealing in breeding fowls. But American fanciers, then as now, on the alert for something new and novel, were eager for these foreign fowls, and soon these vesselmen were doing a large, and it is safe to say, a very profitable business in supplying the wants of the Americans.

The first reference we have in American literature to the Leghorn is found in *Saunders's Domestic Poultry*, published in 1866. This reference is as follows:

Within a few years past fowls known as Leghorns have attained considerable notoriety. So far as I am aware they are entirely unknown among the fanciers of Great Britain, and for my own part I have been led to avoid breeding them, from the impression, be it well or ill-founded, that the characteristics were not sufficiently well established to enable to breed them true to feather and points, and to entitle them to the distinction of a breed. However, since the publication of the first

edition of this little book I am convinced that fowls which have gained so fast in public favor must have something to recommend them, and may at least be commended as worthy the attention of breeders. Their uniform characteristics as I at present view them are these:

"Medium size, persistent as layers, being poor sitters or non-sitters, having fair fattening qualities and very good flesh. They are besides hardy, suffering from severe weather much less than the Spanish. With this breed they are evidently closely allied, all having single combs, large white ear-lobes, and in many cases partly white faces, and in the best specimens something of the style of that justly favorite breed. These birds are all colors except black, the light colors prevailing, and they have none of the marks of a pure breed."

Here we have a good description of the common fowls of Italy, brought here by vesselmen, not as breeding stock, but as market stock.

Mr. Saunder's statement, "Within a few years past fowls known as Leghorns have obtained considerable notoriety," is conclusive evidence that fanciers here had been handling these fowls for several years prior to 1866. His further statement, "I am convinced that fowls which have gained so fast in public favor must have something to recommend them," shows clearly that it was not many years prior to 1866 that the first consignment of these fowls was received by American fanciers.

Mr. H. H. Stoddard many years ago made the following statement regarding the origin of the Single Comb Brown Leghorn:

"About 1835 (the exact date is not known) N. P. Ward of New York City received direct from Italy a few Brown Leghorn fowls, which, in his hands, undoubtedly proved their claims to superior merit, for, though he wrote nothing about them which has been preserved, he gave eggs and fowls to his friends, one of whom was J. C. Thompson, of Staten Island. Mr. Thompson was greatly interested in the breed, and gave an account of their marvelous precocity and early fecundity. The pullets matured and commenced to lay at the age of four months, and, though we have no statistics of the male side of the house, there is little doubt that the cockerels showed as early development as the pullets."

"At a subsequent period Mr. Thompson, who seems to have been a most enthusiastic fancier, sent by his son-in-law, who was a sea captain, for an additional supply of the fowls, and received birds that had the same markings as those first imported. In a letter published after breeding them several years, and when the fresh blood of various importations forbade the idea of deterioration through too close inbreeding, this pioneer breeder expresses the opinion that pullets frequently laid themselves to death."

"For some time after this, however, there was little known of the fowls, and when, in 1852, they made their entry into Mystic River, Conn., no one breeder in a hundred knew what they were, or what were their peculiar merits. They speedily learned the latter, however. The second year another lot of birds arrived at Mystic and were distributed among the friends of Captain Gates and the first officer of the vessel, Mr. Morgan, who still lives in the town of Groton, and corroborates the details of the importation. From this time the dissemination of the breed was very rapid, and its popularity advanced rapidly through all New England, where it was known as the red Leghorn."

In view of this statement by Mr. Stoddard it is evident that we here have some very important facts, and taken into consideration with the evidence given by Mr. Saunders the deduction is: White and Brown Leghorns (fowls resembling the modern Leghorn in form and comb only, bear in mind) were first brought to this country about 1835; that for a time they were eagerly sought by American fanciers; that as we would now express the situation, "the boom dropped," and for a time there was little doing with these fowls; that it was not

until about 1853 that great interest was renewed and these fowls demanded by fanciers of this country.

England received her Leghorns from America. Tegetmeier, the English author, in his *Poultry Book*, 1873, referring to the White Leghorn, said:

"To our American cousins is due the credit of having introduced certain admirable breeds of poultry. The Brahmas are undoubtedly second to none as useful fowls. Another race, which is as equally popular in the United States as being at once most useful and ornamental, is that known as the White Leghorn. These fowls are hardly, if at all, known in this country; but, having tested their merits for two seasons, I can report most favorably on them, and fully endorse all that has been said in their favor on the other side of the Atlantic."

"White Leghorn are birds of the Spanish type, but with white in the place of black plumage. I find them to be abundant layers of full-sized eggs, laying the whole year around except through moult. I regard these fowls as exceeding useful and ornamental. They have materially lessened the value of the Spanish fowls. *The Brown Leghorn has not as yet been brought into England.*"

As Mr. Saunders said, the common fowls of Italy brought to these shores by the vesselmen were birds white and brown, "in fact all colors but black." *Poultry World* in 1876 in an article regarding the origin of the Black Leghorn, said:

"The modern acquisition of white ear-lobes, long legs and not more than five points in the comb, the dark brown color and greater weight, has been the result of the following crosses known to the writer: Spanish sires bred upon black-red game hens, and the progeny to Brown Leghorn cocks, and this progeny inbred to sire. Again, black-red game sire upon Spanish dams, and the progeny bred to Brown Leghorn cock, and inbred as before Black Spanish hens bred to Brown Leghorn cock, and the progeny inbred."

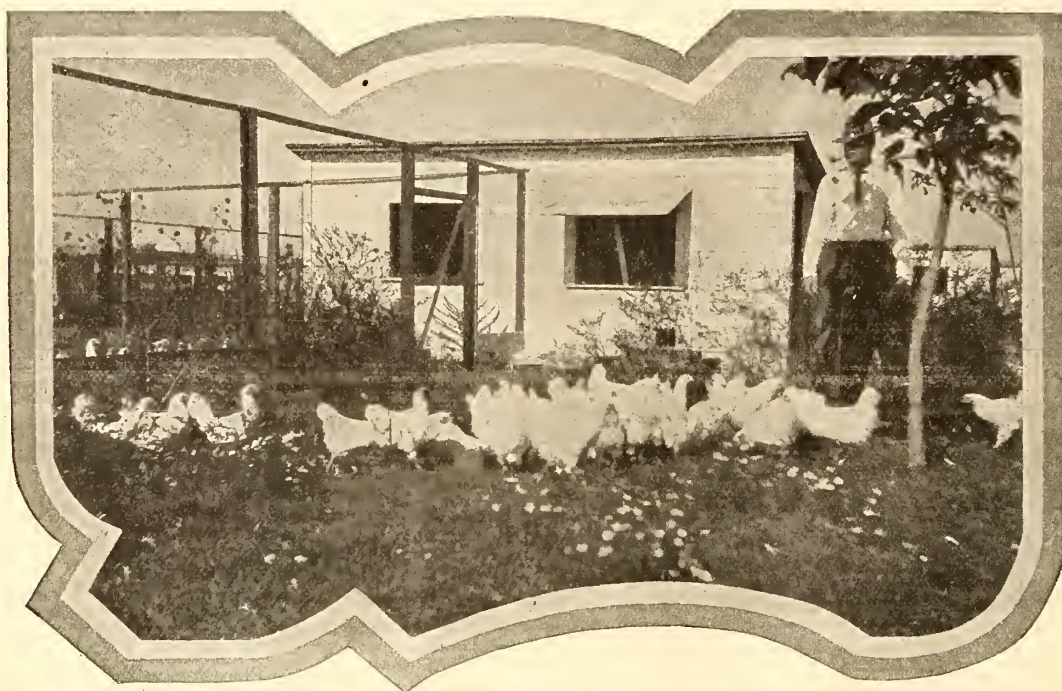

So far as known no crosses were employed in the production of the modern White Leghorn, single comb. An attempt was made by a number of fanciers about 1875 to secure a larger White Leghorn by introducing the blood of the White Game, but this stock was soon abandoned, and no trace of it remains. Some have introduced White Minorca blood in an effort to get a larger Leghorn, but this to but little extent.

ROSE COMB LEGHORNS.

Thorne, in *Complete Poultry Book*, 1886, says:

"Certain American breeders are attempting to substitute the rose comb for the ordinary comb of the Leghorn fowl, claiming this type of comb to be preferable on account of superior beauty and non-liability to freeze."

It is a matter of record that the Rose Comb White Leghorn was produced by crossing a Single Comb White Leghorn on

A group of White Wyandottes at feeding time on the Emma B. Poultry Farm, Gurnee, Ill.

"The first importation of this breed from Italy, regularly bred from, of which we have any authentic account, was made in 1871 by Mr. Reed Watson, although stray specimens of black or very dark fowls were no doubt brought over at various earlier times. The first published account of Black Leghorns appeared in this magazine as an editorial in 1872. Since then they have become widely known. We quote: 'Mr. Reed Watson, of East Windsor Hill, Conn., has some Black Leghorn fowls direct from the vessel in which they were imported from Italy. Mr. Watson's birds show the unmistakable Leghorn form, even to the details of comb and wattles, and are as thoroughly non-sitters as any of our acclimated strains of other Leghorns. The original fowls, three in number, imported a year ago, are now surrounded by a well-grown and numerous family. The old hens have proven themselves remarkably prolific layers, and the pullets of last April are following the example. A brood of a dozen chicks can be seen hatched September 1, from eggs laid by pullets of this stock, hatched after the middle of April last.'"

Black Leghorns were admitted to the Standard by the American Poultry Association in 1874.

This is the early history of the Leghorn fowl. What a change has been wrought by the skilful, untiring and patient American fancier! To-day, beautiful of form and color, they grace the yards of fanciers in every land and clime.

Regarding the production of the modern Brown Leghorn Mr. f. K. Felch says:

White Hamburg. They have had a steady growth, and during the past five years have been in great demand.

Various breeders, in the east and middle west, sought to produce a rose comb Brown Leghorn, and several blood lines were resorted to, breeding back to the Single Comb Brown Leghorn in each case.

In 1888 the writer secured from one of the most prominent pit game breeders and cockers in the United States a pit game hen with the color of the Brown Leghorn. This hen had a rose comb. We bred her and secured some very fine Rose Comb Brown Leghorn chicks, using a male Single Comb Brown Leghorn as sire.

Hamburg blood was also used in the production of the Rose Comb Brown Leghorn.

At present an effort is being made to produce a Rose Comb Buff Leghorn. As yet good specimens are very rare.

SINGLE COMB BUFF LEGHORNS.

The honor of giving this beautiful Leghorn to the fancy belongs to Mr. and Mrs. Lister Kay, of England. A yellow male bird, with Leghorn form, was shown in Copenhagen in 1885. Mr. Alexander Comyns, then editor of the *Feathered World*, London, was a visitor at the show and greatly admired this yellow bird. Through his effort interest was aroused in England, and the Buff Leghorn idea took root. In 1888 a Buff pullet was shown in London. Then Mr. and Mrs. Kay went to work to produce a good Buff Leghorn. They secured crude specimens, yellow birds, from Denmark and elsewhere, and after

years of hard work gave to the world the beautiful and useful Buff Leghorn. In August, 1892, Mr. August D. Arnold, of Dillsburg, Pa., bought of the Kays the first prize Crystal Palace cockerel "Jasper," and the first prize pullet "Jessica," paying \$325 for the pair. These were the first Buff Leghorns brought to America.

OTHER LEGHORNS.

Duckwing and Pile Leghorns are products of English fanciers. Mr. E. G. Wycoff, of New York, has taken these and the Black Leghorn up and will, undoubtedly, popularize them in the United States. They are beautiful fowls.

The Duckwing Leghorns, Silver and Golden, are crosses of the Leghorn (white), and the Duckwing Games, also of White and Brown Leghorn cross.

The Pile Leghorn is a cross of the White and Brown Leghorn, and was introduced by Mr. G. Payne, of England, who introduced the Duckwings.

Color of the Duckwing Leghorns is practically that of the Duckwing Games.

The Dominique Leghorn was admitted to the American Standard in 1874, and a few years later thrown out. It is not bred here, but few specimens being found. It is bred to some extent in England as Cuckoo Leghorns. In plumage color it resembles the Barred Rocks.

LEGHORN FORM CHARACTERISTICS.

Leghorn form and carriage is distinctive. The Leghorn is comparatively small of size, a fowl of great alertness and graceful curves. Short backs, short shanks and low set bodies do not become a Leghorn. In form and carriage all the Leghorns have same requirements. There is no Standard weight clause for fowls of this breed. A few years ago fanciers in their desire to secure color markings lost sight of size, and as a result the winning Leghorns were not much larger than Ban-

tams. To restore size the American Poultry Association demanded, and made it a Standard requirement, that judges in passing upon Leghorns in the show room give consideration to size. Now in the scale of points for all Leghorns "size" counts for 8 points.

COLOR REQUIREMENTS.

The White Leghorn, Single and Rose Comb, male and female, pure white throughout, including quills. As in all varieties of the breed the beak, yellow; eyes, red; face, bright red; earlobes, white; wattles, red; shanks and toes, yellow.

Color of Brown Leghorn, male: Head, reddish-bay; neck, rich red, with distinct stripe extending down middle of each feather and tapering to point near the extremity of feather, the red to be free from black; back and saddle, rich red, striped with black; breast, black; body and fluff, black; wings, bows, bright red; wing fronts, black; edge of lower web a rich brown wide enough to secure a wing-bay of same color, covets, greenish-black, forming a bar of this color across wing when folded; tail, black; sickles, greenish-black; under-color, black or dark slate.

The female Brown Leghorn is a beautiful brown, the body feathers finely stippled with a darker shade, the lighter shade predominating.

Buff Leghorn color: Surface throughout an even shade of rich, golden buff, free from shafting or mealy appearance. Under-color a lighter shade, free from foreign color.

Black Leghorn color: Rich, glossy black, with greenish sheen throughout.

The Leghorn occupies a prominent place as a fancier's fowl. Its place in the show room, on exclusively egg farms, on the farms of the country and in the yards of the cottagers is assured. It is a hardy and vigorous fowl, both beautiful and useful, and will, therefore, always be demanded by the people.

LESSON ON LINE-BREEDING

**A Subject that is Commanding the Time and Attention of a Great Many of the Present-day Fanciers.
A Detailed and Comprehensive Article on the Subject, with Extended Breeding Chart.**

The art of establishing a line of breeding which will reproduce its kind, the only sure way of reproducing any kind of stock is to establish a line of breeding whose ancestry is known for several generations. In poultry breeding to establish a line the male bird should be large and vigorous; the comb and ear lobes medium large for the breed, denoting vitality. Head should be broad, eyes bright, neck of medium length, back broad, breast meaty, body of good length for the breed, deep and well rounded legs to be moist to the touch, stout and well set apart. Tail wide, carried medium high for the breed, to come of a line of sires known for vigor, shape and color. The color to be as dark as the standard of the breed allows. At the close of the breeding season the males to be bred from another year should be placed in bachelorhood until another season comes around, so as not to impair his usefulness as a breeder.

The female line to come of large stock from one-half to one pound over standard weight, vigorous, active from a well-known laying strain; other qualities to be as described for the male. The male controls in the greater degree the breed, type or shape and color; the female controls in the greater degree the weight and size of our flock. Never choose a bird to breed from with a long narrow head, small comb, for the breed denotes lack of vigor. The males which are sure breeders up to and including their fourth year are large combed. The large comb hens are generally the heaviest layers in the flock. Never use a male bird lacking wattles; they are never good breeders. A bird, male or female, with dull and listless eyes should never find a place in any breeding pen. Birds with good meaty breasts, broad backs, bodies deep and well rounded are the birds which, when properly dressed, take the premiums in the dressed fowl exhibits and bring the best market prices. It is folly to start line breeding with birds less than standard weight or less color than called for in the standard of the breed. Good weight, size and prime color denote health and vigor of the specimen.

Avoid starting a line of breeding from a bird which has been sick and apparently cured of ulcers of any kind on any part of the body, foul breath, foul vent, weak legs, knocked-kneed or wobbling gait. A bird with any serious defect should never be bred in line; defects are liable to perpetuate themselves for many generations; the same holds good with cured birds. The birds we have selected to start our lines with a cock kept celibate till 20 or 22 months old and a pullet not less than nine months old, both to have every indication of maturity. The cock's crowing should be loud and clear. His call to his consort should be readily answered by the pullet selected as his consort. The pullet's voice to be sharp and clear; eggs

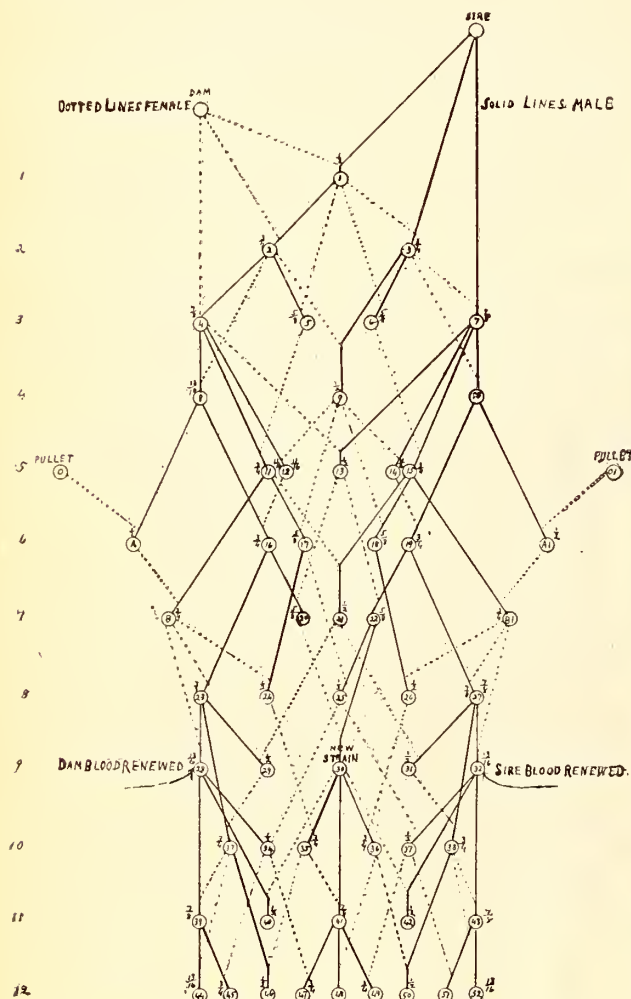

to be of good shape and color for the breed, shells firm. The pullet should be early on the range and late getting on the roost.

Having mated our birds the product will be group 1 of our chart. Many of the birds will not resemble either parent, owing to the crossing of two strong blood lines and the breaking upon ancestral influence. By mating a cockerel of group 1 bred back to his dam and a pullet bred back to her sire, then do we find the strongest line of our breeding. Often when we breed back to the sire and dam, producing matings 2 and 3 of our chart, do we find birds to strongly resemble both sire and dam; to return to group 1, while the young stock is growing to watch for the birds which make the best and most regular growth. The young cockerels should be carefully watched when coming into their second feathering, the coloring of which will denote his pullet-breeding quality. Cull out all chicks that do not have a stout, well-curved back and stout, well-shaped legs. Chicks with good beaks and legs as above generally grow up to have well-shaped bodies fit to take their place in the breeding pen, remembering as we mate from year to year that any deficit should be compensated in the mate in the first years of our breeding. Care must be taken on the dam side of our line; hens lose color at a more rapid rate than the males.

To return to our chart, in the third year take a cockerel from group 2, three-quarter dam blood, breeding it back to the original dam, the produce of the mating will be group 4, seven-eighths the blood of the original dam; the best cockerel of this mating to be used to carry on the blood of our original dam. A cockerel from group 2, three-quarter dam blood, mated back to a hen from group 1, one-half blood of our original pair, produces group 5, being five-eighths dam blood and three-eighths sire blood. A cockerel from group 3, three-quarter sire blood, mated to a hen from group 1, one-half the blood of the original pair, produces group 6, five-eighths the blood of our sire. A pullet from group 3, three-quarter sire blood, mated to the original sire, produces group 7, seven-eighths the blood of our original sire.

In the fourth year of our breeding, a cockerel from group 4, seven-eighths dam blood, mated to a hen from group 2, three-quarter dam blood, produces group 8, thirteen-sixteenths dam blood. A cock from group 3, three-quarter sire blood, mated to a hen from group 2, produces group 9, one-half blood of our original pair. A cockerel from group 7, seven-eighths sire blood, mated to a hen from group 3, three-quarter sire blood, produces group 10, thirteen-sixteenths the blood of our original sire.

In the fifth year of our breeding, a cock bird from group 4, seven-eighths dam blood, mated to a hen from group 5, five-eighths dam blood, we get group 11, three-quarter dam blood. A cock bird from group 4, seven-eighths dam blood, mated to a pullet from group 9, one-half blood of our original pair, produces group 12, eleven-sixteenths dam blood. A cock bird from group 7, being seven-eighths sire blood, mated to a hen from group 4, seven-eighths dam blood, produces group 13, one-half blood of our original pair. A cock bird from group 7, seven-eighths sire blood, mated to a pullet from group 9, one-half blood of our original pair, produces group 14, eleven-sixteenths sire blood. A cock bird from group 7, seven-eighths sire blood, mated to a hen from group 6, produces group 15, three-quarter sire blood.

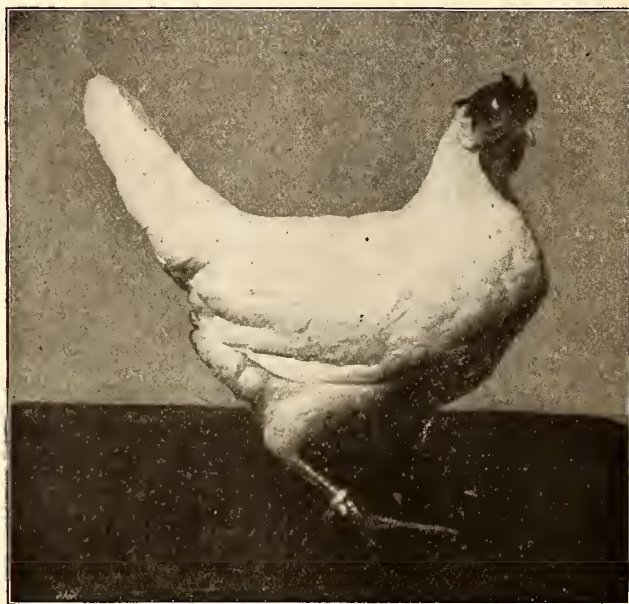

In the sixth year of our breeding a cock bird from group 8, thirteen-sixteenths dam blood, mated to a pullet from group 0, on the chart the best bird we could get in no way related to sire or dam, special care being taken to get a bird strong in any the dam line is weak, the produce of the mating will be group A, one-half of the original dam blood and the pullet 0. A cock bird from group 8, mated to a pullet of group 12, produces group 16, three-quarter dam blood. A cockerel from group 11, mated to a hen from group 9, the produce will be group 17, five-eighths dam blood. A cockerel from group 15, mated to a hen from group 9, will produce group 18, five-eighths sire blood. A pullet from group 14, mated to a cock from group 7, gives us group 19, three-quarter sire blood. Take a pullet, the best we can secure not related to the other lines we are breeding, care being taken to get bird strong in any points in which our own sire line is weakest, having found a bird to our satisfaction we mate it to a cock bird from group 10, from which we get group A 1, one-half blood of our original sire and the pullet 01.

In the seventh year of our chart we mate a pullet from A, one-half dam blood, mating it to a cock bird from group 11, from which we get group B, three-quarter dam blood. A cockerel from group 16, mated to a hen from group 13, gives up group 20, five-eighths dam blood. A cock bird from group 15, mated to a hen from group 11, gives us group 21, one-half blood of our original sire and dam. A cockerel from group 10,

mated to a hen from group 13, gives up group 22, five-eighths sire blood. A cock bird from group 15, mated to the best pullet from group A 1, will give us group B 1, sire blood and one-quarter the blood of the pullet 01.

In the eighth year of our chart a cock bird from group 16, mated to a pullet from group B, will give us group 23, which gives us the blood of our original dam almost renewed to its full strength. A cock bird from group 17, mated to a pullet from group B gives us group 24, being one-half blood to the original dam and the new strain we are to produce. A cockerel from group 22, mated to a hen from group 17, produces group 25, one-half blood of our original sire and dam and only one mating from our new strain. A cock bird from group 18, mated to the best pullet from group B 1, produces group 26, one-half blood of our original sire and the new strain we are producing. A cock bird from group 19, mated to the best pullet from group B 1, gives us group 27; this mating gives the blood of the original sire again almost renewed to its full strength.

In the ninth year of our chart a cockerel from group 25, mated to a hen from a group B, gives us group 28; this mating restores the blood of our original dam to its full strength. We have consumed the blood of the original sire and the blood of the pullet from group 0. A cockerel from group 23, mated to a hen from group 21 gives up group 29, one-half dam blood and one-half blood of our new strain. A cock bird from group

First Leghorn pullet at Syracuse and Hagerstown, 1905. Owned and exhibited by Rock Hill Poultry Farm, Ossining, N. Y.

22, mated to a hen from group 20, gives us group 30. Our new strain is now complete, the blending of the blood of our original sire and dam has in this mating given us a new strain, strong in the fact that we have overcome the faults and combining the best qualities of both sire and dam.

A glance at the chart will show how strong our new strain should be. In group 8 and group 10 we have the blood of the dam and sire at thirteen-sixteenths, which is as close as a safe line breeder should go. From group 8 and 10 the chart shows both lines drawing to a central point, which point on our chart is group 30. A cockerel from group 27, mated to a hen from group 21, gives us group 31, one-half bloods of our sire line

In the eleventh year of our chart a cock bird from group 28, mated to a pullet from group 33, gives us group 39, seven-eighths original dam blood. A cock bird from group 28, mated to a hen from group 30, gives us group 40, one-half bloods of the dam line. A cock bird from group 30, the new strain, mated to a pullet from group 35, gives us group 41, seven-eighths the blood of our new strain. A cock bird from group 32, mated to a hen from group 30, gives us group 42, one-half blood of the sire line. A cock bird from group 32, mated to a pullet from group 38, gives us group 43, seven-eighths the blood of our original sire.

In the twelfth year of our chart a cockerel from group 39, mated to a hen from group 33, gives us group 44, thirteen-sixteenths the blood of our original dam. A cockerel from group 39, mated to hen from group 34, gives us group 45, eleven-sixteenths the blood of the original dam. A cock bird from group 33, mated to a hen from group 35, will give us group

46, one-half bloods on the dam side of the line. A cockerel from group 41, mated to a hen from group 34, gives us group 47, eleven-sixteenths the new strain on the dam side of the line. A cockerel from group 41, mated to a hen from group 36, gives us group 48, restoring the new strain to full blood. A cockerel from group 41, mated to a hen from group 37, gives us group 49, eleven-sixteenths the blood of the new strain on the sire side of the line. A cock from group 38, mated to a hen from group 36, gives us group 50, one-half bloods on the sire side of the line. A cockerel from group 43, mated to a hen from group 37, gives us group 51, eleven-sixteenths blood of the original sire. A cockerel from group 43, mated to a hen from group 37, gives us group 52, thirteen-sixteenths the blood of the original sire of our flock.

Having followed the breeding of our chart, throughout which we have never mated a cockerel and pullet together, care should be taken at all times to guard against breeding from immature stock. The chart was started with a yearling cock and a mature pullet; in the third year of our breeding we should have birds to average as good as the sire and dam we started with. Many breeders fail in line breeding at the eighth to the tenth year by failing to reinforce their breeding lines as shown on the chart when we secured pullets 0 and 01 of our chart. As we follow the lines laid down in our chart breeding from an unbroken line of sires selected of the same shape, weight and color, culling out all that do not literally fill the standard of

First prize Light Brahma cock, won at Cedar Rapids, Iowa. Owned and bred by Dr. N. E. Mighell, Marshalltown, Iowa.

the breed as to shape, weight and color, allowing no freaks or weaklings in our pens, then we can be reasonably sure that like will produce like. The fancier who wishes to reach the top should line breed in pairs, selecting the best from year to year; pullets to be selected to balance any defect in the male; cockerels to be selected to balance any defects in the hens. Never breed two birds together with the same defects; neither should a bird be bred to another whose sire or dam have had the same defect or it will surely ruin the flock.

In line breeding defects accumulate slowly, and only by careful inspection of the birds on the roosts can the evil effects of too close inbreeding be detected. As soon as the breeder notes that his birds lack weight and stamina, eggs largely infertile; males with small wattles; hens lacking dew-lap comb, small for the breed, narrow skull, beak long and head flat; chicks small-bodied and long-legged for the breed, backs narrow, pinched tails, eggs below normal size for the breed; cockerel lacking in aggressiveness, you have violated Nature's laws; failure will be your lot if your lines are not reinforced; the waste in breeding will ruin the flock.

By careful selection and allowing for the waste in breeding by carrying an excess of weight and color we will surely reach the top, where there is always room for the best in any line; the higher we climb the greater will be our reward.

Detroit, Mich.

ADAM M. J. MCKENDRICK.

A CITY LOT POULTRY PLANT.

(Continued from November Number.)

My yard is west of the house and is 26 feet long, with an average width of 14 feet. I fence in a portion of this—12x4 feet—in the spring and arrange a portion of the scratching shed for roosting room for chicks, so that old and young are not together until chicks are well grown.

All my chicks are hatched in a 120-egg incubator at one time and reared in outdoor brooders. Thus with frequent and careful culling I can easily raise twenty to twenty-five pullets, and I have only the one brood to care for instead of using half or more of my yard for a lot of hens with their broods of varying age and size.

In feeding I feed all the birds dry grain and feed it all in litter, so every bird has to work for every meal. My experience with mashers was anything but satisfactory to me in time required or in results obtained, and I am positive I am now getting better results with less time spent by dry feeding.

For the little chicks I buy one of the standard chick feeds and feed it in clover chaff litter and have sifted beef scraps and grit before the chicks from the beginning. When chicks are four to six weeks old I add cracked wheat and oats to the diet. When the chicks are half grown I put them on whole wheat and oats and cracked corn, with an occasional feed of millet or sunflower seed.

For green feed the chicks eat a great deal of the clover, and I give them cabbage or any other available green stuff, but I endeavor to have some other green stuff beside the clover most of the time.

My layers get oats for breakfast, which are put in the litter the night before; wheat for lunch at noon and cracked corn about an hour before roosting time. They also get an occasional feed of millet or sunflower seed. Table scraps are fed in the trough after breakfast. Green feed is the same as the chicks get. All feeds are as generous as they can be and still keep the hens scratching.

On account of the smallness of my yard I cannot keep anything except a shade tree growing in it, but I keep spading it over as often as possible; also let chickens out on lawn frequently in summer, but never let them out of the scratching shed in winter unless the ground is bare and frozen dry.

I water my birds twice a day all the year and in cold weather add enough hot water to take the chill off and prevent it freezing before all the birds have had all they want.

This has been my plan of feeding and housing for several years and sick chickens have been few and far between. The only efficient remedy and preventive I use is death by strangulation. It is so seldom that a bird once seriously ill ever gets strong enough to be fit to use as a breeder or a good layer that I feel it is economy to kill them.

Each year I have managed to increase the average egg production of my pullets and have also improved the standard quality of my flock. I winter only five or six hens and breed from them and the most promising egg-producing pullets, all of which are selected both for egg production and standard points. Each fall I purchase a cock bird for the next season and endeavor to get a male well up to standard, but also of strong, vigorous constitution to counteract the weakening influence of confinement on a flock. I do not believe the male has any great influence on the egg production, provided the hens are hereditary heavy layers.

In all my work I have tried to reduce the time required as much as possible and believe there is very little unnecessary time required in my method, unless the use of trap-nests is considered unnecessary. To me the trap-nest is the greatest help I have in detecting unprofitable birds and also in judiciously selecting my breeders.

With this method I have been able to make the twenty to twenty-five adult birds I winter supply all our eggs for eleven months in the year, or from October 15 to the 15th of the next September. These eggs, figured at market price, together with broilers sold and eaten, make my flock pay a large dividend on all money actually spent, or, if as many figure poultry profits as pay for caring for the birds, I think I am well paid, besides having the pleasure of growing chicks and developing a flock of more typical birds that will always prove they are able to support themselves by their own labor.

If the poultry keeper will always aid the chickens in keeping clean and comfortable in mind and body, his birds will reciprocate at least two-fold.

Cleveland, Ohio.

Monthly Prize Article Department

FEEDING FOR PROFIT AND THE VALUE OF GREEN BONE.

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communication about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded H. M. Borthwick, Boulder, Colo., and second prize to Guy C. Bardwell, Helena, Mont.

EXPENSIVE ECONOMY.

Economy is good, but it makes one smile to see how some people practice it. In order to save a nickel some will spend time and labor worth far more than the amount saved; others will buy an inferior article or do without something they really need in order to save a trifle, when the expenditure of a little additional would bring much greater proportionate value. I find the latter is the case with many poultry keepers in this vicinity, and I imagine also in every vicinity.

This false economy is shown in many ways. First, in the feeding. If you tell a man he is not feeding his hens enough he will say, "I can't afford to feed any more; they do not pay for themselves as it is." He is feeding just enough to keep his fowls alive without having anything left over for egg-forming material. That feed is practically wasted; it barely prolongs the life of his fowls without bringing any return. But if he would add to it a proper amount, in suitable variety, of egg-building material, the hens would pay for it three or four times over. Those who get plenty of eggs are good feeders; those who do not get eggs, as a general rule, are at fault in that they feed too little or too much of one kind. It is often said, "Don't feed too much; your fowls will get fat." But where there is one who feeds too much there are many who feed too little; and with a well-balanced ration there is little danger of over-feeding. Then, if you tell an inexperienced keeper of poultry on a small scale that he ought to feed a variety, to give a balanced ration, to keep his houses, yards and troughs clean, to keep the drinking water fresh and clean, or to do any one of a score of other little things, he is likely to reply, "It is too much bother." He will "bother" to keep a few hens in a half-hearted way and become disgusted with "the little brutes" because they do not furnish sufficient eggs for his household use, while a little extra bother in doing things right would double his egg yield. I have known this to be the case. It is a saying true to the last degree with poultry that "what is worth doing at all is worth doing well."

Another case of false economy is seen in the way some people house their fowls. I know a man in this vicinity who has about 600 hens with suitable accommodations for not more than 100. He thinks he cannot afford to build more houses or repair what he has and make them free from drafts, because his hens do not lay. And no wonder! If he would put up proper buildings for the whole flock the increased profits in the first year would doubtless pay for them. To keep poultry for the best profit one must do it right, just right, and not neglect any of the little points, and never skimp on any food or appliance that is of real value.

This unwise economy practiced by so many poultry keepers is undoubtedly due to ignorance in the majority of cases, but in this day of the world there is no need for ignorance. There is sufficient information in the voluminous literature published. But there it is again. Very many poultry keepers are afraid to get any good literature because it costs something and they cannot see any direct return for it. But fifty cents, for instance, invested in a good poultry journal would bring, in indirect returns, more than enough to pay for it, and would often turn failure and discouragement to success and pleasure.

There is, on the other hand, of course, a limit to expenditures. Fancy houses do not bring better stock or more eggs, and expensive feeds are not always profitable; but where one makes a mistake in the direction of over-expenditure a dozen practice an economy which is in the end more expensive

H. M. BORTHWICK.

It is an old saying among poultry men, "Treat your fowls right and they will treat you right." How treat them right? By proper feeding. The mission of the hen is to lay eggs. To perform that mission she must be provided with the proper material.

In the first place it should be remembered that all food should be clean and wholesome, and only what will be eaten up clean should be fed at a time.

In the morning a warm mash composed of bran, ground oats, cooked vegetable and roots, with fresh cut green bone and a little good condition powder added. At noon some green stuff, such as cut clover and vegetables. Cabbage makes a splendid food when chopped fine, especially as a winter food. Of course, in summer if the fowls have free range or a grass plot green food is not so essential. In winter, when the fowls are confined, it is indispensable.

Hens must have a variety of food to supply her physical wants, and give her a surplus out of which to make eggs. Oats are a good food, but somewhat fattening, hence should be fed sparingly. Corn should not be fed during the summer months and in winter only in moderation.

Too much over-heating and fattening foods, such as corn, oats, barley and hemp, have a tendency to cause soft-shelled eggs. If we feed fat and heat-forming foods there cannot follow the large egg-producing results.

Do not, in your ambition to get out a lot of eggs, overfeed and overstimulate. Watch the effect of the food upon the fowls and when noticed that certain foods produce bad effects discontinue them. A too steady diet of cooked vegetables at this time a year may cause a looseness of the bowels. If the cause is removed the trouble will be remedied. In case that does not check the looseness increase the supply of middlings in the morning mash.

Whole grain should be thrown among litter so the fowls will have to scratch for it. A good plan is to have the floor of the scratch shed covered with clover hay, the sweepings from the hay loft will do as well.

Green cut bone is not used as extensively as it should be, because grain can be obtained and fed with less difficulty, but as an egg-producing food bone is far superior to grain.

Green bone is more than an egg-producer, it is the best growth-promoter and maker of muscle that poultry keepers have yet discovered. Young chicks thrive on it, pullets and cockerels grow rapidly, cocks keep slick and sassy, and laying hens keep up their vitality health to a remarkable degree. In short green bone, fresh cut, is an ideal, a perfect poultry food. Give the hen the proper ration and she will lay the year around, taking only the well-earned rest for moulting. The proper ration always contains the fresh cut bone, because you cannot get the food elements contained in green bone in so convenient a form and in the right proportion in any other substance used as a food. One pound of green bone is sufficient for sixteen hens. Such diet provides fat, nitrogen, phosphates, lime and all other substances required to enable the hen to lay eggs. The cutting of the bone is now an easy matter, as the bone cutter is within reach of all.

Bones fresh from the butcher have more or less meat adhering, and the more of such meat the better, as it cost no more per pound than the bone, while the combination of meat and bone is almost a perfect food from which to produce eggs.

And last but not least is the question of expense. Green bone costs but a trifle; the time spent in preparing it is hardly worth considering, and the saving of the grain bill, not to count in the increased results, make it a source of real economy.

We must not neglect to furnish the hen with plenty of good, hard, sharp grit. Fine gravel containing lime stone will probably supply the deficiency of lime existing in most foods, but the use of some sharper grit may be of advantage. At all times the fowls should be supplied with pure, fresh and clean water.

"Treat your fowls right and they will treat you right."
Helena, Mont. GUY C. BRADWELL.

By placing a hygrometer under a sitting hen the humidity or moisture will register about 60 per cent, while in almost all makes of incubators less than half that amount will be shown. Herein lies the cause of such poor hatches in high altitudes, the air passing too rapidly through the incubator taking the moisture from the egg too fast, drying and toughening the membrane until the chick cannot break through.

Keep the breeding stock out in the open air just as long as you can, give them good housing at night,

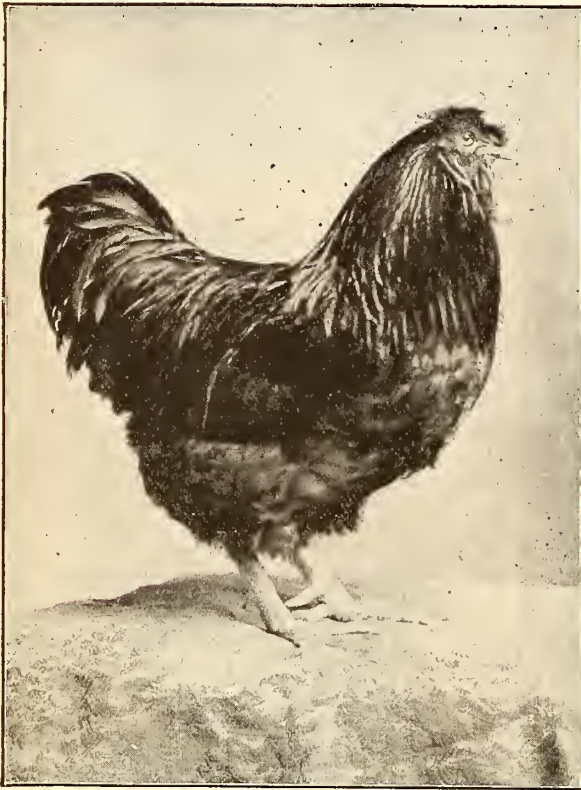

SELECTION AND CARE OF STOCK BIRDS.

New Blood a Necessity—The Essential Qualification of a Male Stock Bird—Selecting the Females—The Care of the Stock Birds.

Written by Rev. C. E. Petersen, Franklin, Me.

The subject contained in our caption is a large one, and of the utmost importance to every breeder of fancy fowls, for without proper selection of the birds that are to be used for stock purposes no progress is possible.

It is true that where no selection of stock birds is made, and the flock is allowed to breed in their own way, that a good bird may be found every now and again, but the exception does not prove the rule, as the tendency is in the downward direction, and the approved specimen would have no power to transmit its good qualities, except it was set apart from the rest of the flock, and by judicious mating and breeding back those good qualities was stored in its progeny, being made permanent by a continuous selection of those same good points or qualities which is the work of years, and whenever the end is attained, so as the transmitting power has become a sure factor in the

First prize Partridge Wyandotte cock, won at Cedar Rapids, Iowa. Owned and bred by Dr. M. E. Mighell, Marshalltown, Iowa.

stock, we then, and only then, have the right to denominate our birds a "strain."

It is therefore easily comprehended that if by selection we can permanently fasten the good qualities of our birds, and build up a flock that will have the desired points for which we have been breeding, that if the greatest care is not shown in the selection that we will fasten perhaps a number of undesirable qualities as well, and therefore careful selection of stock birds becomes one of the greatest factors in our breeding operations.

That new blood sometime or other becomes a necessity in our yards goes without saying, but that new blood becomes a deterrent to success, if continuously introduced, is a fact well known by all breeders, and this is not only true from the fanciers' standpoint, but it is also true from the standpoint of the breeder of poultry for market purposes, as it is as much a matter of importance to him, after having built up a strain of phenomenal layers, to be sure that no blood of an unproductive strain of birds is introduced, that though of the same breed and in fine feather, might spoil the work of years.

Now where a strain of birds is wanted that combines both of these qualities, beauty of feather and strong laying power, the work becomes still more complicated; that it can be done we have never at any time doubted, but still more rigid and careful selection becomes necessary, and to be positively sure of our work of selection there must be an accurate knowledge of the productive power of each female, which cannot be gained in any other way than by the trap-nest system.

Now it is easily seen that sometimes a bird will measure up to standard requirements in every particular, and as far as feather goes all that could be desired, but in the capacity of an egg-producer being the poorest bird in the flock her few eggs would be of value from the exhibition purpose of view-point, but it would breed into the flock the undesirable trait of poor laying.

The temptation is great from the fauciers' point, and let us suppose that he falls into it and does use her as a breeder, and well mated she gives him a few fine birds, and among them is a male bird of exceptional qualities as far as show room purposes are concerned, and he selects this bird for breeding the next season, and there is nine chances out of ten that he will just do that thing, but what is the result? He has mated a male bird whose dam was a very poor egg producer, and who will transmit this undesirable trait to a number of other females, and in a few generations he may build up a strain of birds fit for exhibition but far from satisfactory when it comes to the number of eggs laid.

No; it would have been better to have resisted the temptation and refused to breed from the bird that was a poor layer, as that is the very method that was pursued in the destruction of the phenomenal egg laying capacity of a number of the older breeds; but if careful selection of the stock getters had been carried out with the view in end to preserve that most essential trait they would be as popular to-day as they were thirty years ago.

We believe in fine feathers and birds fit for exhibition, but at the same time in the selection of our stock birds we never lose sight of the utility qualities and strong vitality, for these two last-mentioned requirements are as necessary as life itself for the preservation of the species, and without them the show bird would very soon become extinct.

THE ESSENTIAL QUALIFICATION OF A MALE STOCK BIRD.

First of all take his health into consideration. You ought to know all about him, if he is fit to be thought of as a stock bird, for you will have noticed him from a chicken half grown to maturity, and if he ever showed any signs of poor health discard him. An ailing male bird is no stock getter and will only give you disappointments as a breeder. He must be a strong, healthy bird, as his verility largely will depend on that, and as strong potency should be one of the first considerations in a male stock bird, his complete health is of the greatest importance, as it will save you much trouble in your future breeding operations, and let me say one word here in warning against that foul disease, roup. Watch out for it like you would for the most evil thing that could befall you, and let me tell you right here, and I mean every word of it, if roup should enter my flock I would kill and burn every specimen, however valuable. Under no consideration whatever would I try to cure and save any of them. I would prefer to move out and begin over again than try to make a success with a rousy flock of birds.

He should be persistent in his attentions to the females, even to the forcing of an unwilling mate to receive his attentions. A male that will be baffled in this respect willingly will never make a good breeder, nor will a male who will give all his attentions to one or two females in the flock and refuse the others.

Let him be chosen from a dam who is a good layer, as he has more influence in this respect, as has generally been conceded. And now in regards to the points of Standard requirements. Try as far as possible to make him measure up to all of them. It has been stated too many times that the male is the half of the pen. I am inclined to say that sometimes he is the whole of it, as he will influence every female he is mated to, and if a mistake is made in his selection it cannot be remedied very easily, as he has marked all his progeny.

If a mistake is made in the selection of a female the mistake is limited to her progeny only, which can be remedied, but as has been shown this is not so with the male.

Then again if a male is chosen who is faulty in any of the standard requirements that are inherited we may try to make it up by mating him to females that has not the same fault, but the trouble of it is that we must mate back for good results, and if he was used for such a purpose we would simply intensify the defect, so far that reason see that it is free from any serious defects.

A male stock bird should be a representative specimen of

his breed, with all the breed characteristics well pronounced, and with no physical defects of an inheritable kind.

Crooked toes, crooked back, wry tail, however slight, crooked breastbone, fallen and twisted combs and others of the same character are not to be tolerated in a male stock bird.

In plumage and the color of same let him be the very best that you can select, as his influence is very potent in this respect, and be very sure that he is well furnished in saddle, hackle and tail feather, as a male bird poorly attired in this

The champion R. C. White Orpington cock of the world. Winner of first prize at St. Louis and two firsts at Chicago. Owned by F. C. Bailey, Reading, Mich. See ad elsewhere.

respect loses more than one-half of his beauty, and worse than that, it is inherited, and is one of the things that is likely to be underestimated in its selection.

SELECTING THE FEMALES.

Here, as well as in the case of the male bird, health is first of all to be considered, and females of a good strong constitution should be the first choice in selection, and next size, which also is of great importance. Size in the females is productive of the so much sought after way of how to keep up standard weight, for be it known that if breeding is continued from undersized females it will pull down the strain in size even if a male bird is chosen that is larger than the standard calls for.

The females, if up to the required size called for in the standard and representative of the breed, will increase the size in the progeny of an undersized male bird, but it seldom, if ever, comes out that way if the females are not what they ought to be in size.

Never to breed from undersized females solves the problem of keeping the birds up to size, as all the feeding and forcing you may use will never do the trick if the trouble is bred in the bones.

Let them be uniform in size, shape and looks, as that will secure uniform results in the progeny and show of good breeding. It gives style and individuality to a flock that attracts attention.

This uniformity is always found in a strain of noted breeding, and a judge can pick out at a glance birds belonging to it as easily as if they had the breeder's name stamped on them. Otherwise select the birds that come nearest to standard requirements, but do not use any females with any physical defects, as most of them are hereditary. I of course do not mean any defects that have come by accident, as this last would not hurt the breeding quality of the bird.

If it is a matter of doing the best you can out of a lot of birds that don't score very high, any of them, see to it that the same defects are not present in both male and female, for if they are you will simply breed them in to a greater extent and aggravate matters.

This is all we can say about selection in a general way so as to apply to all varieties, but they are important, and so important that except given attention the question of breeding to feather is out of the question.

THE CARE OF THE STOCK BIRD.

The care of birds to be used for breeding purposes differ to some extent from the care of the rest of the flock, as forcing

for eggs should in every way be depreciated. Any kind of feeding that will tend to stimulate the egg organs into an unnatural activity cannot give the desired results in the breeding yard. The main object should be eggs for hatching purposes, and as this means eggs strongly fertile everything productive of this condition should be utilized.

This means that all fattening foods should be discarded and a mixture of dry grain used as the main rations, and this should be fed in litter, so the birds will be kept active in procuring it. If the birds are fit to breed from, they will be only too pleased to scratch for it, which exercise will keep them in good condition.

Plenty of green food, pure water, grit, fresh air, and sunshine, with a good clean dust bath, will make up all the necessary elements of comfort in the breeding pen.

There is not much science in feeding poultry; for good results, whatever the results desired may be, use common sense, and you have one of the great essentials to correct feeding and management, and this is best shown in the way that some men succeed where others failed, and under same conditions.

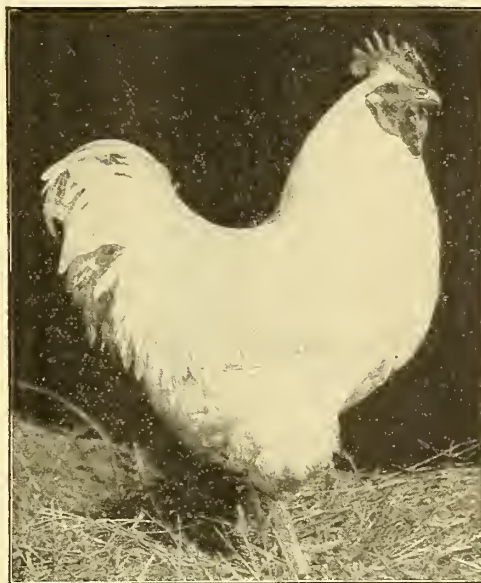

When the breeding pen is made up, give attention to the male bird, and see that he don't go to roost at night with an empty crop.

WHY INCUBATOR CHICKS DIE IN THE SHELL.

There seems to be wide and varied opinions as to why chicks die in the shell, many claim, which is true in a sense, that the germ is weak, caused by too close inbreeding. It is true also that we find weak germs at times when the parent stock is not related.

Too close confinement, with little or no exercise, or improper feeding, will also cause chicks to die in the shell, the germ not being strong enough to withstand the various changes during incubation.

The writer is fully convinced after many careful demonstrations that while the above causes are partially true, that the main cause is improper ventilation, that chicks suffocate from insufficient air. The ventilation of almost all makes of

J. L. Jefferson's (Des Plaines, Ill.) White Plymouth Rock cockerel that won second at the World's Fair, St. Louis.

incubators remain practically the same from the beginning to the end of the hatch, and that while this ventilation may be just right at some stage of the hatch, it certainly is not right all the way through. If the proper amount of air passes through at the beginning of the hatch, the ventilators being of a given and stationary size, then as the chick grows it must have a greater amount of air, and as it is not forthcoming suffocation follows.

The system of ventilation in incubators of to-day is such as to cause a draught, drying the eggs too fast, causing the membrane or lining beneath the shell of the egg to become tough, so much so that at hatching time the chick is unable to break through, many even dying in the shell after being pipped, whereas if this membrane should be kept soft and brittle, as when fresh laid, the chick would easily have picked its way out.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Whose Leg is This Boot On?

"When a fancier desires to make enemies he should become a poultry judge," says a breeder sarcastically. He would have us believe all fanciers are afflicted with sorehead. When the average fancier knows the judge to be honest he takes his medicine with good grace, even though he be left out in the cold as regards ribbons. We cannot see the faults in our own birds that others do, and the judge, if he be honest and impartial, sees the faults in all and awards accordingly. If we could see our birds as others see them, any of us would be competent to judge any class in which we were exhibitors. Judging is a thankless task, as many will testify, but there are some pleasures about it. There is more room in the ranks for good, honest, straightforward judges, but is there not also

room for more exhibitors who can take their pill quietly? More sincerity of purpose, integrity plus—these can be advantageously mixed into our thoughts and actions. An honorable man can be known because of his honor in the fancy's ranks as well as elsewhere. Last winter a certain fancier, whose opinion on a class is worthy of note, accused the judge of not knowing his business and about all else in the catalogue of incapacities. Later the fancier humbly begged pardon and today he is still penitent. His outburst of wrath was smothered by the manhood within. A few more who can make good showmen of themselves will aid the industry.

Hagerstown, 1905.

Webster says that Hagerstown stands for good fellowship; brotherly love; the right hand of kindness; where good feeling runs rampant and oratory comes into its own. Any or all of these are good. McGrew, he who always saves the A. P. A. sessions from that chasm of nothingness; who binds us in his thoughts until we can hear the pin drop; Dr. Lea, of true southern eloquence; Blanton, that champion of the great commonwealth of Virginia, and Miller Purvis, whose ideas blend so kindly with yours, though they be a trifle different in their exact tone—all these met with us at Hagerstown. At the annual banquet Mr. Purvis paid a feeling tribute to the memory of John L. Cost, late superintendent of poultry and who built up the greatest fall poultry exhibition in this country. Mr. Purvis' tribute overflowed with love, sympathy, sadness, kindly spirit, sublime eloquence. Nothing could be added which would increase the tenderness of his words, nor can we refrain from all appreciation of the deceased as we knew him.

A Remedy.

At the majority of fairs this past fall the judging was enough to drive anyone from the ranks. It does seem queer that after advertising a country fair poultry show quite extensively, after providing money for prizes, that the management would provide a suitable judge. All over the West and many dozen places in the East the obtaining of good poultry judges is left till one cannot be obtained. There is only one thing to do to remedy the evil: Let the breeders most interested in a fair get together and wait upon the fair's board of managers when they are in session. Then they may be able to get some concessions. As long as fanciers do not work together to obtain good judges, that long will the fairs be poorly handled. Let the fanciers keep hammering directors, managers and poultry superintendents till they get what is really needed.

Joe Farmer Dead.

Mr. Joe Farmer died at his home near Flushing, Ohio, on the 2d of October. He was the oldest fancier and breeder in that state.

Joe Farmer was born, lived and died near Flushing, Ohio, and there his life work as a poultry breeder brought him reputation all over this country. Over thirty years ago he began breeding

fancy poultry on a town lot, but needing more room for his increasing business he secured a small farm and there carried on the breeding of Plymouth Rocks on a rather large scale. His close attention to business and his skill in selecting and mating soon brought him reputation and trade, while his sterling honesty and fairness made friends of all who dealt with him. Mr. Farmer was a veteran of the Civil War, and had been for forty-five years a member of the Methodist Episcopal church. He is survived by his wife and seven children. A host of friends sympathize with them and deplore the loss of a man who was a credit to any profession. We know the fanciers will be grieved to learn of his death.

When West Meets East.

There is something in the air! When East meets West and the hens cackle, and the cocks crow, we shall see what we shall see. T. E. Orr, Geo. H. Burgett, Geo. D. Holden—knights of hendom, and true—will hit the trail across this Western hemisphere, leaving their footprints on the mud ball, called Mother Earth, to judge the California state show! Ye ghosts of New York winners! how we were startled when the news reached us. Our brains grew dizzy and through space we groped for an unthunk thought. 'Tis here: The enterprising Westerners want more light on the science of henism. They ask these pillars of the judges' dusts in to their coming love feast and hen show to dispense knowledge and test their interpretations of the new standard—and they'll get this and more, straight from the shoulder. As an advertisement for show and judges the plan will be a leader. And it will help to bring the effete East and ready West closer to the boundary of exactness, as laid down in the law. We await the outcome and shall watch coast journals' comments closely. Out of the union may there come good.

From the news that crosses the pond one would say that the pigeon fancy is in full bloom in England. At a recent auction of a fine loft of Owls some long prices were realized, the whole flock bringing nearly \$4,000. Truly, this must be a record sale. There were only something over a hundred birds in the collection, but they were top notchers, indeed. It would take a great deal of enthusiasm, it seems to us, for one to bid such a price on the birds of any kind. But does not the maker of a top sale get the best there is in advertising as a result? We think so; and further, that he ought to be advertised.

* * *

And now an Englishman is trying his hand at the Gold Barred Plymouth Rocks! This seems to be a hobby for two or three on this side of the water, also. No doubt the finished product of some breeder's skill will be placed before us some day soon. Imagine, if you can, the last rays of a setting sun casting their entrancing lights on the plumage of a Barred Plymouth Rock, barred in gold and white. The glory of a peacock, dazzling qualities of a Rubens, warm with color; the practical qualities of a bumble bee—all these merged into a fowl, and that fowl the Golden Barred Plymouth Rock. When

the sight of this bird, perfected as only it should be, before giving to a poultry-mad public, is met by our growing dim eyes— Oh, thunder! The idea is elusive, and now is gone. Pardon us for the effort, please.

Artist Sewall reports from across the Atlantic that the Red Sussex fowl of that little isle is almost the counterpart of the Rhode Island Red. The latter has the yellow beak, skin and legs while the former has the white or pinkish white.

It would require more diplomacy than the ordinary fancier among us possesses to draw the line between faking or trickstering and honest showing. Where does the one cease and the other begin? When does fitting stop and artificiality commence. A writer in the great English *Poultry* says he has noted that the most serious refitting of fowls for shows occurs among the biggest and most advertised breeders. This writer may not be able to justly draw the line. One thing is sure: He has positive convictions!

Some of the leading English specialty clubs have been asked by some Canadian shows to contribute special prizes. Mr. A. W. Bell, secretary of the Canadian National at Toronto, asks some of the English clubs to offer specials at that exhibition. He says that the Canadian National will reciprocate. *Poultry*, our English contemporary, suggests that this might be a valuable exchange between the mother country and her colonies, and that it would help Britain's international trade.

The Kansas White Wyandotte Club hoped to do better in the laying contest they inaugurated than the results show! The White 'Dottes were woefully beaten by both the Rose Comb White Leghorns and the Single Comb White Leghorns, as well as the American Reds. Six Single Comb Whites laid 585 eggs during the year; six Rose Comb Whites, 528; the American Reds 520, and the White 'Dottes 799! Buff Wyandottes, Barred Rocks and Light Brahmas finished in the order given. Only ordinary care was given and no hot mashes were fed. This should whet the appetite of Coburn, that Kansas advertising wizard, and get him to start a contest that would really be a competition and advertise the state immensely.

We are informed that a very fine exhibit of Columbian Wyandottes is expected at Madison Square Garden, New York, and quality that will astonish all breeders and judges. A large string of specials is offered and a meeting is called, the object of which is the formation of a club. We are informed that all papers are in the hands of the secretary of the American Poultry Association,

and the admission of the Columbians is assured at the next meeting in Cincinnati in January. Leading breeders of this variety report wonderful interest in this variety; many of the oldest breeders and judges taking them up. It is said wonderful improvements have been made in them the past year.

Whispers of the wind tell us that an order from the court will force the American Reds into the standard. Cincinnati may yet become famous in the history of the American Poultry Association!

Gradually new ideas of worth enter into the management of poultry shows. The great Eastern poultry exhibition is held at the Grand Central Palace, November 13-17, this winter. The famed horse show takes place at the same time, which the directors hope will aid the out-of-town attendance. The same management that held the Herald Square show last year is in the saddle. A new rule, and one that may prove to be good, is that the names of no judges will be given out until entries have closed and the catalogue of them printed.

ON MY COUCH IN NEWTON HOSPITAL.

EDITOR BATES:—In reading your report of the A. P. A. meeting at Hagerstown I see I am accused of publishing a book, *Standard of Perfection*, to sell at 25 cents, published by one Donohue & Co.

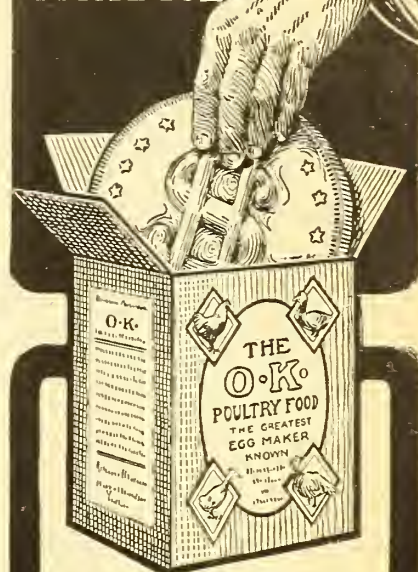

This is false. I have not put such a book on the market and have no pecuniary interest in the same; have not seen the book even.

Again Mr. Crawford asserts I am no longer a member of the A. P. A. Again this is false, as you were the presiding officer at Rochester and know that instead of giving me the honorable discharge I asked for that I might not be censured for adhering to the decimal system in applying the Standard—that instead of giving me the discharge they passed a vote of confidence in my attitude towards the A. P. A. I ask you to print an article in keeping with this letter denying the aspersion offered by Mr. Crawford. I still am loyal to the written description of the Standard but utterly opposed to its application by the 11 or more scales of points demanded, for strict justice can only be secured to all breeds alike only by one rule and score card in applying it.

I. K. FELCH.
Since receiving the above letter we have another letter from Mr. Felch as follows:

"Since writing you, I learn that the book in question is a reprint of a portion of my book 'Poultry Culture' under a new name, put out by Chicago book publishers; done wholly without my knowledge or sanction. I. K. FELCH."

PROFIT IN EVERY PACKAGE

O. K. MAKES POULTRY PAY

O. K. Poultry Food is the greatest egg-maker known. It keeps fowls healthy and active, and by invigorating the system puts it in shape for increased egg-production. It is a pure, guaranteed conditioner—in other words it furnishes the elements needed to put the physical and egg-making organism in perfect condition. The digestive organs are assisted, the vitality increased and your hens look better, feel better, grow better, and lay better. Instead of scrawny specimens, which are too weak and worried to lay, or overfed fowls, which are too fat and lazy to do so, you may just as well have a fine flock of feathered beauties piling up profits in the shape of eggs and meat. Why not begin feeding

O. K. POULTRY FOOD

and make your poultry pay? O. K. Poultry Food cures Gapes, Roup, Cholera, Indigestion, Leg Weakness, Diarrhea and all kindred diseases—promotes growth and development in young fowls. We prove our claims by the experience of our customers. Witness the following:

Bine Island, Ill., Jan. 16, 1905.
The O. K. Stock Food Co.,
Monon Bldg., Chicago.

Gentlemen:—I take pleasure in saying that I have used your O. K. Poultry Food for three seasons and after having had experience with several other makes, have decided that your brand is superior to anything else offered in this market, and have for the last two years used it exclusively. I am very well pleased with the results obtained as my fowls are in the "pink" of condition and certainly produce eggs in larger quantity than when I undertook to do without any food of this character.

You are welcome to use my name and endorsement at all times.

Yours very truly,
[Signed] J. CUNNINGHAM,
Breeder of Rhode Island Reds.

Trial size mailed for 10 cents.
O. K. Stock Food Co., 408 Monon Bldg., Chicago

Bred to Win and Bred to Pay

2000 OF RANKINS ROYALS OR AMERICA'S BIG FOUR

Barred, White and Buff Rocks, and White Wyandottes that are **bred for quality in every way**. You can't afford to buy show birds or breeders before writing me. I will mail you the handsomest catalogue you ever received if you will mention this paper.

H. P. RANKIN Box 61, Hartington, Neb.

CRITICS AND CRITICISMS

There are a few criticisms being offered by the knowing ones of the poultry fancy at more or less opportune times, and in this department I shall bring them before the many readers of this journal, that they may know what others think and are saying. Editor Bates has been very kind in allowing me the use of a pen name and I trust that if I occasionally overstep the boundary of judiciousness in the use of it that readers will pardon me. I take a great interest in what the brethren do and say, because in, around and about their words and actions, are straws which show the direction of the wind. Now, we are off!

Geo. E. Howard, editor of the Feather, has, in the last few issues of that paper and his American Fancier, been busy pointing to the fact that Boston's dates and those of Cincinnati conflict. He tells why they should not conflict in plain language. Read it:

"For some unknown reason the management of the Cincinnati show and the president and secretary of the American Poultry Association have selected the week of January 16 to 20 for the next meeting of the American Poultry Association to be held in Cincinnati, Ohio. There is scarcely a poultryman throughout the United States that does not know that that week is the week always selected by the management of the Boston show. It was announced last winter during the show that the same week would be taken for January 16, 1906. It was thoroughly well known that matters of the gravest interest to the eastern breeders will be brought up at the Cincinnati meeting; yet in the face of all this, the responsible parties above mentioned have selected and announced the Boston dates. It would be utterly impossible for the Boston management to change their dates, from the fact that they must make contract for the hall a year in advance, the same as must the New York management for the Garden show."

We clip this from Fancier of November 11. In previous issues he said that this conflict of dates looked like an invitation for Eastern members of the A. P. A. to stay away from the Cincinnati meeting. He suggests that some have used their influence to take the meeting as far away from the Eastern contingent as possible. It is further suggested that a feeling has already begun growing and that this may ripen into an outspoken accusation against those who have used their influence. We are not acquainted with the facts of the case and grope about blindly as does our editorial brother. Perhaps, after all, the conflicting shows have not been prearranged. Let us hope for the best!

Our friend Drevenstedt, of Johnstown, sage of hendom and filler of the duster, says there are a few of us yet who would disqualify a good bird because of a bit of off color. He hopes the day will come when color disqualifications are let to slide and "rational" laws govern the awarding of prizes. Like some others, he omits giving us a remedy. A philosopher has said we should not tear down unless we are able to build something better. And

Drevenstedt should think of this. When disqualifying clauses are even partly done away with the mass of buyers are rather unprotected, eh?

* * *

Editor Atherton, of the American Stock Keeper, says that the Standard is not explicit enough concerning the disqualifying clauses and the existence of down on feet and shanks of bare-legged specimens. If the Standard is not explicitly worded it is because the makers overlooked it. That's the way it looks to us, at least.

* * *

It is good to see or read a man's argument when that man is a square debater. Mr. Sledd, of the Hen, has been accused of upholding the practical side of the industry too much when his support comes from the fancy. The fancier, says Mr. Sledd, gets the biggest part of his business from the practical poultryman and this demand is constantly increasing. This is exactly what we think of it, and the accusers of Mr. Sledd had best awake.

* * *

The criticism I shall here apply to poultry associations will be more in the nature of hints. Now, that the premium lists begin to flood in on us again the idea strikes me that it would be a good plan for secretaries to embody in their lists the past records of their association pertaining to previous shows only. Let them tell how large each show was for the past three years at least. Use a page and make a sort of table telling when premium money was all paid, size of show, where held, number of exhibitors, number of birds and of birds in each class.

Why do all this?

Because there are a good many shows in one section, and a table of this kind would help the unknowing and prospective exhibitor to place his exhibits and better plan the show campaign. Every year there are new exhibitors who hardly know where to show and the majority want to get into something deeper than average competition, hence tables of this kind would aid them. If they wanted to get in slow company the table would help even then, wouldn't it?

The writer invites criticism of the suggestion, and answers should be sent to American Poultry Journal for the Critics' department. We learn most by sifting all our ideas and selecting the best for use.

* * *

Mr. Schareman of Commercial Poultry seems to strike a popular cord in his late editorial concerning the abolition of the custom of electing the president of the American Poultry Association from the state in which the annual meeting is held. We are pleased and again not pleased to see a number of the brethren of the country taking up this foolish old custom, as they call it, and tearing it to threads. We are not pleased because it will injure the aspirations of many who hope to be officers of the association in the near future, and it will please many who have the best interests of the association at heart. There is one thing sure, and that is that the A. P. A. should get down to business and elect the best president or the best man fitted to the presidency of the association, regardless of his residence.

We think that the A. P. A. should elect its president for two years and not allow him re-election, telling him that two years is long enough for him to make his mark and hand it down to the poultry breeders of the country. We may have more to say concerning this when the opinions of others are seen.

* * *

Some say the new Standard is not well received. Others declare that "it's a dandy" and laud it to the skies! Well, we like it, anyway. And, too, this is a free country. The reader may dig our meaning out for himself. To date, so Mr. Orr tells us, there have been ordered and paid for 8,800 copies of the new edition. Mr. Orr was criticised when he said that by the first of July, 1906, all of 10,000 would be needed. But the fanciers have helped him make good his statement. The few errors in it may aid its sale, as at times we see one who buys just to find the flaws and faults! With an errata slip printed and mailed to those interested enough to send a stamp for it, the work will suit thousands.

* * *

While mentioning Secretary Orr it might be well to tell how he calls himself on the carpet. He stands back and away from his office and affairs long enough to see it in perspective. Then he criticises himself, as it were, and this probably has much to do with his efficiency. His last report, dated November 15, shows that as time goes on he is that much better prepared to execute the duties of his office. He is, indeed, a patron of detail and goes into it fully. He tells us that there are to be some changes in the constitution, if members will have it that way, at Cincinnati. Also that six of the executive committee signed a petition for a called meeting of the A. P. A. at San Francisco on November 30, 1905. This meeting is to better acquaint the Pacific coast with the association. We understand that he, President Holden and Judge Burgott are to officiate at the coming San Francisco show and that the actual business of this called meeting will be for the purpose of receiving new members. There will be nine new varieties of Orpingtons clamoring for admittance to the Standard at Cincinnati. The Rose Comb Buff Leghorns and Rose Comb Rhode Island Reds will also come up for entry.

* * *

There is a man in New York named Fred Van Patten and he built a new poultry house, so the story goes. After the cement floors were laid, the paint was dry and the whole was exceedingly good to look upon, the churches of two little hamlets, Manlius and Fayetteville, united and held a meeting calculated to display much good feeling and kindly cheer. Van Patten is a Syracuse business man, who thinks lots of his hens. His new poultry house is a round building boasting of ninety windows and is seventy-five feet in diameter. It's one of the best in the state, so poultrymen say who have seen it. The night of the entertainment the new henhouse rafters resounded with music and song and was voted a cackling success! We are patiently awaiting the next.

SPECTATOR.

A TRIP IN THE EAST

A Representative of American Poultry Journal Visits Some of the Large Eastern Plants and Makes Brief Mention of Same.

Our first visit was to the home of E. L. Miles, at Sag Harbor, L. I., N. Y., where the great Montauk strain of Barred Plymouth Rocks is bred, and here we found Barred Rocks in their purity. Mr. Miles has devoted the past 29 years to the development of this variety, and while he has never exhibited outside of Long Island, birds of his strain and breeding, have won in nearly all the large shows of the country. A visitor to Mr. Miles' home will find nothing but Barred Plymouth Rocks, and at the time of our visit Mr. Miles informed us that it kept him busy supplying the demand for good exhibition and breeding birds. Mr. Miles, with his years of study and experience, is able to so mate his birds that the percentage of really good birds is something to wonder at.

While in Sag Harbor we visited the yards of Mr. Warren Sherman, who is another Barred Rock enthusiast. Mr. Sherman was not at home, but we took the liberty to look over his flock, and he certainly had some good ones, and we predict that he will be heard from in the show room in the near future.

Our next visit was to Gedney Farm, White Plains, N. Y. The poultry department of this farm is under the management of Mr. Frank Gaylor, the well-known poultryman and judge. Mr. Gaylor has probably planned and started more large poultry plants than any other man in the east, and the Gedney plant is a creation of his, and is one of the best arranged plants we have visited anywhere. Mr. Gaylor is a Buff Orpington enthusiast, but he has on this plant several varieties, and nothing but the best of each. Our visit here was very short, as it was late in the afternoon before we arrived, but nowhere on our trip did we spend a more pleasant two hours, and one who visits this plant may feel assured of a hearty welcome.

From White Plains, N. Y., we went to Waltham, Mass., and spent a half day in the Grove Hill Poultry Yards. Mr. Smith, the manager, was absent in Boston, but under the guidance of one of his assistants, we made a trip over the entire plant, where we saw Single Comb Brown Leghorns and Barred Plymouth Rocks by the hundreds. This is one of the largest poultry plants in the east devoted to the raising of thoroughbred fowls, and we were surprised to learn that all the hatching and rearing is done with hens. The young stock in Barred Rocks on this place were exceptionally fine. Birds from these yards, it will be remembered, made a remarkable record at the big Chicago show two years ago. They also won ten first prizes at St. Louis World's Fair last year. In fact, they always win wherever exhibited.

We also paid a short visit to the yards of the late C. F. A. Smith, Waltham, Mass., where we looked over as fine a bunch of White Wyandottes as will be found anywhere. These yards are under the direct management of Miss Smith, a sister of C. F. A. Smith, who had been breeding White Wyandottes for the past sixteen years, and she is keeping the stock up to the same high plane where her brother placed it.

From Waltham we went to Lancaster, Mass., the home of A. C. Hawkins and C. H. Latham. In the yards of Mr. Hawkins we saw some very fine specimens in Barred, White and Buff Plymouth Rocks and Silver, White and Buff Wyandottes. There is probably no man in the poultry world that is better known than A. C. Hawkins, who has been breeding and advertising Barred Plymouth Rocks for the past twenty-five years. The other varieties he took up at a later period, but breeds them to the same high

standard he does the Barred Rocks. Mr. Hawkins showed us a Barred Rock cockerel that will probably be heard from at Madison Square. He certainly was a fine specimen.

Owing to lack of time we were unable to go through the yards of Mr. Latham, but spent a short time at his home, and talked "chicken" with him. He is a great admirer of the Barred Plymouth Rock and certainly knows how to breed for best results, as his show record proves. He is preparing a string for Madison Square Garden show and will no doubt win his share of the blue ribbons.

Our next stop was at Lee, Mass., where we visited the yards of Bradley Bros. The name Bradley is so closely associated with Barred Plymouth Rocks that it

Another New Prairie State Improvement The Fresh Air Incubator

The Open Front House

It is conceded by progressive poultrymen everywhere that perfect health is absolutely essential to a large production of eggs of the greatest possible fertility for hatching. Nothing contributes more to perfect health than the open front house, where the fowls are protected from the rain, wind and weather, yet live in the open air. Such birds are strong and vigorous, overflowing with vitality and will return more for their care and feed than birds housed by any other system. The open front poultry house is another practical demonstration of the value of fresh air.

The Open Front Coop

When the poultryman desires to grow young birds for best development, or for largest profits, he puts them out of doors in an open front colony coop. Under which conditions chicks develop naturally, store up vitality for future need, grow hearty and rugged, and are in prime condition by autumn. If intended for market, they put on flesh in the fattening crate in the least possible time at least cost. If intended for breeders the outdoor grown bird will be the most productive. Fresh air is a tonic—a vitalizing force which nature supplies free of cost. If we do not shut it out it works for our benefit.

The Open Air Treatment For Building Vitality

The most successful treatment for tuberculosis, in human beings, is known as the open air treatment, where the patient lives out of doors in a tent or house with canvas walls, because experience has shown that only by this treatment can the fast waning vitality be restored and the best conditions prevail for winning what otherwise would be a losing battle with this dread disease.

The Virtue of Fresh Air

The open front poultry house, in which birds are exposed to unlimited quantities of pure, fresh air all the time, makes strong breeders, which lay highly fertilized eggs, and young stock which grow rugged and fatten quickly and profitably. And what is true of fresh air for fowls and chicks is equally true of fresh air for the growing germ in the egg. The best results in hatching are attained by allowing the eggs to remain in the same natural air conditions during the process of incubation. This is possible in the 1906 Standard Prairie State open bottom Incubator—the latest addition to the great Prairie State line—which applies the benefits of fresh air to artificial incubation in an entirely new and effective way, making it possible to raise healthier, brighter, stronger chicks. This new feature and many others are fully explained in our new, FREE Standard Prairie State Incubator catalog—just out of press. To keep up-to-date you ought to read this book. Write for a copy today, also ask for new brooder catalog. It's FREE, too. Progressive poultrymen know that improvement is the order of the day—that new methods and new machines are constantly being devised to simplify the processes of incubation and brooding. We're making so many improvements that we are issuing new books all the time describing them—ask us to put your name on our mail list so you'll get them all FREE as fast as they are published.

**The
Open Bottom
Fresh Air Incubator**

Prairie State Incubator Co.

468 Main St.,

Homer City, Pa.

seems hardly necessary to mention the variety. Here we saw many of the famous prize winners and their offspring. Bradley Bros. have bred Barred Rocks for more than twenty years, and for the past sixteen years birds of their breeding have been winners at the great New York show. They had about twelve hundred head of young stock on hand at the time of our visit, and among them were some very fine specimens, especially in the male line. They keep a very accurate pedigree of all their stock, and can tell the breeding of every bird on the place, and it is this method that has enabled them to put their strain in the front rank, where it stands to-day.

Our next stop was at the home of C. H. Welles, Stratford, Conn., at which place we arrived too late to look over the place, but had a very pleasant visit with Mr. Welles and his family. Mr. Welles is another Barred Plymouth Rock breeder who has made an enviable reputation. In fact, his reputation as a breeder of Barred Plymouth Rocks is world wide, and only a short time ago he was visited by representatives of the Japanese government, who purchased two pens of his birds to go to that country. Any one who goes to the New York show should not fail to get acquainted with Mr. and Mrs. Welles.

At Newburgh, N. Y., we visited the Aspetong Farm Poultry Yards. These yards are under the management of Mr. J. J. Anthony, and are devoted to White Wyandottes and White Leghorns. Mr. Anthony had just returned from the New York show, where he had made some good winnings on White Wyandottes. This plant is comparatively new and the buildings are all of modern construction. They were just finishing a cockerel house, which for convenience and economy is far ahead of anything we have seen in our travels. Visitors are always sure of a hearty welcome here.

Our last visit was to the yards of Wm. Cook & Son, Scotch Plains, N. J., the originators of the Orpington fowl. Here we spent a couple of hours admiring the beauties of this useful breed, and listening to Mr. Cook explaining the good points of this or that bird. This firm had a large string of birds at the Great Eastern show in New York City, and Mr. Cook informed us that they won 18 first prizes, and that their total winnings at this show amounted to over a thousand dollars. This plant is beautifully located on the main road to Jersey City. The housing capacity at the present time is about 5,000 birds, and they are constantly adding new buildings and yards to this already large plant. They are compelled to do this to meet the demands of their rapidly growing trade. Visitors are always welcome here and will go away feeling well paid for the time spent.

The Great Eastern Poultry Show.

The Second Annual Exhibition of the Association of Poultry and Pet Stock Breeders--Held in Grand Central Palace, New York City, November 13-17, 1905.

Written by J. W. Bell, Associate Editor, American Poultry Journal.

This show is the creation of Dr. Paul Kyle, Flushing, L. I., N. Y., and is the second one under his direct management. While some claim that there is no necessity for two shows in New York City, others say that there is plenty of room for both, as long as they are held two months apart. This show is of a local character, and the management is to be commended for the attractive and nicely arranged display they prepared for the public on such a short notice, as we understand they were less than six weeks in getting this exhibit together.

There was something over twenty-one hundred fowls on exhibition, and while some of the classes were small, others were large enough to offset this. The birds in all the classes were of fair quality and exceptionally good in some.

The Barred Plymouth Rocks were rather a small class, but some good individual specimens were shown.

The White Plymouth Rocks were well represented by as good a lot of this variety as one would care to look at, and the competition was keen.

The Buff Plymouth Rocks were a very small class, as was also the Partridge Plymouth Rocks.

The Wyandotte family was well represented, and the Whites were especially strong and the competition very hot.

Black Langshans were few in number and of medium quality.

The Orpingtons were the strongest class in the show, being represented by the Buffs, Blacks, Whites and Jubilees, in both rose and single comb.

Single Comb White Leghorns were also well represented; in fact, the whole Leghorn family.

Minorcas were also fairly well represented.

The surprise of the show, to us, was in Indian Games. They were out in goodly numbers and the interest taken in them shows that the fanciers are taking renewed interest in this variety.

The Rhode Island Red fanciers made a very creditable showing, and the prizes were well distributed.

There was a good display of turkeys, ducks and geese, and some choice specimens were shown.

LIST OF EXHIBITORS.

James Aird, Matteawan, N. Y.; Louis Anderson, Bloomsbury, N. J.; W. M. Anderson, Oak Summit, N. Y.; J. W. Andrews, Dover, N. J.; Albert Ballinger, Bellville, N. Nettleton, 3d, 4th; Flushing Poultry Yards, 5th. Pullets—Klee Bros., 1st, 2d; Flushing Poultry Yards, 3d, 4th; Albert Ballinger, 5th.

BARRED PLYMOUTH ROCKS.—Cocks—Klee Bros., 1st; Chas. Staaf, 2d; John Swayek, 3d, 5th; Columbia Farm, 4th. Hens—Frank D. Ham, 1st, 2d; John Swayek, 3d; Frank Hayner, 4th; W. S. & H. O. Vosburgh, 5th. Cockerels—John Swayek, 1st; Chas. Staaf, 2d, 3d; Elm Poultry Yards, 5th. Pullets—Frank D. Ham, 1st, 4th, 5th; John Hayner, 2d; Elm Poultry Yards, 3d.

WHITE PLYMOUTH ROCKS.—Cocks—Greystone Poultry Farm, 1st, 4th; Elm Poultry Yards, 2d, 3d; Chas. A. Kahle, 5th. Hens—Chas. A. Kahle, 1st, 4th; Elm Poultry Yards, 2d; Greystone Poultry

Farm, 3d; Coretavis Poultry Yards, 5th. Cockerels—Greystone Poultry Farm, 1st; E. A. Haring, 2d; Elm Poultry Yards, 3d, 5th; Coretavis Poultry Yards, 4th. Pullets—W. A. Wagner, 1st; Greystone Poultry Farm, 2d, 3d, 4th; Willis A. Totman, 5th.

BUFF PLYMOUTH ROCKS.—Cocks. Chas. A. Kahle, 1st. Hens—Andrew Riddell, 1st. Cockerel—Andrew Riddell, 1st; E. Bergquist, 2d. Pullets—Andrew Riddell, 1st; Chas. A. Kahle, 2d, 3d; E. Bergquist, 4th.

PARTRIDGE PLYMOUTH ROCKS.—Cocks—Chas. A. Kahle, 1st, 2d. Cockerels—Chas. A. Kahle, 1st, 2d, 3d.

SILVER WYANDOTTES.—Cocks—Wood & Freeman, 1st; Flushing Poultry Yards, 2d, 4th; Dr. E. A. Trist, 3d. Hens—L. Van Sise, 1st; Wood & Freeman, 2d; A. T. Beckett, 3d; Flushing Poultry Yards, 4th, 5th. Cockerels—Flushing Poultry Yards, 1st. Pullets—A. T. Beckett, 1st, 3d; Flushing Poultry Yards, 2d, 4th.

GOLDEN WYANDOTTES.—Cocks—Flushing Poultry Yards, 1st; Wood & Freeman, 3d; Chas. A. Kaschub, 2d. Hens—Chas. A. Kaschub, 1st; Wood & Freeman, 2d; L. Van Sise, 3d; Flushing Poultry Yards, 4th, 5th. Cockerels—Wood & Freeman, 1st; L. Van Sise, 2d; Flushing Poultry Yards, 3d. Pullets—Wood & Freeman, 1st; Flushing Poultry Yards, 2d, 3d.

WHITE WYANDOTTES.—Cocks—H. Havemeyer, 1st, 4th; Aspetong Farm Poultry Yards, 2d; Elm Poultry Yards, 3d; John F. Hollis, 5th. Hens—H. Havemeyer, 1st, 2d, 3d; Elm Poultry Yards, 4th; Willmount Farm, 5th. Cockerels—John F. Hollis, 1st; Aspetong Farm Poultry Yards, 2d, 5th; H. Havemeyer, 3d; Willmount Farm, 4th. Pullets—Elm Poultry Yards, 1st; Mrs. E. Turner, 2d; H. Havemeyer, 3d, 4th, 5th.

BUFF WYANDOTTES.—Cocks—Andrew Riddell, 1st; Rufus Y. Coolidge & Son, 2d; Flushing Poultry Yards, 3d. Hens—Rufus Y. Coolidge, 1st, 4th; Andrew Riddell, 2d, 3d; Flushing Poultry Yards, 5th. Cockerels—Geo. M. Bell, 1st; Rufus Y. Coolidge & Son, 2d, 5th; Andrew Riddell, 3d, 4th. Pullets—Geo. M. Bell, 1st; Andrew Riddell, 2d, 4th; Rufus Y. Coolidge & Son, 3d, 5th.

SILVER PENCILED WYANDOTTES.—Cockerels—L. B. Custer, 1st; F. R. Vernon, 2d. Pullets—L. B. Custer, 1st, 2d.

PARTRIDGE WYANDOTTES.—Hens—E. L. Tallman, 1st, 2d.

COLUMBIAN WYANDOTTES.—Cockerels—L. H. Davis, 1st, 2d; M. S. Gooding, 3d. Pullets—L. H. Davis, 1st, 2d; M. S. Gooding, 3d.

BLACK WYANDOTTES.—Cock—Flushing Poultry Yards, 1st. Hen—Flushing Poultry Yards, 1st.

BLACK LANGSHANS.—Cock—Henry Candell, 1st. Cockerel—Henry Candell, 1st. Pullets—Henry Candell, 1st, 2d.

SINGLE COMB BUFF ORPINGTONS.—Cocks—Wm. Cook & Son, 1st, 2d; White & Goodacre, 3d, 4th. Hens—Dr. Paul Kyle, 1st, 5th; Wm. Cook & Son, 2d, 3d, 4th. Cockerels—Wm. Cook & Son, 1st, 2d, 3d;

White & Goodacre, 4th, 5th. Pullets—Wm. Cook & Son, 1st and 3d; Dr. Paul Kyle, 2d; A. E. Park, 4th, 5th.

SINGLE COMB BLACK ORPINGTONS.—Cocks—White & Goodacre, 1st; Dr. M. S. Sherwood, 2d; Wm. Cook & Son, 3d, 4th, 5th. Hens—Miss G. Wiedemann, 1st; White & Goodacre, 2d; Wm. Cook & Son, 3d; A. E. Wright, 4th; Dr. M. S. Sherwood, 5th. Cockerels—Wm. Cook & Son, 1st, 2d, 3d; White & Goodacre, 4th, 5th. Pullets—Wm. Cook & Son, 1st, 2d, 3d; White & Goodacre, 4th; Wm. J. Housley, 5th.

SINGLE COMB WHITE ORPINGTONS.—Cocks—White & Goodacre, 1st; Wm. Cook & Son, 2d. Hens—Wm. Cook & Son, 1st, 3d, 5th; White & Goodacre, 4th. Cockerels—Wm. Cook & Son, 1st, 3d; Cycle Hatcher Co., 4th. Pullets—Wm. Cook & Son, 2d, 3d; Cycle Hatcher Co., 4th.

ROSE COMB BUFF ORPINGTONS.—Cocks—White & Goodacre, 1st; Wm. Cook & Son, 2d. Hens—Wm. Cook & Son, 1st; White & Goodacre, 2d. Cockerels—Wm. Cook & Son, 1st; J. W. Andrews, 2d. Pullets—Wm. Cook & Son, 1st; J. W. Andrews, 2d; White & Goodacre, 3d.

ROSE COMB BLACK ORPINGTONS.—Cock—Wm. Cook & Son, 1st; Chas. E. Faber, 2d. Hens—Wm. Cook & Son, 1st. Cockerel—Wm. Cook & Son, 1st. Pullet—Wm. Cook & Son, 1st.

ANY OTHER VARIETY ORPINGTONS.—Cocks—Wm. Cook & Son, 1st, Diamond Jubilee; White & Goodacre, 2d, R. C. White. Hens—White & Goodacre, 1st, R. C. White; J. Hayner, 2d, S. C. White; Wm. Cook & Son, 2d, Diamond Jubilee. Cockerels—White & Goodacre, 1st, R. C. White; J. Hayner, 2d, S. C. White. Pullets—White & Goodacre, 1st, R. C. Black; J. Hayner, 1st, S. C. White.

BLUE ANDALUSIANS.—Hen—R. H. Quackenbush, 1st. Cockerel—R. H. Quackenbush, 1st.

SINGLE COMB WHITE LEGHORNS.—Cocks—Elm Poultry Yards, 1st, 2d; Monmouth Poultry Farm, 3d, 4th; H. V. Bump, 5th. Hens—Monmouth Poultry Farm, 1st, 2d; Elm Poultry Yards, 3d; Deepdale Farm, 4th, 5th. Cockerels—Elm Poultry Yards, 1st; H. V. Bump, 2d; Thomas T. Davey, 3d; Monmouth Poultry Farms, 4th, 5th. Pullets—Elm Poultry Yards, 1st; H. V. Bump, 2d; Thomas T. Davey, 3d; Monmouth Poultry Farms, 4th; Hubbard & Williams, 5th.

SINGLE COMB BROWN LEGHORNS.—Cock—Elmer Holburk, 1st. Hens—Hubbard & Williams, 1st; Elmer Holburk, 2d; H. M. Moyer, 3d. Cockerels—Elmer Holburk, 1st; Ed. C. Noonan, 2d. Pullets—L. C. Gunnell, 1st; H. M. Moyer, 2d; Hubbard & Williams, 3d, 5th; Elmer Holburk, 4th.

SINGLE COMB BUFF LEGHORNS.—Cockerels—Thomas T. Davey, 1st; Harry Hawkins, 2d. Pullets—Thomas T. Davey, 1st; E. A. Vosburgh, 2d; James Kugler, Jr., 3d.

SINGLE COMB—ANY OTHER COLOR LEGHORNS.—Cock—Flushing Poultry Yards, 1st. Hen—Flushing Poultry Yards,

A \$1000 ORPINGTON

was defeated at the great Eastern Show in New York, Nov. 13-17, 1905, by one of our **May hatched S. C. Black Orpington Cockerels**. We were also awarded on our **American Bred Orpingtons** in hot competition, including many imported birds, the following prizes: 1st, 2d S. C. Buff Pens, 1st R. C. Buff Cock, 1st Hen, any other variety, 1st Pullet, any other variety, 1st, 2d S. C. Black Pens, 1st S. C. White Cock, 1st Cockerel, any other variety, 1st Pen, any other variety. **Also handsome Tea Service on display.** We have a large number of **Black Cockerels** by same sires as the above winners, and about same ages, for sale. Most of them weigh 9-10 lbs.; all grand in shape, size and color.

Buff Orpington Breeding

has been reduced to a science by us until we are now able to produce the choicest cockerels and pullets from the some matings. **The first prizes** on Pens at Hagerstown, Newark, our Prize Pen at Madison Square, 1st and 2d Pens at the Great Eastern this year, and at Trenton, Hackensack and Herald Square last year were the results of these matings. **Buff Cockerels** of this fine strain, grand shape, free from white, clean shanks and great bone, now ready to ship.

The same standard of breeding is applied to our White and Jubilee Orpingtons. We have the best of all varieties; they win for us and will win for you. Write us for prices. Fine illustrated catalogue sent upon request.

White & Goodacre, Breeders & Exporters Watchung, N. J.

VISIT OUR EXHIBIT AT MADISON SQUARE

1st. Cockerel—Flushing Poultry Yards, 1st. Pullet—Thomas T. Davey, 1st.

ROSE COMB BROWN LEGHORNS—Dr. Paul Kyle, 1st, 2d.
BLACK MINORCAS—Klee Bros., 1st; Greystone Poultry Farm, 2d.
RHODE ISLAND REDS—Robert Seaman, 1st, 2d; DeGraff Poultry Farm, 3d.
HOUDANS—D. P. Shove, 1st.
FAVEROLLES—Wisecres Poultry Farm, 1st.

NOTES OF THE SHOW.

Probably the display of fowls that attracted the most attention was the Orpingtons exhibited by White & Goodacre and Wm. Cook & Son, both of whom had very large exhibits. Dr. M. S. Sherwood, Pocantico Hills, N. Y., also had a fine exhibit of Buff and Black Orpingtons and won some of the ribbons.

The Greystone Poultry Farm, Yonkers, N. Y., had a fine exhibit of Black Minorcas and White Plymouth Rocks, and won their share of the ribbons.

Monmouth Poultry Farms, Freneau, N. J., had a good exhibit of S. C. White Leghorns and won a number of the blue ribbons.

Willmount Farm, Mamaroneck, N. Y., exhibited White Wyandottes and carried off some of the ribbons. Mr. Brown, who is manager of this farm, is one of those whole-souled, jolly-good fellows, with whom it is a pleasure to get acquainted.

The Aspetong Farm Poultry Yards, Newburg, N. Y., won some of the cream on their White Wyandottes. Mr. J. J. Anthony, who is manager of these yards, certainly knows how to produce the good ones.

The competition in the White Wyandotte class was very hot, but Horace Havemeyer, Stamford, Conn., certainly did his share of the winning, and this is as it should be, for he had some fine specimens on exhibition.

Elm Poultry Yards, Hartford, Conn., made a fine record on their White Leghorns, Barred Rocks, White Wyandottes, White Rocks, Black Minorcas, etc., winning many of the blue ribbons and a number of specials. These yards have been established since 1888, and since that time have always won a good share of the prizes wherever exhibited.

Frank D. Ham, Livingston, N. Y., the Barred Rock man, had a good exhibit of this variety, and won a number of prizes, including 1st and 2d hen, 1st, 4th and 5th pullet, and a number of other prizes. Mr. Ham has been breeding Barred Rocks for a number of years, and his stock shows that he knows "how."

C. P. Nettleton, Shelton, Conn., was there with his Light Brahmas, and as usual carried away some of the ribbons.

Klee Bros., Blauvelt, N. Y., exhibited some very fine Light Brahmas and got

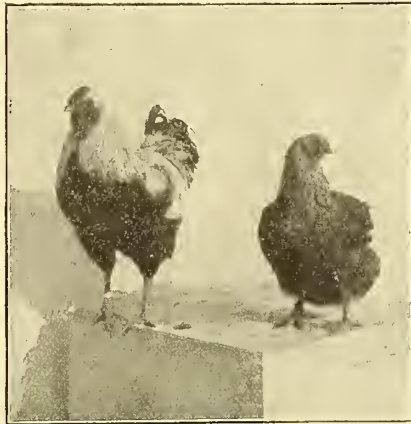

a number of the blue ribbons.

Andrew Riddell, Shushan, N. Y., had a fine string of birds on exhibition, and won some of the cream.

Chas. A. Kahle, Red Bank, N. J., had some fine Buff Rocks, White Rocks and Black Minorcas, and made some good winnings in all these varieties.

Dr. Paul Kyle, Flushing, L. I., N. Y., whose smiling countenance was everywhere in evidence, had a very large exhibit, including S. C. Buff Orpingtons, Rose Comb Brown Leghorns, and a large display of pigeons, and had the satisfaction of winning a number of the blue ribbons.

The Worthington Poultry Yards, Mr. Fred Harries, manager, Elmsford, N.

First cock and hen, Detroit, 1905, owned by H. H. & E. M. Coburn, Memphis, Mich.

Y., exhibited S. C. Buff Orpingtons, Cornish Indian Games and White Holland Turkeys, and had the pleasure of winning four firsts on Turkeys and several prizes on their Indian Games. The Indian Games exhibited by them were as fine specimens as we had ever seen anywhere, and gave evidence of the great care that had been taken in their breeding. Their White Holland Turkeys were also grand specimens of this variety and deserved all the honors that was bestowed upon them.

Flushing Poultry Yards, Flushing, N. Y., had a good exhibit of Buff Wyandottes, and took away some of the prizes on this variety.

Deepdale Farm, Great Neck, L. I., N. Y., won a number of prizes on their S. C. White Leghorns.

John Swayck, Englewood, N. J., won some of the cream on his Barred Rocks.

John F. Hollis, No. Abington, Mass., won on his White Wyandottes, which were very good specimens of this variety.

THE F. W. NIESMAN CO.

Box 40, Freeport, Ill.

Mrs. E. Turner, Baltimore, Md., had a very choice pen of White Wyandottes on which she won fourth.

The DeGraff Poultry Farm, Amsterdam, N. Y., exhibited their Rhode Island Reds, and carried home some of the ribbons in this class.

Rufus Y. Coolidge & Son, Hudson, Mass., exhibited some fine Buff Wyandottes and won 2d cock, 1st hen and several other prizes.

Geo. M. Bell, Voorheesville, N. Y., made two entries on Buff Wyandottes, and won two first prizes. This speaks highly of the quality of Mr. Bell's stock.

L. B. Custer, Parker Ford, Pa., had a nice exhibit of Silver Penciled Wyandottes, and won a number of first prizes.

E. L. Tallman, Nyack, N. Y., won 1st and 2d hen on Silver Penciled Wyandottes. These were good specimens of this variety.

L. H. Davis, Port Jefferson, N. Y., exhibited some fine specimens of Columbian Wyandottes and won two firsts and two seconds, and first on exhibition pen.

M. S. Gooding, Brockford, N. Y., had some good specimens of the Columbian Wyandottes, and carried off some of the honors in this class.

Henry Cundell, Englewood, N. J., entered some fine specimens of Black Langshans and won all the prizes offered on this variety.

A. E. Parks, Plainfield, N. J., exhibited some choice Single Comb Buff Orpingtons and carried home some of the ribbons.

Miss Gretchen Wiedemann, Thomaston, L. I., N. Y., exhibited two very fine specimens of Black Orpington hens and

won first. She also won fifth on pen of this variety.

H. V. Bump, Cambridge, N. Y., had a good display of Single Comb White Leghorns and won a number of ribbons on them.

The Single Comb Brown Leghorns were few in numbers, but good in quality, and the ribbons were won by Elmer Holburk, Greenwich, N. Y.; H. M. Moyer, Bechtelsville, Pa.; Hubbard & Williams, New Haven, Conn., and Edward G. Noonan, Marietta, Pa.

W. M. Anderson, Oak Summit, N. Y., had some good specimens of Rose Comb Brown Leghorns and carried away some of the good prizes.

Glenbreckin Farm, Noroton, Conn., exhibited some fine specimens of Golden Polish and White Crested Black Polish, and won all the prizes offered on these two varieties.

Earl Wilson, Salem, N. Y., entered his Silver Spangled Hamburgs and won two first prizes.

Robert Seaman, Jericho, L. I., N. Y., had some nice specimens of R. I. Reds, and won his share of the ribbons.

Louis Anderson, Bloomsburg, N. J., exhibited Rose Comb Rhode Island Reds and won three first prizes.

Wiseacres Poultry Farm, Croton-on-Hudson, N. Y., M. J. Whitty, manager, exhibited some very choice specimens of Salmon Faverolles and won 1st cock, 1st hen, first cockerel, 1st pullet and 1st pen. Mr. Whitty is an enthusiastic fancier of this variety and certainly knows how to produce the good ones.

The Excelsior Wire and Poultry Supply Co., New York City, had a large exhibit of poultry supplies and appliances and Prairie State Incubators.

The Universal Regulator Co., Plainville, Conn., did a thriving business with their new electric regulator for incubators. This regulator is so designed that it is absolutely impossible for the heat to go above 103 degrees, and we believe it will prove of great value to any one who is using an incubator.

The show was kept in a perfectly sanitary and healthful condition by the use of Perfection Disinfecting Sawdust and Carman's Phenyle, manufactured by Perfection Chemical Co., Flushing, L. I., N. Y.

Chas. A. Cyphers, Buffalo, N. Y., had a large exhibit of his Model Incubators and Brooders.

Donovan & Burns, New York City, dealers in feed for poultry, had an exhibit of samples of grains they handle.

The Cyphers Incubator Co., Buffalo, N. Y., made a large exhibit of their incubators and brooders and poultry supplies of all kinds. This exhibit was under the direct management of Mr. Dillingham, their New York manager.

Chesebro-Whitman Co., New York City, exhibited their portable poultry houses. These houses are made of a good quality of lumber and are easily taken apart and moved to new ground, and they are so arranged that they are easily cleaned and made an ideal house for a small flock of fowls.

Dr. M. S. Sherwood, Pocantico Hills, N. Y., was demonstrating his new egg tester, which, without doubt, is a vast improvement over the majority of testers in use at the present time.

Owing to the fact that we were unable to stay until the end of the show, we did not have the time to make as detailed a report as we should like to have done, and if we have slighted anyone we have not done so intentionally.

POULTRY SUPPLIES

of every description. Prairie State, Empire State and Star Incubators and Brooders Drinking Fountains, Wire Netting, Spray Pumps, White Washing Machines Powder and Liquid Lice Killers, Roup and Cholera Cures, Condition Powders, Egg Foods, Oyster Shells, Beef Scraps, Dog Cakes and Medicines, and everything necessary for breeding poultry and pet stock. HOW TO MAKE POULTRY PAY

You may have a copy free. It's full of valuable information for poultry people.

Keeping your birds healthy, strong and productive is the secret of poultry profits; proper feeding and the right remedies are the two most important factors of success.

Neglected fowls never pay. Birds well cared for produce profit. If your birds are not profitable, you can make them pay handsomely by using proper foods and remedies such as we prepare specifically for poultry.

The strengthening, healing properties of Harding's foods and remedies condition poultry for the highest degree of productiveness. **HARDING'S UNCLE SAM EGG PRODUCER** is the winter egg food. 2lb. package 25c prepaid.

HARDING'S ROUP CURE—given in water—never fails—50c and \$1.00, prepaid.

HARDING'S POSITIVE CHOLERA CURE—for Cholera, Diphtheria, Gapes, Diarrhea, etc.—1 lb. 25c; by mail, 40c.

HARDING'S SCALY LEG CURE. The only sure remedy for scaly legs, sores and flesh wounds; an excellent polish for the show room—5 oz. can 25c; by mail, 35c.

HARDING'S ANTISEPTIC LICE OINTMENT for head lice on children, turkeys and little chicks—10c and 25c prepaid.

We guarantee these preparations to prepare you for any emergency; their frequent use keeps fowls in pink of condition. Remember our book, "How to Make Poultry Pay" is sent free—write today. Agents wanted. Terms furnished on application.

Box 333, Binghamton, N. Y.

SILVER PLYMOUTH ROCKS.

Although this variety is getting into the hands of quite a number of poultry fanciers, one can find practically no mention of them in the columns of the poultry press.

It being known that I enthusiastically favor them, I have been asked to write an article on them.

In this I have been backward principally because I have never in any sense been a claimant to being an originator of this variety. However, there seem to be four such claimants in the field, and, believing what these men could write of more value and of more authority, I have preferred to stand aside.

Also, I have never been in sympathy with those misguided individuals who will rush into print, claiming all sorts of laudatory things for a new breed they may have taken up.

Such claims by such people always does the new breed or variety more harm than good.

It will be noticed I speak of them as Silver Plymouth Rocks rather than as Silver Penciled Plymouth Rocks.

This is an important distinction for two reasons. A distinction I hope all future breeders of the variety will strongly uphold.

Silver Penciled Plymouth Rocks flavors strongly of single combed Silver Penciled Wyandottes. The true Silver Plymouth Rocks are *not* single combed Silver Penciled Wyandottes, and to insist upon this fact most strongly at this point in their history is of the utmost importance, because most fanciers believe, or will tell you, that they are nothing more than single combed Wyandottes. This has been fostered by one or two writers saying it in print, and using the word Penciled, when speaking of these Rocks will tend toward clinching this impression.

Silver Penciled Plymouth Rocks is cumbersome and unnecessary as a variety designation.

Silver Plymouth Rocks will entirely answer and will be a far more descriptive and pleasing derivation than for instance the title, Dark Brahmas given birds of the parent coloring. Dark Plymouth Rocks would hardly be descriptive or pleasing, but on the score of brevity and popularity would outrank Silver Penciled Plymouth Rocks.

And if it cannot be silver Plymouth Rocks, then it should be, to be consistent, Dark Plymouth Rocks.

A variety believed or reported generally to be nothing more than a single combed Wyandotte sport evidently suffers in reputation, because of the old by-gone period when a single combed White Wyandotte, for instance, could be shown as a White Plymouth Rock and win. This was hard lines for breeders of the true Rocks. Made them loudly protest, as was proper, and made the whole business.

Now there are strong claimants in the field that Silver Plymouth Rocks are *not* single combed Silver Penciled Wyandotte sports, and I believe their claims to be good and valid ones, because principally I have never been able to find any single combed Silver Penciled Wyandottes that could hold a candle to the real Silver Plymouth Rocks in size or shape. Nor in breeding what I speak of as the true Plymouth Rocks, have I been able to note any sign of reversion to the Wyandottes.

And of equal importance, too, these Silver Plymouth Rocks of entirely dif-

ferent origin will easily rank with the Silver Penciled Wyandottes in quality and perfectness of plumage; in hackles of female even seeming to excel over them. While unlike, the single combed Wyandottes, they will attain to immense size and be most rapid and profitable growers and layers of as finely large typical Rock eggs as is possible to find. (Being less nervous and especially being stouter in shank and better in color of same.) I have had cocks reach twelve pounds, and that would fill a leg band intended for Asiatics.

When I say I can not find any single combed Silver Penciled Wyandottes that will hold a candle to real Silver Rocks I say so after personally speaking or writing to practically all the best breeders of this variety and having had birds from most of them sent to me. In the fall of 1904 I paid out some \$12.00 in express charges in returning such single combed sports.

And in the spring of 1905, discarding all such I had, rather than use them as breeders.

Not that I would not use such a sport if I find one equal in size, shape and color to what I already have, for I could safely and easily do this, pedigreeing and keeping a record, as I do, of every chick I hatch.

The Silver Plymouth Rocks that I like the best came to me, claiming to be bred as follows: Roughly stated, a Dark Brahma Silver Grey Dorking Mottled Java cross.

Such a combination promises well as to size and value as a market fowl and from other economic points of view. Females from this line reach the fine quality of plumage and coloring found in the best of the other lines. Males and females, especially the former, run to the extreme in size and in chicks are remarkable for their vigor and vitality. Their marked activity and rapid growth and their fine laying qualities are of equal value.

This line shows the Dorking blood in the purity of color in the males and occasionally very strongly in the shape of a growing chick.

This year I had three chicks hatch with five toes, but were not allowed to live.

There was also one which when killed at a weight of six pounds had developed white legs and dressed with a white skin. This cockerel was in this respect either a freak, or a Dorking, as the rule is for cockerels to come with the finest yellow legs. The three chicks and this cockerel all owned as their dam a hen that in head strongly favored the Dorking family, but had fairly good yellow legs rather short.

The Mottled Java cross I have in use way been able to note, except perhaps save in an occasional pullet of poor markings, with beautiful yellow shanks.

It is a matter of regret with me that I can not, on account of lack of room, try these crosses in the original. Not that I would expect to gain much thereby, as the Silver Plymouth Rocks as they bred for me this season, run to a most remarkable degree of evenness of quality.

Another line, perhaps the oldest and best known and one on which certainly a good deal of the most intelligent sort of breeding has been put, is that of single comb Silver Penciled Wyandotte sports, strongly fortified by yearly infusions of Dark Brahma blood or recent Dark

Brahma crosses, being in some instances 13-16 Dark Brahmas.

If these are as claimed, and I have every reason to believe so, this cross gives a large, fine looking bird, especially in females, with a proneness to stubs on shanks. The 1st prize pullet at St. Louis World's Fair so much admired was of this line. This female was easily the equal in penciling of any penciled bird shown and was superb in color.

Ever since I have had Silver Plymouth Rocks I have looked at them and studied them from the double mating standpoint or plan, and the chicks this year certainly turned out as even in quality, shape, size and color as is found in Barred Plymouth Rocks bred the same way. In so far as shape and size is concerned, they could outrank many lots of Barred Plymouth Rock chicks.

Any opposition to them as a new breed, merely because they are a new breed, is silly and uncalled for.

The time was with Barred Plymouth Rocks, when every variety we have was a new thing, and probably met with opposition, perhaps worse. If Silver Plymouth Rocks are a good thing, and I believe they are, they are bound to win out and make themselves a place.

They have besides what I have hinted at in this article wonderful beauty of color and marking. Not merely a repetition of the old white, buff, black, etc., but of a color and marking comparatively rare in poultrydom.

Morning Sun - Iowa

THE QUINCY INCUBATOR

is the most improved hot air incubator. It's the one with the **Hydro Safety Lamp**, which mixes just the right amount of moisture with the air. That is the only natural and correct principle. The "Quincy" is entirely automatic in regulation, heating and ventilation. This incubator has a sheet steel lined egg chamber—cannot dry out, warp, check or crack, and does not extract the natural moisture from the eggs, as does wood lining. We use the best thermometers made. Made in three sizes—60, 120 and 240 eggs. They will hatch a healthy chick from every fertile egg. The "Quincy" Brooders are just as carefully made, and are just as efficient as the incubators. Our illustrated catalog tells the whole story. Will mail you a copy if you write for it.

QUINCY INCUBATOR CO.,

Dept. C, QUINCY, ILLINOIS

Annual Notice to Members of the American Poultry Association.

Office of the Secretary-Treasurer, Beaver, Pa., Nov. 15, 1905.

Fellow Members: According to the decision of the Executive Committee in June last, the next annual meeting of our association will be held in Cincinnati, Ohio, in connection with the exhibition of the Cincinnati Poultry and Pet Stock association. The opening session will be on January 18th, at an hour and place to be announced later.

Petitions for the admission of the following new varieties to the Standard of Perfection have been received:

Rose Comb Rhode Island Reds.
Rose Comb Buff Orpingtons.
Single Comb Black Orpingtons.
Rose Comb Black Orpingtons.
Single Comb White Orpingtons.
Rose Comb White Orpingtons.
Single Comb Diamond Jubilee Orpingtons.
Rose Comb Diamond Jubilee Orpingtons.

dard the words, "Females without ticking, superior in other points, shall be given the awards over those that have ticking," or the words substituted therefor by the Revision Committee, the object being to have the standard worded so as not to allow the alternative of no "ticking."

(4) Eliminate from the said standard the words, "Other things being equal, the specimen having the richest under-color shall receive the award," or the words substituted therefor by the Revision Committee.

(5) Amend the said standard so as to make the weight requirements 7 pounds for hen and 6 pounds for pullet, instead of 6½ and 5 pounds, respectively.

AMENDMENTS TO CONSTITUTION AND BY-LAWS.

A life member of the association, who wishes his name withheld for the present, proposes the changes in the Con-

bred poultry and the general advancement of the poultry interests of America, especially by the holding of poultry shows institutes and conventions by the Association or its branch organizations and Association members as hereinafter set forth.

The Association shall also publish a poultry paper monthly, semi-monthly or weekly under the name and terms to be determined by the Executive Committee. This paper shall be the official organ of the Association, and published therein shall be sufficient notice to all persons on all matters respecting which no other form of notice is prescribed in the Constitution or By-Laws of this Association. The subscription price shall be reasonable, not exceeding two dollars per annum, and no advertising matter shall ever appear on the front page of the cover.

(2) Transpose Section 2, of Article II to Article VIII (Article VII of this proposed revision) making it Section 4 of that Article, and changing it to read as follows:

Section 4. No changes shall be made

A group of youngsters on the Emma B. Poultry Farm, Gurnee, Ill.

Single Comb Spangled Orpingtons.
Rose Comb Spangled Orpingtons.
Rose Comb Buff Leghorns.

CHANGE IN STANDARD.

F. D. Baerman gave notice prior to June 30, 1905, of the following proposed change in the Standard of Rhode Island Reds:

(1) In the standard for Rhode Island Reds eliminate the following words: "Other things being equal, the specimen having the deepest and richest red, salmon or buff under-color shall receive the award," or words conveying this requirement which may have been substituted by the Revision Committee.

(2) Amend the said standard so as to require the under-color to be "reddish buff," eliminating the alternative of "reddish salmon."

(3) Eliminate from the said stan-

stitution and By-Laws given below. He wishes it understood that he is not of the office holding or office seeking class; is not even a member of the Executive Committee. The Secretary-Treasurer takes the liberty of saying that this member is not a resident of New England, New York, Pennsylvania, Ohio, or of any State further west than Ohio. The following are the proposed amendments:

(1) In place of Section 1, Article II, substitute the following:

ARTICLE II.

Section 1. The objects of this association shall be the publication, revision and improvement of the American Standard of Perfection, this book being the exclusive property of the association; consideration of all questions of a national character pertaining to Standard

in any part of the Standard of Perfection unless written notice, specifying word for word the proposed changes, shall have been filed before July 1st preceding the annual meeting at which the changes are to be made, with the Secretary-Treasurer, who, in announcing the next annual meeting shall duly notify the members of the proposed change or changes.

(3) Change Article III as follows:

(a) Section 1. Change the first "of" to "in."

(b) Change the paragraph of this Article on "Annual Membership" to read as follows:

Second. ANNUAL. This membership fee shall be two dollars (\$2.00), payable with the application. Each annual member shall also pay one dollar (\$1.00) as annual dues, at least ten days in

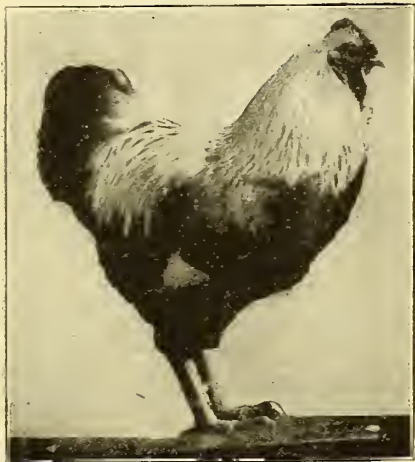

advance of each annual meeting of the association, subsequent to the meeting at which he becomes a member.

(c) Change the paragraph on "County Representative" to read as follows: Third, COUNTY BRANCH. Where there are five (5) or more life members of this Association, residents of the same county, they may, and it is their duty to, organize a County Branch of the American Poultry Association, with proper offices and authority, for the holding of meetings, institutes and conventions and exercising a general supervision, under the direction of this Association, over the fancy poultry interests of the county.

This County Branch may annually hold a county poultry show in connection with the county convention, all under the auspices and authority of the general Association. This exhibition shall be judged in accordance with the Standard of Perfection and the rules of the American Poultry Association.

The County Branch shall turn over to the general Association ten per cent of the net receipts of the poultry show thus held and promoted.

A County Branch Association shall be entitled to one representative to the meetings of the American Poultry Association.

First cock Detroit. Score 94½. Bred and owned by H. H. & E. M. Coburn, Memphis, Mich.

ciation for the first ten (10) life members of the American Poultry Association enrolled as active members in such County Branch, and for each five life members of the Association thereafter enrolled in like manner.

The names and credentials of said representatives, and the names and addresses of all members of the County Branch who are life members of the American Poultry Association, must reach the Secretary-Treasurer of the general Association at least ten (10) days in advance of the date of each annual meeting of the American Poultry Association.

(d) In place of the paragraph on "State Representative" substitute the following:

Fourth, STATE BRANCH. When five or more County Branches are organized in any State they may, and it is their duty to, unite in and organize a State Branch Association, with proper officers and authority for holding State conventions and institutes for the consideration of matters of interest to the fanciers of the State.

The State Branch may annually hold

a State poultry show in connection with its convention, this show to be held under the auspices and by the authority of the general Association. Such show shall be judged by the Standard of Perfection and under the rules of the American Poultry Association.

The State Branch shall turn over to the American Poultry Association ten per cent of the net proceeds of the State poultry show thus held and promoted.

A State Branch shall be entitled to one representative at the American Poultry Association meetings for each two County Branches actually and properly represented at the State convention; the name and credentials of said representatives, and the names of the County Branches represented at the State convention, to reach the Secretary-Treasurer of the general Association at least ten (10) days in advance of the date of each annual meeting of the American Poultry Association.

(e) In place of the paragraph on "Club Representative" substitute the following:

Fifth, CLUB MEMBERSHIP. Any Specialty Club, organized in the interest of any breed or variety of poultry, may become a life member of the American Poultry Association upon the payment of a fee of twenty-five dollars at the time of applying for membership. The club thus becoming a member shall be entitled to one representative at the meetings of the American Poultry Association.

The club thus becoming a member shall also be entitled to one additional representative at the meetings of the American Poultry Association for each five of its members who are life members of the American Poultry Association.

The names and credentials of the representatives, and the names and addresses of all life members of the American Poultry Association who are members of such Specialty Club, must reach the Secretary-Treasurer of the American Poultry Association at least ten (10) days in advance of each annual meeting

of the American Poultry Association at which rights of membership are to be exercised.

(f) In the place of the paragraph on "Association Representative" substitute the following:

Sixth, ASSOCIATION MEMBERSHIP. Any poultry association, or society other than the County and State Branches above specified, organized for the purpose of giving annual exhibitions, whose rules show that it holds its exhibitions under the regulations of the American Poultry Association, may become a life member of the American Poultry Association by paying a fee of twenty-five dollars at the time of applying for membership. The association or society thus becoming a member shall be entitled to one representative at the meetings of the American Poultry Association, and an additional representative for each thousand birds over and above two thousand which shall be properly entered and exhibited in accordance with the rules of this Association.

The names and credentials of the representative must reach the Secretary-Treasurer at least ten days before each annual meeting of the American Poultry Association at which his rights are to be exercised.

The American Poultry Association shall not allow any such association or society to judge its shows by the Standard of Perfection until such association or society shall have become a member of this Association, as prescribed in the preceding paragraph, nor unless it shall annually contract to pay the Association one per cent of its net receipts.

Each representative specified in this Article is entitled to all the privileges of membership in this Association while duly authorized to act as one of the representatives specified herein.

(g) In place of Section 2, substitute the following:

Section 2. All applications for membership, of whatever class, must be made in writing, must bear the endorsement of two members of the Executive Com-

HOW TO BUILD AN INCUBATOR and BROODER

It's easy with our COMPLETE ILLUSTRATED PLANS. A ten-year-old boy can readily follow them with success. They show you every stage of construction, step by step, in nearly 100 half tone illustrations. They contain complete specifications for building the famous PERLESS INCUBATORS and BROODERS. Every feature is clearly pictured and thoroughly explained, making it possible for ANYONE to build an incubator and brooder possessing exclusive features and advantages which are unequalled by any machine on the market. We supply ALL PARTS not possible for you to make, such as lamp, regulator, tank, heater, legs, door, etc., at a very small cost and furnish the

100 Egg Peerless Incubator
built from our Plans and Fixtures

Equipped with Acme Compound Regulator and Automatic Lamp. Note combined damper and flame Regulation above

Plans and our new Illustrated Catalog FREE

which contains our full line of Improved Incubator and Brooder Fixtures and Supplies, including our New

Acme Automatic Lamp and Compound Regulator

with combined damper and flame regulator, which SAVES ONE-HALF THE OIL. No danger from fire; can't overheat; no trimming of wick; regulator controls both flame and damper. Can be attached to any make of incubator or brooder. If your machine is not working right our catalog will tell you how to remedy the trouble.

Salt Lake City, Utah, July 23, '05.

H. M. Sheer Co., Quincy, Ill.

I have built twelve 200-size Peerless incubators from your fixtures and plans. Six I sold to poultry raisers here, and six I run myself. These machines gave good results, never hatched below eighty per cent and as high as 92 per cent. I have up to date 2,136 Pekin ducks and 840 chicks. I don't think I lost over 5 per cent of ducks and chickens hatched. These incubators take very little care. The regulator, when once set, holds the 103 mark from beginning to end, and the lamp is a big oil and time saver. I have orders for 4 Peerless incubators now and I want to build two or three more for myself.

Plans and catalog are free. Address **H. M. SHEER CO., Dept. G, Quincy, Ill.**

mittee and must receive a vote of two-thirds of the Executive Committee present and constituting a quorum.

No application shall be approved until the membership fee is paid. Should the application fail of approval, the fee shall be returned.

The Executive Committee shall report to the General Assembly all favorable votes on applications, as specified in the Order of Business, and thereupon a two-thirds vote of the General Assembly, by written ballot, shall admit the applicant to membership. Unless three members object, all the applicants favorably reported at one time may be voted for on one ballot, or the Secretary may be instructed, by motion, to cast the ballot.

This Section shall not be construed to apply to Club or Association memberships. Clubs and Associations become members, IPSO FACTO, upon filing with the Secretary-Treasurer the proper proofs of right to membership under this Article, and receiving from the Secretary-Treasurer, who must give it, a cer-

to all privileges of the Association, and shall have the right to speak upon all questions under consideration, the same as life members, but shall have no vote in the meetings of the Association excepting in the election of officers, and he shall not vote at the meeting at which he shall have been elected a member.

Annual members may become life members of the Association at any time by paying to the Secretary-Treasurer the sum of eight dollars (\$8.00), exclusive of any amount previously paid for dues as annual members.

In no case can a vote be cast on a membership for which the dues have not been fully paid at least ten days before the annual meeting.

(1) Eliminate Section 5.

(4) In place of Section 1, Article IV, substitute the following:

Section 1. The officers of this Association shall consist of a President, a Vice President for each ten life members in any one State, a Secretary-Treasurer, and Executive Committee, an Association

retired from office shall be chairman of this Board.

(5) In place of Section 2, substitute the following:

Section 2. The President, Vice President and Secretary-Treasurer shall be elected by ballot at the regular annual meeting, to hold office for one year, or until their successors are elected. Vacancies shall be filled by a majority vote of the Executive Committee present and constituting a quorum.

No person shall hold the office of President more than two terms in succession.

The term of office of the President and Secretary-Treasurer shall begin on the first day of July after their election and shall expire the last day of the following June.

(6) In place of Article V, substitute the following:

ARTICLE V.

Section 1. An annual convention of the State Branches of the American Poultry Association shall be held at the time and place of the annual meeting of the Association.

Section 2. A poultry show shall be held in connection with the annual convention of the State Branches, and under its direct supervision and management, the Standard of Perfection to govern in the judging, and the rules of the American Poultry Association to govern its proceedings.

One-half the net proceeds of the exhibition shall be turned over to the American Poultry Association.

Section 3. The annual meeting of the Association shall be held at such time and place as shall be determined by a majority vote of the executive Committee, present at the annual meeting of the Association, and constituting a quorum.

The Executive Committee shall announce at each annual meeting the time and place of the next annual meeting.

The annual meeting shall not be adjourned to some other place, excepting for an urgent and specified reason, and upon a majority vote of the Executive Committee.

(7) Change Article VI to read as follows:

ARTICLE VI.

The Executive Committee shall have power to expel or suspend any member for cause, by a vote of three-fourths of the members present and constituting a quorum, but no member shall be expelled or suspended without formal charges, with specifications, and opportunity to be heard. Any member thus expelled or suspended shall have the right to appeal to the Association, which, in a regular meeting, shall be the final judge in the case.

(8) Transfer Article VII and make it Article VIII.

After the words "President and Secretary-Treasurer" in this Article, insert the words, "ninety days before the annual meeting."

(9) Transfer Article VIII and make it Article VII, changing it to read as follows:

ARTICLE VII.

Section 1. Before any breed or variety can be admitted to the Standard it must comply with the following requirements, to wit:

It must be able to produce a satisfactory percentage of specimens reasonably true to the type and characteristics of the breed or variety as set out in the proposed Standard, and must have been exhibited, in two generations, both

Attend To Your Renewal.

Many thousand subscriptions to the AMERICAN POULTRY JOURNAL expire this month, and we would ask as a favor that the matter be attended to at the very earliest date possible. Sometimes our subscribers wait to be personally notified by mail of the date of expiration. With such heavy work as falls upon our subscription department at this time of the year, it is impossible for us to write each one, so we would thank our patrons to attend to their renewals promptly without waiting for any special notification.

Subscription offers will be seen on various pages of the Journal. Send in two subscriptions at 50c each and we give your own FREE.

We cut off at date of expiration. The date on the wrapper of your paper will show to what time you are paid. "Dec. 05," for instance, means that you are paid to December, 1905.

As the policy of the AMERICAN POULTRY JOURNAL is to have all subscriptions payable in advance, we would be pleased to hear from each one in good time, so that there may be no disappointment caused by being dropped from our list. Send your subscription AT ONCE.

American Poultry Journal Pub. Co.

325 Dearborn St., Chicago, Ill.

tificate that all conditions have been fulfilled.

Nor does this Section apply to the representatives specified in this Article, each of whom is entitled to all privileges and rights upon filing proper credentials, showing that all requirements have been complied with, and receiving a like certificate.

(h) In place of Section 3, substitute the following:

Section 3. Each life member shall be entitled to one vote in the meetings of the Association on all matters under consideration.

Each State, County, Club and Association representative shall, in his capacity as representative, in like manner be entitled to two votes at all meetings of the Association, notwithstanding the fact that if he shall be a member of the Association he may also, in his personal capacity, be entitled to an additional vote.

Each annual member shall be entitled

League Committee, and Advisory Board, and a Finance and Auditing Committee.

The Finance and Auditing Committee shall consist of three, selected by the Executive Committee from its members.

The Executive Committee shall consist of the President, Secretary-Treasurer, Advisory Board and ten life members of the Association, to be chosen annually by a majority vote of the combined State, County, Club and Association representatives assembled at the annual meeting of the Association.

The Association League Committee shall consist of five members, all of whom shall be delegates from local organizations, under the sixth paragraph of Section 1, Article III, and shall be chosen by the delegates themselves in attendance at the annual meetings.

The Advisory Board shall consist of the ex-Presidents of the Association in good and regular standing as active life members. The President who has last

male and female, at three at least of the exhibitions where the American Poultry Association shall have held its annual meetings.

Both male and female specimens of at least two generations must be on exhibition at the time when the breed or variety shall come up for admission to the Standard, in order that the members of the Association may inspect the same, to determine upon the propriety of admitting the breed or variety in accordance with the specifications of the application.

If the fowl is presented for admission as a new breed it must possess such new breed characteristics as to give it a very distinct character of its own, and if it is presented for admission as a new variety it must truly possess all the type characteristics of the breed of which it is a variety.

Extraordinary care should be exercised to prevent multiplicity of varieties.

Section 2. A petition addressed to the American Poultry Association shall be presented. This petition shall contain a brief description of the breed or variety seeking admission, together with all known or ascertainable facts regarding its origin and breeding, and a prayer for its admission.

Affidavits of the breeder and of two or more persons familiar with the breeding of the fowl shall be presented, containing statements of the percentage of specimens breeding reasonably true to the type and characteristics of the breed or variety as described in the proposed Standard; the affidavits also to state that the breed or variety has been sufficiently perfected to entitle it to recognition as a Standard breed or variety, and that it will breed as true to its standard as most other breeds in the Standard of Perfection will breed to their standards.

The proposed standard for the breed or variety shall be presented at the same time with the petition, but may be amended by the petitioner or the Association before the admission of the breed or variety. This standard shall be read at the meeting at which it is proposed to admit the breed or variety.

Notice of the presence of such fowls at the exhibitions referred to shall, upon every occasion, be given the Secretary-Treasurer at the place of meeting, and the Secretary-Treasurer shall specify in the minutes whether the required exhibition of the birds has been made at that meeting.

At least ninety days prior to the meeting of the Association at which admission to the Standard is sought the papers required in the application shall be filed with the Secretary-Treasurer, who shall give to the members sixty days notice of the pendency of such application.

The applicant shall set out, at the meeting at which admission is sought, satisfactory evidence that all requirements in regard to exhibiting the birds at the former meetings of the Association have been complied with.

Section 3. If, upon consideration of all the evidence, the Association is satisfied that the fowl is worthy of recognition in the Standard of Perfection, that it has, in fact the qualities and characteristics set forth in the application, that all claims and specifications set up in the application are justified, and that all requirements for its admission have been complied with, a majority vote of the members present, and voting by written

ballot, shall admit the breed or variety to the Standard.

Section 4. No changes shall be made in any part of the Standard of Perfection unless written notices, specifying word for word the proposed changes, shall have been filed before July 1st preceding the annual meeting at which the changes are to be made, with the Secretary-Treasurer, who, in announcing the next annual meeting, shall duly notify the members of the proposed change or changes.

CHANGES IN THE BY-LAWS.

(10) In place of Section 1, of Article I, substitute the following:

Section 1. The President shall preside at all meetings of the Association. He shall appoint all special committees, unless otherwise ordered by the Association. He shall call extra meetings for specified lawful purposes at the request

FRED E. PILE, PRESIDENT CLEVELAND FANCIERS' CLUB.

We are pleased to present herewith the good face of Fred E. Pile, president of the Cleveland Fanciers' Club, Incorporated. Mr. Pile is one of the best men in the broad field of poultrydom. As a breeder and exhibitor he is well known. He is a worker all the time and is doing much to insure the success of the Cleveland show January 29 to February 3.

of a majority of the members of the Executive Committee. He shall also preside at the opening and closing of national conventions and institutes held under the authority of the Association.

When present, he shall preside at meetings of the Executive Committee.

(11) Add to Section 2, Article I, the following paragraph:

In the absence of the President from conventions and institutes, held under the auspices of the Association, those assemblages shall choose their presiding officers from members of the Association in attendance.

(12) Add to Article I the following:

Section 3. The proper expenses of the President in attending meetings, conventions and institutes, over which he may preside, and all expenses for postage, stationery, or other matters properly incidental to the office, shall be paid

from the funds of the Association.

(13) Instead of Article V, substitute the following:

ARTICLE V.

The salary of the Secretary-Treasurer shall not be less than six hundred dollars per year.

The amount of the Secretary-Treasurer's salary shall be determined by the Executive Committee, at the time of the annual meeting, subject to the above limitation.

He shall also, after July 1, 1906, be allowed not to exceed four hundred dollars per year for stenographer's fees or salary, the amount actually paid to stenographers to be included in the financial report of the Secretary-Treasurer. The Secretary-Treasurer is not precluded from conducting his private correspondence through this stenographer, if he faithfully conducts the correspondence of the Association, keeping copies of all letters.

The only other expenses allowed the Secretary-Treasurer will be for postage, freight and express charges in the business of the Association, and his actual expenses in attending meetings, national conventions or institutes of the Association.

Any other expenses must be approved by the Finance and Auditing Committee before they can be charged against the funds of the Association.

(14) Eliminate Section 1 of Article VII.

(15) In place of Section 2, of Article VII, substitute the following:

Section 1. The Advisory Board may, at any time, advise the Executive Committee on matters pertaining to the affairs of the Association, and, on application of the Executive Committee, shall do so.

The advisory Board shall also have general supervision of national poultry institutes, having power to delegate to its individual members, or to others, the direct management of such institutes.

The expenses of the Advisory Board, or its appointees, when actually engaged in the work of the Association at such institutes, are to be paid in such manner as may be prescribed by the general Association, perhaps by an appropriation from its share of the revenues of poultry shows held in connection with such institutes.

(16) In section 1, of Article VIII, for the word "seven," in line three, substitute the words "one-half."

(17) For the last sentence in said section, substitute the following:

The Executive Committee shall have complete supervision of the affairs of this Association, excepting such as properly come before the Advisory Board, and shall be its official organ on all occasions.

(18) To Section 2, of this article, add the following paragraph:

The Executive Committee may elect its own chairman for the conducting of business and the making of reports, nothing in Article I or Article VIII to be construed as interfering with this right.

(19) In Section 4, of Article VIII, eliminate the words "and have joined the Association League."

(20) Make "Article IX" read "Article X," and make clause 6, in the Order of Business, as follows:

Six. Report of Executive Committee on application for membership; election of members.

(21) The succeeding clauses will then

be numbered 7, 8, 9 and 10.

(22) Supply as Article IX the following:

ARTICLE IX.

The method of procedure as set forth in Fish's American Manual of Parliamentary Law, shall govern the proceedings of this Association, subject to special rules which may be properly adopted.

(23) And the following Articles:

ARTICLE XII.

Service in legal proceedings shall be made by leaving copies of all papers with the President and Secretary-Treasurer in regular and lawful manner at their respective home offices.

But when the poultry paper shall have been established, as provided in Article II of the Constitution, the home office of the Association, for all purposes, shall be the publication office of this paper.

ARTICLE XIII.

A branch association of the American Poultry Association shall be established with headquarters in San Francisco, in such manner, at such time and under such regulations as may be determined

by the Executive committee at an annual meeting of this Association, the said branch association to be composed of the State Branches of the States west of the Rocky mountains.

OTHER CHANGES PROPOSED.

Dr. B. J. Hill, Akron, Ohio, a life member of the Association, proposes the following changes.

Resolved, That Section 5, of Article III, be amended so as to read as follows:

Any Specialty Club, organized in the interest of any breed or variety of standard bred poultry, may become a member of the American Poultry Association by the payment of a fee of ten dollars (\$10.00) at the time of applying for membership. This shall entitle the club to one representative to the meetings of the American Poultry Association. Such Specialty Club shall also be entitled to one additional representative of the meetings of the American Poultry Association for each ten of its members who are members of the American Poultry Association, by paying an additional fee of one dollar (\$1.00) for each such additional representative. These fees, to-

gether with the names and credentials of the representatives, and the names and addresses of all the American Poultry Association, who are members of the said Specialty Club, must be filed with the Secretary-Treasurer of the American Poultry Association prior to its regular or special meeting.

Resolved, That Section 6, of Article III, shall be amended to read as follows:

Section 6. ASSOCIATION REPRESENTATIVE. Any Poultry Association or Society, organized for the purpose of giving annual exhibitions, and whose rules show that it holds such exhibitions under the show rules of the American Poultry Association, may become a member of the American Poultry Association by paying a membership fee of ten dollars (\$10.00) at the time of applying for membership. This shall entitle the Association to one representative at the meetings of the American Poultry Association. Said representative's name and credentials shall be filed with the Secretary-Treasurer of the American Poultry Association previous to its annual or special meeting.

Resolved, That Article VII, of the Constitution of the American Poultry Association, be amended to read as follows:

ARTICLE VIII.

Before any breed or variety can be admitted to the Standard it must comply with the following requirements, to wit:

It must be able to produce more than fifty per cent (50 per cent) true to type and characteristics of the breed or variety. The breed must have been exhibited at least five, and the variety must have been exhibited at least three of the exhibitions where, and when, the American Poultry Association shall hold its annual meetings. At the meeting where, and when, the application for admission is to be considered, there must be exhibited at least twenty (20) specimens, consisting of males and females of three or more generations, and the second generation exhibited must be the offspring of the second generation exhibited.

If the fowl applies for admission to the Standard as a new breed, it must have characteristics distinct from those breeds already admitted to the Standard. If it applies for admission to the Standard as a new variety it must possess the breed characteristics of the breed of which it is variety, and must conform to the existing standard description of shape of the breed of which it is a variety.

A petition addressed to the American Poultry Association shall be presented, containing a description of the breed or variety, its origin and breeding and a proposed standard. Affidavits of the breeder and two or more persons familiar with its breeding shall be presented stating the percentage of specimens, breeding true to type. All papers shall be filed with the Secretary of the American Poultry Association at least sixty days prior to the annual meetings of the Association, and the Secretary shall give notice to the members of the pendency of the petition and shall include in this notice a copy of the proposed standard.

If upon the examination of the affidavits and on inspection of the fowls the members of the Association are satisfied that the fowls have reached a thoroughbred condition, and that all requirements for admission have been complied with, a majority vote of the mem-

PONY and COMPLETE OUTFIT FREE

ANY BOY or GIRL, 18 years old or less, can learn how they can have my private pet PONY "Bob" with his elegant rubber-tired PONY CART and finely Custom-made HARNESS delivered at their door without a cent of cost. I will pay all transportation charges myself. I do not want a single cent of your money. "BOB" with his PONY CART and HARNESS, just as I shall deliver him, is easily worth \$300.00. I will send you full particulars showing you that there are absolutely no blanks. If you wish the PONY and complete OUTFIT delivered to you, all charges prepaid, address a postal, asking for full particulars how to secure him, to CHARLES E. ELLIS, Pony Dept., 24 North William St., New York City, N. Y.

bers present, and voting, shall admit the breed or variety to the Standard.

A CALLED MEETING OF THE ASSOCIATION. While at Hagerstown, Md., in attendance upon the late adjourned meeting of the Association, the President and Secretary-Treasurer agreed in asking a half-dozen members of the Executive Committee to unite in signing a petition for a called meeting, to be held at San Francisco, California, on Thursday, November 30, 1905. The call specified that this meeting is for the purpose of promoting a further acquaintance with our Association among the fanciers of the Pacific Coast; the actual business of this meeting is limited to the receiving of new members. The President and Secretary-Treasurer guaranteed that there would be no bills presented by them for expenses at this called meeting, as they are to be in attendance upon the California State Poultry Exhibition at that time.

The signers to the above petition are J. H. Drevenstedt, George O. Brown, Charles McClave, Eugene Sites, W. C. Denny and August D. Arnold.

In compliance with the above petition the President of the Association has in-

Let there be a prompt payment of one or more years of dues by all annual members. Better still would it be, if many of these annual members should remit \$8 and be transferred to the life membership list.

NOTICE TO ASSOCIATION AND CLUB MEMBERSHIP.

Attention is called to Article III, Section 1 of the Constitution, which provides that all representatives of clubs and associations must file their credentials with the Secretary-Treasurer at least ten days in advance of the annual meeting. Do not postpone this matter until after January 8th; that will be too late.

THE SALE OF THE NEW STANDARD.

In June, 1905, the Secretary-Treasurer was pronounced rash when he predicted that by July 1, 1906 the sales of our new Standard would reach 10,000 copies. At the time of closing this report more than 8,800 copies have been ordered and paid for, so that it seems quite possible that the 10,000 mark will be reached six months sooner than predicted.

THE OLD BRIDGE NOTE PAID.

We are glad to report that a full and amicable settlement of the Bridge note, held by Mtschke Bros., Columbus, Ohio, has been effected. They agreed to a cash settlement of about 62 per cent of the amount of their claim, and the Finance Committee quickly approved this and the vexatious affair is now ancient history.

ERRORS IN THE NEW STANDARD.

Attention has been called by many to an evident error on page 25, under the head of "Sweepstakes and Special Prizes." In the fifth line of this paragraph change "latter" to "former," so as to handicap solid colored rather than partly colored specimens.

GEO. D. HOLDEN,
President.

T. E. ORR,
Secretary-Treasurer.

Mr. F. D. Baerman, the genial fancier who originated the storm concerning the American Reds, has served notice in due shape that he will propose some changes in the Standard's description of the Rhode Island Reds. He wants "ticking" in the females, and desires reddish buff in preference to reddish salmon undercolor. He also desires to see the clause eliminated which gives the best undercolor preference, other qualities being equal. The weights of hens he wishes changed from six and one-half to seven, and of pullets from five points to six. I imagine there will be some serious objections to this.

That hurler of the editorial javelin, Brer Hewes, gives a piece of his mind and a portion of his inkpot to telling the management of the Lewis and Clark Exposition that he was at their hen show, even if they did try to hide it from him behind a railroad dump. The coasters declare it was a great show for a' that, Theo.

CO-OPERATIVE DISHWASHING.

Why not have a regularly equipped dishery, we might call it—in each neighborhood, with coöperative dishwashing for the families subscribing to it? asks Cara Reese in *Good Housekeeping*. This would mean the erection of a small building, or the lease of a room in some building that supplied "power," or if rigid economy were necessary, simply the experimental "borrow" of a kitchen, with sinks for the pots and pans and the installation of a "hand" dishwashing machine, with, of course, a continuous supply of hot water.

DON'T KILL THE LAYING HEN.

Thousands of hens are killed annually that are among the best layers in the flock, but the owner has heretofore had no way of knowing whether they were laying or not, and has had to trust to luck in selecting hens for slaughter. Realizing the value of knowing how to distinguish the laying hen from the non-laying hen, T. F. Potter & Co., of Downer's Grove, Ill., have given the matter thorough study, and have made a discovery that will be worth thousands of dollars annually to the poultrymen of the country. They have discovered the secret and can tell in one second whether a hen is laying or not, or whether she will lay in the future. Read their large display ad. and then send for their free circular, giving full details. Address T. F. Potter & Co., Box A, Downer's Grove, Ill.

E. A. Parks, the Partridge Wyandotte breeder, has moved from Syracuse, N. Y., to Jamesville, N. Y., where he has a 100-acre farm. He will build several new poultry houses in the spring, one of which will be 150 feet long and 14 feet wide. This farm is pleasantly located on the old Genesee Turnpike, two miles east of Jamesville, where he has express facilities. He is also three miles from Manlius and seven miles from Syracuse. This gives him access to all the express companies. He can spare some of his breeders at the present time.

Advertisers seldom realize in how many ways their advertising gets before the public. One of Mr. Park's customers bought an order of eggs from him through an ad he saw in the AMERICAN POULTRY JOURNAL loaned to him by a friend. This customer, Mr. Wright, of Worcester, N. Y., in reporting to Mr. Parks the success that he had with the twenty Partridge Wyandotte eggs that were sent him, states that he secured fourteen good healthy chicks; the hen killing four or five in the nest, one disappearing after nearly full grown. Mr. Wright signs himself as a satisfied customer.

WHITE PLYMOUTH ROCKS

structed the Secretary-Treasurer to publish this call for a meeting to be held at the time and place above specified.

THE INCREASE OF OUR MEMBERSHIP.

At the St. Louis adjourned meeting there were added to our roll, thirty-three life members and twenty-four annual members.

At the Minneapolis annual meeting the additions were as follows: Life members, seven; annual members, thirty-one.

At the late Hagerstown adjourned meeting eleven life members were received; also twenty-six annual members.

In the past year twenty-two members, admitted as annuals, have been converted into life members.

NOTICE TO ANNUAL MEMBERS.

The "Proceedings" sent to all members during the summer of 1904, showed for what year all annual members had paid their dues. Many annual members are now two years in arrears and all such will be dropped from the roll unless their dues of one dollar per year are received by the Secretary-Treasurer by January 8, 1906.

See Article III, Section 4, of the Constitution.

KANSAS EXPERIMENT STATION EGG-LAYING CONTEST.

The egg-laying contest, arranged by the Kansas White Wyandotte Club and conducted by the Dairy and Animal Industry Department of the Kansas Experiment Station, was completed October 31. Each contesting pen consisted of a male and six females, and the competition lasted one year.

The hens have made a fair record, and the average yield will compare favorably with that of other authentic egg-laying contests. Better records would probably have been made had it not been for some unfavorable conditions which accompany the carrying on of such a contest, as, for instance, the transportation and frequent handling of the fowls, and the adaptation to strange rations and surroundings, all of which tend to diminish the egg yield. Beside these usual unfavorable conditions, the winter was the most severe ever known in the State. The pens in which it was necessary to house the contest fowls were of the curtain front type, and built for the accommodation of twenty-five fowls each. This house, with its ample ventilation, is perfectly satisfactory when filled with a sufficient number of birds per pen to maintain the heat, but with only the six hens prescribed by the rules of the contest the house was cold and the egg yield was reduced proportionally.

The methods of care and feeding followed were designed to bring out fair comparative results of the breeds and of individuals, rather than forced egg yields. A variety of grain was fed the year round. This was fed in straw in the winter and in the yards in the summer. An evening mash was fed the entire year, composed at first of equal parts of bran, chop, meat-meal, shorts and linseed-meal and later of bran, chop and meat-meal only. In the winter mangels and alfalfa leaves and in the summer green alfalfa and rape, were used for bulky food. Oyster shell and grit were supplied. No fresh meat, hot mashes, ground bone, red pepper, patent foods or medicines were fed. The intention was to use only such foods as produced normal results and can be secured at any place or in any section.

CONTESTING PENS.

The following is a list of the contesting pens, with notes upon their work:

Single Comb White Leghorns, owned by the Kansas Agricultural College.—This pen, together with the Buff Wyandottes owned by Mr. Wheeler, are not in the contest as arranged by the Kansas White Wyandotte Club, and should not be considered in the honors of that contest. There being no prizes offered, these results are published with those of the regular contest. Although the College birds were moved from another part of the farm to the laying quarter, it must be admitted that they had some advantage over the birds from a distance, especially in the substitution of other pullets for those lost.

Rose Comb White Leghorns, owned by Mrs. Jennie E. Warren, Cottonwood Falls, Kan.—This pen wins first of the regular contest birds. It is worthy of note that their egg yield held up better in the winter than the Single Comb Leghorns. Both Single and Rose Comb Leghorns suffered a loss of two birds each. The Single Comb birds died suddenly during laying periods, while the Rose Comb pullets died of what is known as "going light."

American Reds, owned by Dr. J. Martin, of Wichita, Kan.—These were the best matured pullets at the beginning of the contest, and show the best winter egg record. They were, in fact, hatched so early that they molted during January. There was no sickness or loss in this pen.

White Wyandottes, owned by Beecher & Beecher, Belleville, Kan.—These pullets maintained good health throughout, except No. B1B. This fowl laid poorly shaped eggs, and during October developed a protrusion of the egg-laying organs, which resulted in death of the hen. No. 4C11 of this group is exceptional for steady laying, and also for the earliest and most rapid molt.

Buff Wyandottes, owned by Mr. G. C. Wheeler, Manhattan, Kan.—This pen showed uniformly good layers except 459, whose unusually poor work brings the pen from a high to a low rank. The best of health prevailed and no loss occurred.

Barred Plymouth Rocks, owned by Mrs. J. W. Jones, Abilene, Kan.—This pen consisted of hens, while all others entered were pullets. This was due to an unfortunate misunderstanding, and is manifestly unfair to the breed, for hens are generally considered to be poorer winter layers than pullets. The hens were inclined to over-fatness and were heavy eaters. No. 45 of this pen has a most excellent record for a matured hen. These hens maintained excellent health and suffered no loss.

Light Brahmas, owned by Mr. F. A. Brown, Onaga, Kan.—Brahmas are slow in developing, and these were not developed when placed in the contest and did not lay well except for a short time in the spring. They were in good health, one bird being lost by accident shortly before the close of the contest.

The following tables give the complete results of the contest. The prices taken are on the local Manhattan market, and for sake of comparison, feed prices are given per cwt. All weights given are in pounds or decimal fractions of pounds. The individual loss or gain is figured by assuming that each hen ate one-seventh of the food consumed by the pen. The molting periods are given by the month in which they occurred. The number of broody periods separated by a period of laying is recorded. The laying time lost in breaking up broodiness ranged from ten days upward. The percent of fertility is recorded only for hens from which ten or more eggs were incubated. The records of the weights, of eggs were taken during the summer

months, and are incomplete because a few hens were not then laying. The total weights recorded are only approximations, as the weights of a hen's eggs are not uniform throughout the season. The feed records include all grain and mash fed and the costs and profits figured are intended to serve for the comparison of the pens, rather than as a basis for figuring the profits of commercial egg-production.

BELLEVILLE, ILL.

The St. Clair County Poultry Association will hold their annual show December 13-17, 1905. V. S. Campbell, judge. D. O. Thomas, secretary.

OKLAHOMA CITY, OKLA.

On account of conflicting dates the dates of the State Poultry Show have been changed from January 1-6 to January 29-February 3, 1906. T. E. Shaw, assistant secretary, 2509 Western avenue, Oklahoma City, Okla.

SAND CREEK, OKLA.

The first annual show of the Sand Creek Poultry Association will be held December 6-8, 1905. M. S. Fite, judge. C. L. Bickerdike, secretary.

SHELBY, OHIO.

The Shelby Poultry and Pet Stock Association will hold their annual show February 5-11, 1906. Phil. Feil, judge. W. O. Smith, secretary.

DUNLAP, IOWA.

The Boyer Valley Poultry Association will hold their first annual show December 26-29, 1905. F. H. Shellaburger, judge. Send for premium list to the secretary, George J. Gleason, Box 176, Dunlap, Iowa.

STREATOR, ILL.

The Streator Poultry Club will hold their annual show December 20-23. E. R. Schurman, secretary.

PROFITABLE POULTRY

A free 64-page book, finely illustrated, that tells how to make money raising poultry. Others are doing it; why not you? This book gives full information on breeding, feeding, rearing and hatching. Illustrates and tells why Berry's "Biddy" incubators and brooders hatch and raise the largest per cent of chicks—the kind to buy. Contains cuts of our fine pure-bred poultry with prices of birds and eggs for hatching.

THE SETTING HEN.

As this is the season of the year when many hens of the farmer and fancier want to set, I thought it a good time to tell the readers how my hens are set. Some may think it is rather late in the year but if chicks have plenty of shade and the other necessities they may be raised with considerable profit even at this time. Free range will also help in bringing up these late chicks to maturity. An orchard is an ideal place. I will consider in my article seven distinct topics which I know if followed will bring the best results.

First—A suitable place should be found for the hen. By this I mean a place where wind and rain will not enter. Above all things do not let the setting hen be near or with the laying flock; if she is, poor results are the consequence. Special caution should be taken against rats which prevail in nearly all neighborhoods. If rats have a chance to get in the nest they will eat the eggs. Skunks should be guarded against in the same way. I have had both the rats and the skunks spoil several eggs at one time for me, since then I have been more careful.

Second—Get a square box, in the bottom of which place some slightly moistened earth. On top of this put some hay. A little chaff on top of the hay puts the nest in better shape to receive the eggs. When this has been done take some good brand of lice powder (I use Lamberts with good success) and thoroughly sprinkle the hay and chaff with it, for if we wish to raise strong, healthy chicks we must have them started free from mites. Now put some decoy eggs in the nest, china eggs are good, and are what I use, but stale eggs may be used. Five or six are plenty.

Third—The nest is now ready and the decoy eggs are in it. We will now get the hen. The best time is at dusk. Dust her thoroughly with lice powder. Grease her head with lard or ointment; also under her wings. Now place her gently on the nest. Have her head facing the nest as you place her on, or else she may break the eggs. Do not cover her up with anything; now walk quickly and quietly away.

Fourth—The next night if she is still on the nest and is setting good take her off and remove the decoy eggs. Now place the good eggs under her. About this time of the year from thirteen to seventeen eggs may be put under a hen, depending upon the size of the eggs and the hens.

Fifth—Of course a hen in setting must have something to eat. I have a trough full of whole corn before her always from which she can help herself whenever she wishes, a dish full of grit (which is very essential), and fresh water every morning. This is all the feed that is necessary. The above is what I use and what I have found to be the best for setting hens.

Sixth—A dust bath is not absolutely necessary but it is a good thing to have. Use a shallow box filled with road dust or ashes. The hen likes the road dust the better.

Seventh—Every morning as the poultryman visits his setting hens to water them he should see that all is well. If any eggs are broken or soiled wash them off in lukewarm water; if the nest is soiled replace it with new nesting material.

If the reader follows the rules which

I have given above, it will not be the hen's fault if the eggs do not hatch well. It will be in the fertility of the eggs or in the vigor of the parent stock. I have found by experience that these are the best methods for setting the hens and no one will regret using them.

EDWIN H. HAYES.

Buffalo, N. Y.

SUMMER CLEANLINESS AND HOW IT AFFECTS THE YOUNG STOCK.

Perfect cleanliness is of the highest importance in the poultry yards and houses during the entire year but is especially necessary in the sultry summer months, when every detail should be carefully attended to, which may be of any possible benefit to the growth and development of the young stock. Fowls which have the very best of food and care in other respects will not thrive when confined in unclean and ill ventilated houses and pens. Cleanliness is highly necessary in the rearing of young chicks, no matter whether they are intended for exhibition stock, for breeders, or for the market.

By cleanliness is not meant the use of a large quantity of disinfectants which may give the appearance of cleanliness, although these are undoubtedly good to use in connection with the care of the poultry quarters. Cleanliness is of such great account in the summer that in many cases it may mean the saving of the life of a chick, as well as its health and growth, for cleanliness is the foe of vermin, and vermin is the cause of a majority of the poultry losses and diseases.

The houses for the young stock should be dry and well ventilated and the chicks should be kept from crowding and taught to go on the roosts as soon as possible so that there will be no danger of deformed breastbones caused by overcrowding. The brood coops and brooders should receive much of the poultryman's attention during the hot season and the little chicks should have clean dry straw on the floors of their coops and also plenty of fresh air and shade.

Lime is one of the best things to use in the houses, either in the form of white-wash or sprinkled about the floor as a powder. Carbolic acid is also a good disinfectant and kerosene should be used in the fight against lice and mites. The chicks need to be dusted with insect powder and their dusting places sprinkled with it. The yards should be dug up often and disinfected with lime and carbolic acid, so that the ground will not become old and full of disease germs.

A good house for the young chicks, and one which is easy to keep clean, may be made from an organ box, about 3½ feet wide, 4 feet high, and 4 feet long. Half of one side may, by the use of hinges, be made to swing out as a hood, and the opening covered with wire fencing, so as to give an abundance of ventilation on hot summer nights. The roof is made slanting and a small door may be cut in one end for the chicks, while a larger one may be placed in the side. Fine dry sand is good to spread on the floors of these houses, which may be made of earth or boards.

WILK H. WORKS.

Evay, Ind.

FOR THE HOUSEWIFE.

Ever since our colonial ancestors instituted Thanksgiving Day, it has been a day of rejoicing, and the good old-fashioned dinner plays the all-important part therein. A detailed and an interesting account of a Thanksgiving dinner, as it will be served by the young housewife who has followed the story of "The Making of a Housewife in *The Delinquent*", is given by Isabel Gordon Curtis in the November number. "Thanksgiving Day Novelties" illustrate many seasonable dishes, from the traditional pumpkin pie to a choicely arranged harvest centerpiece. Other articles on "Nut Novelties" and "Maple Dainties" can be made to advantage at this season of the year, and will add a novelty to the family menu.

Mrs. F. A. Hargrave, of Richmond, Kan., commences advertising in *AMERICAN POULTRY JOURNAL* this month. She has done little with her poultry for the past three years, but with returning health she expects to carry on the business larger than ever. She breeds Mammoth Bronze Turkeys and Barred Plymouth Rocks, and has a nice lot of stock on hand, including some fine large boned and bodied Toms, some show birds and a nice lot of Barred Rocks, these being good breeding birds. Topeka, Kan., and Kansas City have been her chief show-rooms, winning whenever she exhibited. She has a 37-pound, 18-months-old, 96-point yearling Tom which heads one of the yards and which has carried off two premiums. On her Barred Plymouth Rocks she recently won 1st pen and 2nd cockerel on six birds entered.

A NEW POULTRY BOOK.

Especially Written and Designed for the Beginners—Sent on Approval.

The book treats at length on the great profits in poultry culture, citing many cases where splendid incomes have been made from this fascinating business. It is a well established fact that there is big money in poultry culture. There are thousands of men and women who are earning princely incomes from it, while there are many more thousands who are making a snug little income every year conducting it as a side issue. To make from \$100 to \$1,000 clear profit every year, just in the spare moments, is no small matter with most people. And yet there are thousands who are doing this very thing raising poultry, and this same thing can easily be accomplished by anybody who will conduct it in an intelligent manner. It is just for this latter class that this book has been designed and by following its simple instructions success will be sure and the profits large.

SENT ON APPROVAL.

We want every beginner to read his book and we are willing to send it free on ten days' approval to every man, woman or boy interested who will take the trouble to write to us for it. In order to assist our readers to get this book on approval we print the following coupon, and advise our novice friends to fill it out, cut off, and send it today: Congress Park Poultry Yards, Congress Park, Ill.

Enclosed find 4c in stamps for which please send me on approval, your new book, "*Successful Poultry Culture for Pleasure and Profit*." If I want the book I agree to send you 50c for it. If I don't want it, I agree to return it to you within 10 days.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 18 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

The greatest success results from concentrating all efforts upon one line.

Three-fourths of the farmers waste a third of their feed given to hogs because they do not understand the best methods.

The American Swineherd teaches you how to be successful.

How to secure the greatest profits.

How to feed, to double the growth and gain over usual methods.

How to keep your hogs healthy, as only healthy ones are profitable.

How to get 18 pounds of pork out of a bushel of corn, and 20 pounds out of a bushel of wheat, fed to hogs.

Prof. Kennedy of the Iowa Agricultural College says: "Your paper is a leader on feeding."

One man writes: "A single instructive lesson in the Handbook on Hog Hygiene saved me \$50 in feeding a bunch of 40 hogs 60 days over the ordinary way of feeding. It is the best investment I ever made."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' snbs, rption to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition "The Pig Feeders' Manual," worth a \$1 itself.

This equips you for a successful hog business.

AMERICAN SWINEHERD

Como Bldg., Chicago, Ill.

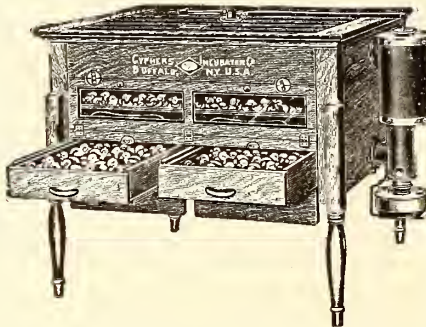

1906 CYPHERS COMPANY INCUBATORS.

After Two Years of Experimenting and the Most Elaborate and Thorough Tests Ever Made These New Machines Are Placed on Sale with 18 Distinct Points of Improvement. Five New Patents Pending.

Readers who had come to believe that in the Standard Cyphers Incubators as manufactured in recent years the limit of excellence had been reached—and that takes in the largest part of the poultry raising world—will be surprised at the Cyphers Company's latest announcement.

We were not, and we believe poultry raisers in general were not, looking for any startling announcements from the Cyphers Company this season, because by a sort of common consent the Cyphers Incubator had come to be regarded not only as "the standard" among incubators, but as embodying every possible requirement in the best form to secure excellent hatching results. The announcement, therefore, cannot be other than startling, that the 1906 Pattern Standard Cyphers Incubator embodies no less than eighteen distinct and valuable improvements upon the Cyphers as manufactured and sold in 1905. And yet the jury of International awards at the late Louisiana Purchase Exposition, in awarding to the Cyphers the gold medal and highest honors, called it, in their judgment, "a perfect incubator."

It seems that the Cyphers Company for two years has been working quietly on these new features. They did not underrate the excellence of their machine, but they believed that, good as it was, it could be im-

proved in certain particulars. They set about working out these improvements. Having accomplished all this to their own satisfaction, they did not at once offer the machines to the public. Wise conservatism forbade them to do this. They decided to make no announcement whatever until the seal of unquestioned approval had been set upon the improved machines by the leading poultry raisers of this country and Canada. How this was secured is told in an interesting way in the November advertisements of the Cyphers Incubator Company. Not until near the expiration of the second year, and not until all their proofs were perfected, was any hint whatever given to the public of what was going on. The 1906 machine, embodying the 18 distinct points of improvement, on which five separate patents are pending, is now announced.

This seems to us a matter of such importance, and the improvements on the Cyphers for the coming year pertain so evidently to the essentials of producing the most and the strongest chicks from a given number of eggs, that we reproduce here for our readers' attention the entire eighteen points of improvement. We give them in the words of the manufacturers, with their own brief explanation of the direct advantages of each:

1. Increased cubic capacity of hatching chamber, giving a greater volume of air and supplying more oxygen to the developing chick embryo.

2. Drop or hinged bottom to all Standard machines (Nos. 0, 1, 2 and 3) which, when let down, exposes the entire lower felt diaphragm, thus securing greater elasticity of ventilation, thereby adapting these machines to a far wider latitude in range of temperature.

3. Self-elevating nursery drawers (in the Nos. 2 and 3 Standard machines) for the reception of chicks and ducklings first to hatch and for use as carrying boxes for transporting the chicks and ducklings to the brooders or brooding house.

4. Staggered ventilating holes in drop bottom, which break up and diffuse the circulation of air to a beneficial extent.

5. Improved toggle lever thermostat, by the use of which one-fifth of a degree of change in temperature in the hatching chamber will positively control the heat.

6. Lock-nut at bottom of connecting rod that attaches the thermostat to the regulator arm, which renders it impossible for the nut to fall off or the connecting rod to work loose.

7. Double removable top diaphragms, so constructed that the thermostat (which is properly placed and adjusted at the factory) need not be removed nor interfered with at any time, for any purpose.

8. Fine texture fabric used for upper diaphragm, which permits the heat to pass through more readily into the hatching chamber, resulting in a saving of 15 to 20 per cent of oil.

9. Sloping or "dished" egg-trays (in the No. 0 and No. 1 Standards and in the Farm Economy and Boy's Choice incubators), i. e., trays which slope to the center from all points of the tray, thus assisting to equalize the temperature on a level with the top surface of the eggs in these small sized machines. The "inclined" (sloping) trays are retained in the No. 2 and 3 Standards.

10. "Split" or double lower diaphragm, which can be removed, washed, aired, replaced and the space between the burlap and felt readily cleaned.

11. Removable wire screen frames which protect the interior of the Nos. 2 and 3 Standard incubators when the drop bottoms are let down and that can be taken out at will when it is desired to clean these large-sized, deep-bodied machines.

12. Ease of access through open bottoms of Nos. 2 and 3 Standard machines for purpose of cleaning after a hatch, or at end of hatching season.

13. Special top and side ventilators for drying off ducklings, which makes these machines combination hen-egg and duck-egg incubators, rendering unnecessary the purchase of "special duck" incubators.

14. Patented gravity chick guard, which automatically prevents the chicks or ducklings in the nursery drawers from being injured when the drawer covers are pushed into place and the drawers are withdrawn.

15. Adjustable safety lamp support, instantly attachable without the use of nails, screws, bolts or other fastenings.

16. Guide ring on lamp burner, which renders it impossible to misplace lamp.

17. Black enameled metal cap and metal band for heater, which protect the asbestos heater jacket and add greatly to the durability and appearance of heater.

18. Removable mica on heater, so that it can be taken out to be cleaned, or can be replaced if broken.

It will be seen that all these are essentials and not mere talking points. The jury of 225 leading poultry raisers of the United States and Canada so regarded them. The Cyphers Company showed its wisdom as well as its conservatism in having its improvements passed upon by such an array of impartial judges before offering the new machines to the public. What these people said is appearing in Cyphers Company advertisements. More proofs are given in the new Cyphers Catalogue, which contains six chapters on poultry raising for profit, the raising of broilers, roasters, capons and ducks; photographs of America's leading successful poultrymen and the world's largest poultry plants; also complete illustrated description of our full line of manufactures.

It is mailed free and is certainly a catalogue that every poultry raiser should have.

S. C. WHITE LEGHORNS—ALL FOR SALE.

I have been very fortunate in adding to my White Wyandottes a remarkable flock of S. C. White Leghorns, and they certainly are the breed that lays and pays. My birds are very large birds of the strain. I have not shown any of this variety at the shows, as the demand for my stock was very large, but all of my pens are mated up with noted birds, both for the highest exhibition and utility. If you buy 12 eggs or 1,000, you get them from my best pens—I have no poor pens on the farm. Five hundred pullets, 100 cockerels. Write for prices and particulars to the Emma B. Poultry Farm, Gurnee, Ill.

THE DELINEATOR FOR DECEMBER.

For color work, press work and general beauty and usefulness, the December Delineator is conspicuous among the Christmas magazines. Eight paintings by J. C. Leyendecker, illustrating and interpreting the Twenty-third Psalm, is the most extensive color feature of the number, but a painting by Alphonse Mucha, accompanying a poem, "The Mother of Bartimeus," by Theodosia Garrison, is fully as notable as an art work. The short fiction of the number comprises stories by Hamlin Garland, John Luther Long, Gilbert Parker, and Alice Brown. The opening chapters of a new serial—a woman's club story—"The President of Quex," are given; it is said to be in the nature of a reply to "The Evolution of a Club Woman," which created great interest in the magazine last year. There is also the continuation of "At Spinster Farm," articles on Brass and Copper Utensils in "The Collector's Manual" and the Child at Play in "The Rights of the Child." A series of illustrated papers under the title "Some Heroines of Shakspeare—by their Impersonators," also begins in this number with Eleanor Robson on Juliet. The pastimes for children are filled with the spirit of the season, and there is an abundance of matter of housewifely interest.

"LINCOLN THE LAWYER."

Frederick Trevor Hill, the author of "The Accomplice," "The Case and Exceptions" and other books, has just completed work on a series of articles to be called "Lincoln the Lawyer," which The Century will print, beginning in December. Notwithstanding the fact that Lincoln's practice as a lawyer extended over twenty-four years, his achievement as a statesman so transcended his legal accomplishment that his chief biographers have necessarily given but brief space to his experience as a lawyer. Mr. Hill's articles are largely based upon the examination of court records and other personal investigations in the old Eighth Illinois Circuit, over which Lincoln traveled. Mr. Hill has had the assistance of Robert T. Lincoln, Robert R. Hitt, Judge Lawrence Weldon and many members of the bar and officers of the Illinois Historical Society.

THANKSGIVING NUMBER OF AMERICAN BOY.

In getting out this specially attractive number to mark the beginning of its seventh year, the publishers of The American Boy are certainly to be congratulated. The artistic, vigorous cover-page picture has "Thanksgiving" written all over it, and the contents of the paper almost marks the limit of what boys enjoy and will all be found of unusual interest. There are eighty-five splendid illustrations. Subscription price, \$1 a year. The Sprague Publishing Co., Detroit, Mich.

THE OUTING MAGAZINE FOR DECEMBER.

At Christmas time one naturally looks for something out of the ordinary in magazine production. The illustrated magazines of America lead the world, and how near the top stands The Outing Magazine we will leave you to judge after you have looked over the December number. With its six full page color plates, it is the best and handsomest number ever issued. Every article is brilliant, full of the rugged flavor of outdoor life and intensely American.

The Christmas number of Scribner's Magazine contains fiction by a remarkable list of contributors, which includes Frances Hodgson Burnett, Richard Harding Davis, F. Hopkinson Smith, Mary R. S. Andrews, Ralph D. Paine and Nelson Lloyd. There is also one of Henry van Dyke's most imaginative poems entitled "The Swarming of the White Bees," which is full of melody and fancy. Artistically the number is made beautiful by a colored cover, and many illustrations reproduced in colors by F. C. Yohn, Henry McCarter, J. C. Leyendecker and George Wright. There is also a beautiful art article by Kenyon Cox on the paintings of Holbein, with many examples of his work.

SOUVENIR POSTALS.

Nothing in modern times seems to have taken such a firm hold of men, women and children as the craze for Souvenir Postals. It is more than a fad—it is here to stay. Germany is still leading the world in the number sent, but we Americans are not far behind. Quite a novel idea in Souvenir Postals is a set published by the Pratt Food Company, of Philadelphia. These are printed in two colors—ten different designs and have the words "Souvenir From" printed at one end, so that it can be filled in by anyone and it becomes a souvenir from them and from their home. Most of the dealers in Pratt's Foods and Veterinary Remedies have these for free distribution, or for a limited time a full set of ten will be sent to any address upon receipt of 10 cents sent to Advertising Department, Pratt Food Company, No. 130 Walnut street, Philadelphia, Pa.

Judge W. S. Russell visited my yards last week and scored a number of birds for me. He found quite a few Barred Rock cockerels that scored 93 and a number that went from 92 to 92½. He also picked out a number of later ones that he said would be in fine shape and of such quality as to do to show at New York and Chicago.

I have over 500 birds to dispose of and

am making a special offer on fine large breeding cockerels at from \$3 to \$5 and pullets from \$3 up. This is about half their actual value, but I must have the room.

Magon, Ill.

DR. O. P. BENNETT.

"That warm blanket"—"just like the hen"—and fresh, pure air is what does it. The "Mandy" Lee is easily the best yet, says E. B. Hall, of Racine, Wis. It's the contact heat brooder. Catalog free.—Geo. H. Lee Co., Omaha, Neb.

S. C. Rhode Island Reds, owned by the De Graff Poultry Farm, Amsterdam, N. Y., made the following record at the Great Eastern Poultry Show held at New York City: 1st and 3d on cock, 1st on hen, 1st, 3d and 4th on cockerels, 1st on pullet, 1st and 3d on pens, making a record to be proud of.

The Wheeler Homestead Poultry Yards, of Kanona, N. Y., is the only plant in the country using Black Minorcas for market eggs. They have about 300 pure bred hens and have shipped since January, 1905, 24,000 eggs to hotels in Buffalo. They have for sale 50 S. C. Black Minorca cockerels.

Floyd C. Tabor won 2d on Brown Leghorn cockerel at the Great Eastern Poultry Show held in New York City, Nov. 13-17, 1905. There was a good showing of Brown Leghorns at the show and for Mr. Tabor to win 2d cockerel speaks well of his ability as a breeder of Brown Leghorns. He still has a few choice specimens to spare and our readers should write him for prices.

W. A. McCall, Xenia, Ohio, is advertising Barred Plymouth Rocks in this issue. Mr. McCall knows how to produce the good ones and has won a large number of prizes on his birds. Those of our readers who are interested in this variety should write him for further information.

The York Honey & Bee Supply Company, 141 Ontario street, Chicago, Ill., H. M. Arnd, manager, has secured the western agency for the Cornell incubators and brooders. Their ad will be found elsewhere in this issue; look it up and write them for catalogue and any other information you desire.

H. P. Mason, Fayette, Mo., breeder of Buff Rock Nuggets, writes that he will not exhibit this season, and has nearly 300 choice birds for sale. Mr. Mason was the largest winner at the World's Fair in the Buff Rock class, and he also won the Buff Rock State cup.

A GOOD POULTRY HOUSE

is a necessity. Morgan's Sanitary Houses in size, style and price are the best and cheapest houses on the market. Built right, arranged right, sold right. New illustrated catalog. Address

Box 1 SANITARY PORTABLE HOUSE CO., Lemont, Illinois.

BE ON THE SAFE SIDE

HARDING'S SUCCESSFUL ROUP CURE furnishes sufficient medicine to save the entire flock. Placed in the drinking water, fowls take their own medicine. No waste—no loss. This is a guaranteed cure, or money refunded. Have either a 50c or \$1.00 box of **HARDING'S SUCCESSFUL ROUP CURE** constantly on hand. HARDING, BOX 333, BINGHAMTON, NEW YORK, U. S. A.**

There is no earthly use of having chicks die when a remedy is within the reach of all. A 50c box of **HARDING'S SUCCESSFUL ROUP CURE** constantly on hand.

CAXTON ENGRAVERS & PRINTERS
334 DEARBORN ST.
CHICAGO, ILL.

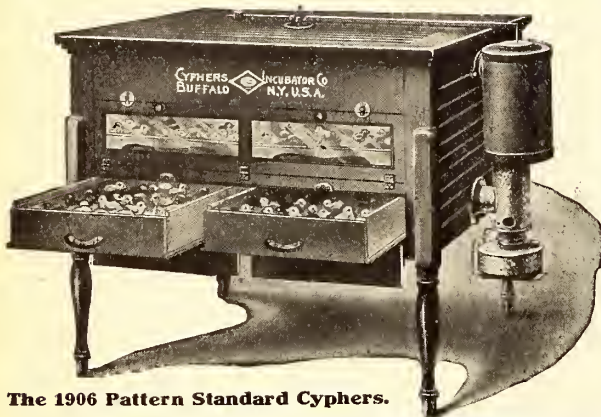

POULTRYMEN:—We are interested in your business, that is, if we can increase the sale of your stock. You want our help—How? By presenting good, clear arguments through well printed and illustrated circulars, booklets, cards, etc. We make the best poultry cards and half-tones, and do the best poultry printing on the market.

INCUBATOR PROGRESS!

FACTS TALK!

Anybody in this great free country can "CLAIM" almost anything, but **PROOF IS WHAT COUNTS.**

If it is true that the leading, successful poultrymen in the United States and Canada declare the **1906 PATTERN STANDARD CYPHERS INCUBATOR** to be "The Most Perfect Hatching Machine Ever Devised by Human Ingenuity and Skill," and **YOU** are thinking of buying an Incubator, it certainly will be to your interest to investigate our proofs.

The 1906 Pattern Standard Cyphers.

And That Is All We Ask.

We claim eighteen distinct and valuable improvements in the 1906-pattern Standard Cyphers Incubator—improvements that add greatly to the convenience of handling, economy of operation and **Certainty of Results.** Our guarantee is that the latest pattern, genuine Cyphers will hatch **larger percentages of bigger, stronger and more vigorous** chicks and ducklings than any other make of incubator on the market—*this, or your money back.*

1906 Standard Cyphers Incubators

Highly Endorsed by Men You Know.

CANADA. 95½ Per cent. Hatch.

London, Ont., June 26, 1905.
Cyphers Incubator Co., Buffalo, N. Y.
I received the No. 2, 220-egg capacity **1906-pattern Cyphers Incubator** in splendid condition and placed it in a nice, dry, well-ventilated cellar. * * * **The chicks all hatched at once**, practically speaking, and I had a little over 95½ per cent. of **healthy, strong chicks.** This is the best incubator I ever operated. I like all the improvements. They make the machine easier to operate and it takes less oil to run than the old Cyphers. * * * * *

I think your new machine is about perfect.

Yours truly,

John H. Hill

GEORGIA. 93 Per cent. Hatch.

Station A., Atlanta, Ga., June 26, 1905.
Cyphers Incubator Co., Buffalo, N. Y.
We put 220 eggs in one of your **1906-pattern Standard Cyphers Incubators**, tested out only ten as being infertile and out of the remainder (210 eggs) I hatched 196 as fine, healthy chicks as we ever saw. We ran the machine with the drop bottom down to the floor. This machine requires a good deal less oil to run than do the others. While we have been operating your incubators during the last five years and consider them first-class, we think the 1906-pattern is superior in every respect.

Respectfully yours,
Long View Poultry Farm, *F. D. Nixon*,
Manager.

IOWA. 96 Per cent. Hatch.

Iowa Falls, Iowa, June 27, 1905.
Cyphers Incubator Co., Buffalo, N. Y.
Find herewith report of my first trial with the **1906-pattern Cyphers Incubator.** One hundred and seventy-three Wyandotte chicks from one hundred and eighty eggs (96 per cent plus) is certainly a remarkable result. The trial given the machine was a very severe one. During incubation a hot wave swept over this section. This was followed by a decided drop in the temperature, accompanied by a cold wave.

The machine all this time did not vary a fraction of a degree. The chicks came very strong, every one firmly on its feet and as vigorous as could be. * * * I am delighted with the machine. It means more profit to breeders and fanciers. Consumed 20 per cent less oil during the hatch, which is a matter of consequence.

Yours respectfully,

Thos. F. Rigg

ALABAMA. 94, 98 Per cent. Hatches.

Birmingham, Ala., R. F. D., No. 5,
August 22, 1905.
Cyphers Incubator Co., Buffalo, N. Y.
In our opinion your **1906-pattern Standard Cyphers Incubator** is the most complete machine for hatching on the market and the most convenient to handle. The ventilation is excellent and the thermostat holds the heat to a fraction of a degree. We made three trial hatches with remarkable results, hatching 20 per cent more chicks than ever before (we have used Cyphers incubators for several years) and at one-third less expense for oil. The three hatches were brought off June 9th, July 1st, and August 19th respectively and gave us 175 chicks from 186 fertile eggs, 160 chicks from 185 fertile eggs and 192 chicks from 195 fertile eggs. Considering the time of the year, the foregoing results approach perfection and we look upon your 1906-pattern as a marvel. In our estimation the incubation was perfect. We are going to replace all our old-style machines as fast as possible with the 1906-pattern.

Very truly yours,

Francis Profit
John R. A.

CONNECTICUT. 100 Per cent. Hatch.

Bristol, Conn., June 15, 1905.
Cyphers Incubator Co., Buffalo, N. Y.
Am pleased to report very remarkable success with the **220-egg Standard Cyphers Incubator, 1906-pattern.** * * * When the machine was started we had in it both Partridge and White Cochins eggs and eggs from six different neighbors, making eight different kinds of eggs. * * * About ten days after starting the machine we had a very warm day and the temperature stood at 91 in the incubator.

Showing Construction of Nursery Drawers and Carrying Boxes Used in No. 2 and No. 3 Standard Cyphers Incubators, 1906 Pattern.

cellar, but at no time did the machine show any variation from 103. * * * All chicks were out on the 20th day and I am happy to say all the Cochins came out strong and clean and from the other 110 eggs we hatched 102 chicks, making a 95 per cent hatch of all eggs that were left in the machine after the second test; and I would add that the hatch from the eggs possible to hatch was 100 per cent, as we found that the chicks not hatched died in the shell at about the time of the second test. Your directions were followed to the letter. * * * Every chicken is yet alive and very strong, as all came out of the shells in the best of condition. Yours very truly,

Wm. M. Smithee

COLORADO. 6098 Feet Above Sea Level.

Colorado Springs, Colo., Aug. 13, 1905.
Cyphers Incubator Co., Buffalo, N. Y.
Last week (August 9) I took off a hatch of 236 chicks from my 1906-pattern Standard Cyphers, and I believe this to be the largest hatch ever taken at one time from any make of incubator in Colorado Springs. Three of my friends have _____ incubators. The best one of them could do was 67 chicks from 300 eggs, and the other two got six chicks each from 150 eggs. One of them at least is already a Cyphers convert and has written you. Another friend will sell his _____ in the spring and get a 1906 Cyphers.

Yours truly,

G. W. Veditz

INDIANA. 93 Per cent. Hatch.

Winamac, Ind., July 5, 1905.
Cyphers Incubator Co., Buffalo, N. Y.
Find enclosed report of my first hatch with the 1906 Standard Cyphers. I placed 240 White Wyandotte eggs in this machine and had 173 fertile left after the second test. On June 13th I took off 162 strong chicks, all of them hatching within twenty-four hours. To obtain a hatch of better than 93 per cent so late in the season is very satisfactory. I do not see wherein the machine could be improved. Very truly yours,

Chas. V. Keeler

LONG ISLAND, N. Y. Chicks and Ducklings.

Farmingdale, L. I., N. Y., July 10, 1905.
Cyphers Incubator Co., Buffalo, N. Y.
I take great pleasure in reporting my success with your 1906-pattern Standard Cyphers Incubator. I have waited until now, as I wanted to report on duck eggs as well as on hen eggs. I set 290 hen eggs, and on the first test

found 276 fertile, from which I took out 254 strong little chicks (92 per cent plus). Also from 200 duck eggs, of which 165 were fertile, it turned out 146 ducklings (88 per cent plus).

I cannot see how this machine could be improved upon, as I find that it will hatch practically every hatchable egg and the regulator is perfect. I ran the machine in my cellar, which is about 75 degrees, with the drop-bottom down to the floor. I cannot say too much in favor of this type of machine and believe it is the best incubator on the market.

Yours very truly,

Belle Fleuer Poultry Yards,

A. B. Sobothin

PENNSYLVANIA. 90½ & 95 Per cent. Hatches.

Moon Run, Pa., Oct. 3, 1905.
Cyphers Incubator Co., Buffalo, N. Y.
I take great pleasure in recommending your 1906-pattern Standard Cyphers Incubator. I ran it through two hatches and received a 90½ per cent hatch from the first trial and a 95 per cent hatch, second trial. The last hatch was run during very warm weather and I ran the entire hatch with the bottom dropped down to the floor and very little light turned on. The regulator worked perfectly and I think the nursery drawers a great improvement. This new machine is as near perfect as can be made and I believe you have the moisture question solved. Have used several different makes of incubators, but find the Cyphers the best in every particular. Yours truly,

C. F. Lorish

MICHIGAN. 92 & 91 Per cent. Hatches.

Dearborn, Mich., Sept. 21, 1905.
Cyphers Incubator Co., Buffalo, N. Y.
Your 220-egg Standard Cyphers incubator, 1906-pattern, arrived in good condition. Two hatches were run through it. The first hatch, from 176 fertile eggs I obtained 163 strong chicks (92 per cent plus); second hatch, from 194 fertile eggs I obtained 176 strong chicks, (91 per cent) with drop-bottom down to the floor. I have carefully examined the 1906-pattern Cyphers and cannot see where it can be improved. The lamp guide and new bracket are a marked improvement. The nursery drawers are very convenient and the regulator perfect. Yours very truly,

NOTE:—For reports from other States of the Union see complete catalogue.

Samuel D. Lopham

1906-Pattern Metal Cap Heater.

Please Bear in Mind

that these latest pattern GENUINE, PATENT-DIAPHRAGM, NON-MOISTURE

Cyphers incubators are not offered to you untried, untested—in the nature of an experiment. They have been operated with uniform success in all parts of the United States and Canada by the best known men in the poultry business, by foremost fanciers, by the proprietors and managers of the largest poultry plants in America and by professors at the Government experiment stations; by men whose names are synonymous with integrity and reliability; by men who would not make false reports or lend their names to purposes of deception, either directly or indirectly.

1906-Pattern Safety Lamp Support.

THE ABOVE CONDENSED REPORTS ARE BUT FAIR SAMPLES. Hundreds of others equally strong and convincing are published in our complete catalogue for 1906, entitled "Poultry Raising Made Easy and Profitable"—A FREE COPY of which will be mailed to anyone who will mention this paper and send us the names and addresses of two neighbors who are interested in poultry for profit.

THIS NEW CATALOGUE consists of 228 pages, 8 x 11 inches, and contains a large amount of valuable information, including six chapters on poultry raising for profit, the raising of broilers, roasters, capons and ducks for market, poultry keeping on the farm, photographs of America's leading successful poultrymen and illustrations of the largest poultry plants in the world; also a complete illustrated description of our full line of manufactures, embracing the following popular Cyphers Company specialties:

Mealed Alfalfa,	Laying Food,	Shipping Coops,	Feed Cookers,	Egg Preservative,	Egg Testers,
Short cut Alfalfa,	Forcing Food,	Egg Carriers,	Lice Powder,	Poultry Remedies,	Wire Fencing,
Shredded Alfalfa,	Scratching Food,	Food & Water Vess.,	Liquid Lice Paint,	Food Hoppers,	Roofing,
Chick Food,	Brood Coops,	Bone Cutters,	Fumigat'g Candles,	Grit & Shell Bxs.,	Sprayers, etc.
Developing Food,	Portable Houses,	Chicken Markers,	Disinfectants,	Leg Bands,

Shows, Associations and Clubs

Secretaries are requested to send us the latest news and announcements for this department.

SEDALIA, MO.

The Sedalia Poultry and Pet Stock Association will hold a Show December 26 to 30. L. P. Harris, Clay Center Neb., judge; L. H. Archias, secretary.

KINGSTON, N. Y.

The Ulster County Poultry, Pigeon and Pet Stock Association will hold its annual show December 13-15, Drevenstedt, judge; F. E. Miller, secretary; Rifton, N. Y.

BLOOMINGTON, ILL.

The Bloomington Poultry Association will hold their annual show, January 10-16, 1906, W. C. Pierce, judge; J. H. Rader, secretary.

LA CROSSE, WIS.

One of the best and largest shows to be held in Wisconsin this season will be that of the La Crosse Progressive Poultry Association to be held at La Crosse, Wis., January 22 to 27, 1906. Theodore Hewes will act as judge. The association has made great plans for this show and premiums well worth competing for

will be offered. Cash prizes on single birds and breeding pens will be paid, besides sweepstakes and special premiums. It will be the meeting place for fanciers from Western Wisconsin and Minnesota and a score card signed by Hewes at the La Crosse show will be of great value. Premium list may be had by addressing H. J. Hahn, secretary, La Crosse, Wis.

DELAVAN, WIS.

The management of the Southeastern Wisconsin Poultry Association take pleasure in announcing their Eight Annual Exhibition at Delavan, Wis., January 15-20, 1906. This is the oldest continuously organized poultry association in the State, and its increasing popularity is its best recommendation. Its aim is to please and the praises of scores of Wisconsin and Northern Illinois exhibitors attest the fact that it does please. The forthcoming show gives promise of even greater things than its predecessors. Among the many superior inducements to the fancier which this show offers may be mentioned the following: The exhibition is held in a well lighted hall in uniform exhibition coops furnished free by the Association. The

cash and special prizes are both liberal and promptly paid. The birds are well cared for and returned in good condition. Only the best judges are employed, and the last show, having outgrown the capacity of one judge, the directors have engaged the services of two competent men to pass upon the birds this year. Good things are in store for Delavan exhibitors and all poultrymen are invited to come and take advantage of them. The Premium List and Breeders' Directory will be ready for distribution about December 15. All inquiries regarding the show will be promptly answered by the secretary.

Delavan, Wis. W. E. PEPPER.

AMERICAN LEGHORN CLUB MEETING.

The twelfth annual meeting of the American Leghorn Club will be held at Madison Square Garden on Friday, January 5, 1906, at 4 p. m. during the New York show. Good attendance is desired. Some special business to transact.

W. W. BABCOCK,
Secretary and Treasurer, Bath, N. Y.

PAXTON, ILL.

The Ford County Poultry Association of Paxton, Ill. will hold their first annual show, January 25-27, 1906. W. H. Surface, secretary.

CORVALLIS, ORE.

The second annual show of the Corvallis Poultry Association will be held November 30th to December 2d, 1905, C. G. Hinds, judge. Gene M. Simpson, secretary, Corvallis, Ore.

Let Us Quote You a Price ON A GENUINE CHATHAM INCUBATOR.

WE have a surprise for you on the price of our 1906 Chatham Incubators, made in several sizes. This price is so low for the *genuine* Chatham Incubator that you cannot afford to think of buying an incubator before writing to us and getting our quotations.

We are the largest Incubator Manufacturers in all the world. Our two mammoth factories—which are larger than any other six incubator factories in the country put together—enable us to turn out six to seven hundred machines a day.

Buying high grade lumber in several million feet lots at a time—having the most modern machinery in every branch—enables us to turn in our own factory everything that goes into our machines—with the exception of the screws and nails—and having large capital to work with enables us to produce the highest grade machine on the American market at a very low price.

There is no question about Chatham Incubators. They have stood the test—and our liberal selling plan enables you to prove, for yourself, that the quality of our machines is the highest—or you can get your money back—because, we ship them on 84 days free trial, which enables you to take off four hatches with a Chatham—and if the machine at the end of the four hatches is not exactly as we claim it to be—and does not do what we claim it will do—you can send it back to us and you won't be a penny out.

We will pay all the freight charges both ways, and beyond that, we issue a 5-YEAR IRON-CLAD GUARANTEE which insures that the Chatham Incubator will not only hatch at the end of the first season, but at the end of the fifth season. Now our 84 days' free trial and five-year guarantee, together with the extremely low price we are quoting on these machines, makes the Chatham Incubator offer the most liberal one of the year.

We have a new catalogue just out—which tells about the Chatham perfect system of heating, ventilating and regulating. Chatham Incubators are built as solid as a rock and are made to stand rough usage—five years of it—and live out our guarantee. We have warehouses in 20 different cities throughout the country, from which we can ship machines, thus insuring prompt delivery.

Write us at once for our Free Catalogue, telling us what sized machine you are interested in, and we will send you the catalogue at once, together with special quotations on our full line. Address

THE MANSON CAMPBELL CO. Ltd., 52 Wesson Avenue, DETROIT, MICH.
Manufacturers of Chatham Fanning Mills, Corn Graders, Incubators and Brooders

**84 DAYS
FREE TRIAL**

NORWALK, OHIO.

The third annual show of the Fireland Poultry and Pet Stock Association will be held February, 14-19, Charles McClave, judge; T. P. Kellogg, secretary.

LYNN, MASS.

The ninth annual show of the Lynn Poultry Association will be held January 2-5, 1906, W. B. Atherton, J. Fred Watson, D. P. Shove, and C. G. Flinders, judges. Chas. E. Hunt, 157 Maple street, Lynn, Mass.

PAINESVILLE, OHIO.

The tenth annual exhibition of the Painesville Poultry and Pet Stock Association will be held at Painesville, Ohio, January 10-15, 1906.

As has always been the rule this will be a score card show, Mr. Thomas F. Rigg, one of the best known poultry experts, will be the judge.

This association has held nine successful shows, always paying their premiums in full, and the exhibitors as a rule have been well pleased and satisfied with their treatment.

Liberal cash premiums are given on all standard varieties. The premium list will be forwarded upon application.

The officers of the association are president, Dr. O. O. Hansch, Perry, O.; vice-president, Ira M. Crowther, Willoughby, O.; secretary and assistant, F. G. Johnson and A. H. Ayer, Painesville, O.; treasurer, F. C. Crosby; superintendent, H. M. Mosely; executive committee, H. M. Mosely, Tom Linton, Wurt M. Warner, J. H. Waters all of Painesville, O.

EDON, OHIO.

The first annual show of the Edon Fanciers Association will be held January 10-13, 1906. Eugene Sites, judge; John Gearhart, secretary.

MOHNSVILLE, PA.

The Wyomissing Poultry and Pigeon Association will hold their first exhibition in the large K. of P. Hall December 19-23, 1905. Chas. T. Cornman, of Carlisle, Pa., has been engaged as judge. And the officers and members of the as-

sociation are using every effort to make this show the largest and best ever given in this part of the state. Catalogues and premium list now ready, and can be had by addressing the secretary, Geo. W. Hatt, Mohns Store, Pa., who will also be pleased to answer any and all correspondences.

DAVENPORT, IOWA.

Davenport will hold the largest show in this state this season. Do not fail to send for premium list and see what a large list of cash and other special prizes we are offering in addition to our regular prizes. Premium list now ready. Address J. B. Voss, Secretary.

NEWARK, N. J.

The next Newark Poultry, Pigeon and Pet Stock Show is to be held in the Bamberger Auditorium, Newark, N. J. January 29, 30, 31, and February 1, 2 and 3, 1906.

Newark is one of the few first-class exhibitions. These words are a bit sweeping, but I mean all I say; for a show, in my humble opinion, cannot be "first-class unless it is powerful enough to demand a high entry fee—pay valuable regular class premiums—offer substantial cash or plate specials—employ a staff of judges of the highest standing—give good ribbons, badges and diplomas—issue an official marked catalogue—engage an outfit of light, uniform and attractive cages, command a good attendance—and after the curtain drops, disburse all its liabilities.

Newark has done all this and more too. She offers \$5 first and \$2 second in all poultry classes—about \$300 in cash and cups. The judges, badges, catalogue and cages are a matter of history and the attendance for the six days last year exceeded 70,000 by actual count.

With an entry fee as high as the Madison Square Garden, N. Y., and Boston with the regular class prizes identically the same and with an attendance equal to about any of the three largest poultry shows combined, who can truthfully say that Newark is not one of the "first-class" shows?

The aim of my association is to be up-to-date and progressive in every way. I am therefore anxious for ideas and suggestions from all fanciers and breeders.

Poultry Supplies

Established 1888

\$645 NET PROFIT IN FIVE MONTHS!

Proof that Sure Hatch Incubators are Money Makers

DOES IT PAY? That's what the prospective incubator buyer wants to know. We answer "Yes!"—and we prove it by the actual signed statements of thousands of "Sure Hatch" users. Here is a sample of the letters we receive by the bushel basketful:

Wichita, Kas., March 23, 1905.
Gentlemen: Beg to state, that with the five 150-Egg Sure Hatch Incubators I purchased, I have made seven hatches, hatching 4,200 chicks, doing this within five months, from Jan. 1st to June 1st. Out of the 4,200 chicks, I marketed at 12 weeks old, 3,360 broilers that averaged me 32 cents each, bringing \$1,075.60.

The entire expense of raising, feeding and marketing, aggregated \$430, leaving me a net profit of \$645. This is the only way of profitably raising chickens for the market. I remain,

Yours truly,
E. FULTON WEAVER.

This means that *each one* of Mr. Weaver's five machines produced a net profit in five months of \$129.00!

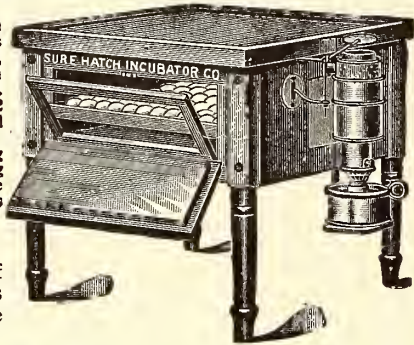

Our 1906 machines are now ready for delivery—the finest line of incubators that have ever been built. The 1905 machine was a splendid hatcher, but the 1906 "Sure Hatch" has so many important improvements that we absolutely guarantee it to out-hatch any other machine on the market. We have tested the 1906 "Sure Hatch" in every possible way, and we find that the percentage of chicks hatched is higher than ever before. 85 per cent hatches and better are the rule. In fact we find that the 1906 machine hatches every fertile egg. We have improved our ventilation system until it is absolutely perfect. The "Sure Hatch" hot water heating system in the 1906 machine has 138 square inches of heating surface—nearly two thirds more than any other machine. Our new safety lamp is all that its name implies. It builds no soot. Can't come apart. A wonderful oil-saver. These are only a few of the many improvements that make the "Sure Hatch" so far superior to ordinary incubators.

Sure Hatch on 60 Days Trial Let us send you our 1906 "Sure Hatch" on two full months' trial, freight prepaid, with the understanding that if not entirely satisfactory and superior to any other incubator on the market, we will take it back and refund your money. Each machine guaranteed for five years. Write at once for special money saving proposition and large catalogue of Incubators, Brooders and Chick Feed. Address nearest office.

SURE HATCH INCUBATOR COMPANY,

Box 66, Clay Center, Neb.

Department 30, Indianapolis, Ind.

What additional classes do you want? Who do you wish to recommend as a judge?

Is it your desire to offer a special prize?

A suggestion or a special will be gratefully received by the superintendent.

Premium lists will be mailed to anyone upon application which may be made at once so that name may be recorded.

Spratt's patent all-wire, disease and vermin-proof cages will be used and their method of feeding carried out.

The space at disposal for displays of incubators, brooders, appliances and supplies of interest to the breeders is very limited and application with deposit for space should be made immediately. Don't forget you are displaying your goods or manufactures to 70,000 visitors. No show offers such an opportunity to advertise and sell. The price is \$2 per front foot.

Full information and particulars may be had by applying to

T. FARRAR RACKMAN,
Superintendent, East Orange, N. J.

SPEARFISH, N. D.

The second annual exhibition of the Black Hills Poultry Association will be held December 21-23, 1905. J. H. Pearson, secretary, Belle Fourche, S. D.

GENEVA, OHIO.

The Geneva Poultry and Pet Stock Association of Geneva, Ohio, will hold a show January 23-27, 1906, inclusive. Phil Feil, of Canal Dover, Ohio, will act as judge. The secretary is W. H. King, to whom all inquiries should be addressed.

A SCIENTIFIC DISCOVERY

DON'T KILL THE LAYING HEN Learn the Secret of Knowing How to Select the Laying Hen From the Non-Laying Hen

This Information Will Enable You:

- 1st. To avoid killing the hen that is laying.
- 2d. To pick out the hen that is not laying.
- 3d. To know about how far advanced the hen is toward the laying point.
- 4th. To avoid wintering hens that are not likely to be good winter layers.
- 5th. To know how to select the hen having strong laying powers, for breeding purposes.
- 6th. To know the hen that has entirely lost her power of egg production.
- 7th. To know how to sort out the hens in summer or fall that have ceased laying for the year.
- 8th. To know the hen that has become weakened in her laying powers.
- 9th. To know how to buy hens in the early winter, that will make good winter layers, and dispose of them at a large profit after receiving their crop of eggs.

Illinois State Fair, Sept. 30 to Oct. 7, 1905

Springfield, Ill., October 3, 1905.
To whom it may concern: This is to certify that T. F. Potter has demonstrated to our entire satisfaction the Potter system of selecting the laying hen from the non-laying hen, and we are convinced that his system is absolutely certain.

A. G. Murray, Springfield, Ill., member Illinois State Legislature and Pres. Illinois State Poultry Association.
D. T. Helmlich, Jacksonville, Ill., has judged all leading shows for the past 15 years.

U. R. Fishel, Hope, Ind., White Ply. Rock Specialist.
J. Brinkama, 113 Adams St., Chicago, Ill., Poultry Judge.
F. H. Shellabarger, West Liberty, Iowa, Poultry Judge.
W. A. Hoyt, Whitewater, Wis., Poultryman.
H. H. Fike, Libertyville, Ill., of C. and F. White Wyandotte breeders.
F. J. Phillips, Chicago, President Chicago P. S. H., Lake-side Bldg. Henry Steinmesch, St. Louis, Mo., General Superintendent of Poultry World's Fair, 1904.
W. C. Pierce, Indianapolis, Ind., Editor Fanciers' Gazette and Poultry Judge.
J. A. Leland, Ex-President Illinois State Poultry Association.

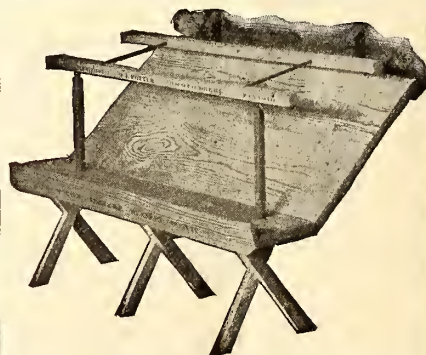

Don't kill a Hen in this Condition

These are only a few of the gentlemen who took my system, and by reading over the names you will find that all these gentlemen are men who stand high among the poultry fraternity. Send for free circular telling all about the Potter system.

POULTRY HOUSE FIXTURES.

The Potter Portable Hennery Outfit and Vermin Exterminator Roost

Within the past few years we have equipped hundreds upon hundreds of poultry houses in every part of the country with our apparatus. Poultrymen of every class use and recommend it, and pronounce our fixtures the most complete, convenient and satisfactory ever put on the market. Do not think of building a new house or retrofitting the old one until you have secured a copy of our large 30-page catalogue.

The above cut shows but one of the three styles which we make. Outfits are made in 50 different sizes to fit any house. Better send for our catalogue and see what we are offering. Inclose one red stamp if you want it.

T. F. POTTER & CO. Box A, Downers Grove, Ill.

THE WIND-UP SHOW.

A Chance To Compare The Winners From Other Exhibitions.

The Fanciers' Association of Indiana will hold its Sixth Annual Exhibition in Tomlinson's Hall, Indianapolis, Ind., February 5th to 10th, 1906. In addition to poultry we will make special classes for dogs, cats, pet stock and pigeons. The entry fee for poultry is \$1 for single entries; \$3 for breeding pens. Single entries cannot compete for breeding pen prizes. The association will pay the following cash prizes: Single entries, first, \$3; second, \$2; third, \$1; fourth, 50 cents. Breeding pens, first, \$4; second, \$2.50; third, \$1.50. In addition to cash prizes we will give an elegant silver cup in all classes where there are ten or more single entries.

Entry fee for dogs, \$2; cats, \$1; pet stock, 50 cents; pigeons, 25 cents. Premiums in this class, first, 40 per cent of entry fee; second, 20 per cent of entry fee. The Empire Couping Company, of Fultonville, New York, will have charge of caging the entire exhibit.

The judges selected are the most prominent men in the ring today; they have had years of experience and have judged the most important classes at the leading shows in America.

Mr. James A. Tucker, Concord, Mich. Light and Dark Brahmas; Buff and Black Wyandottes; all Dorkings; all Cochins and Seabright Bantams.

Mr. Geo. Burgott, Lawtons Sta., N. Y. The entire Mediterranean class as represented in the new illustrated Standard.

Wesley Lanius, Greensburg, Ind. All Game and Game Bantams; Crevecoeurs.

Ben S. Myers, Crawfordsville, Ind. White Langshans; Buff Rocks; American Dominiques; Javas; all Hamburgs; Japanese Bantams; all Water Fowls.

W. C. Pierce, Indianapolis, Ind. White Plymouth Rocks; White Wyandottes; Rhode Island Reds, rose and single combs; Buckeyes; all Turkeys excepting Bronze and Holland.

O. L. McCord, Danville, Ill. All Cochins; Golden and Partridge Wyandottes; Sultans; Black and White Rose Comb Bantams; Booted White Bantams.

S. B. Lane, Spiceland, Ind. Black Langshans; Silver Penciled Wyandottes;

Houdans; all Polish; all Orpingtons; Bronze and White Holland Turkeys.

Theo. Hewes, Indianapolis, Ind. Barred Rocks; Silver Penciled Rocks; Partridge Plymouth Rocks; Silver and Columbian Wyandottes.

C. M. Ryan, Eaton, Ind. Superintend and judge all dogs.

Our cat and pigeon judge has not been selected as yet but will be announced later.

The premium list will be ready for mailing not later than December 1st. For further particulars address E. A. Pierce, secretary, or Theo. Hewes, president, Indianapolis, Indiana.

KANSAS CITY, MO.

The Kansas City Fanciers Association will hold their annual show January 15-20, 1906. Fairchild, Fite and Wale, judges. P. H. De Pree, secretary. 932 Jackson avenue, Kansas City, Mo.

VEVAY, IND.

The Switzerland County Poultry Association will hold its annual show December 14-16, 1905. Wilk H. Works, secretary.

ZION CITY, ILL.

The Zion City Poultry Association will hold an exhibition January 4-6, 1906. Theo. Hewes, judge; C. L. Greer, secretary.

WINNEBAGO, MINN.

The Blue Earth Valley Poultry Association will hold its next exhibit January 16-19, 1906. E. W. Rankin, judge; Jas. E. Humphrey, secretary.

SPRINGFIELD, OHIO.

The Springfield Poultry & Pet Stock Association have secured Ira C. Keller, of Prospect, Ohio, to help in the judging January 22-27, 1906. Henry Traford has already been engaged, and the association aims to get the ribbons up as quickly as possible, and there will be a large number of cash and special premiums. All inquiries should be addressed to J. H. Schaefer, secretary, 35 Gotwald Bldg., Springfield, Ohio.

Egg and Feather Food

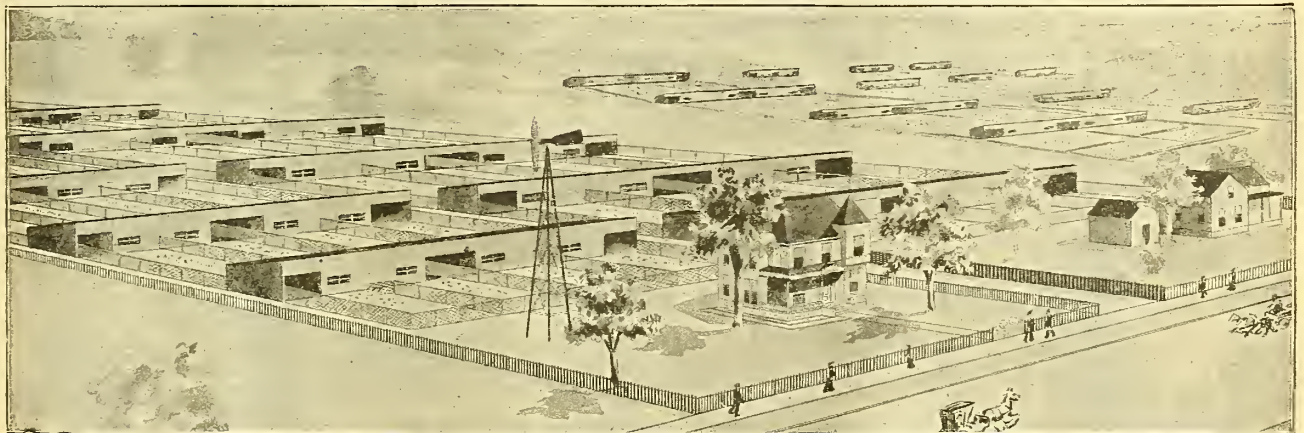

There is one thing about Midland Poultry Foods you find in no other. They are not sold as all around, general purpose foods. Fact is, you don't want that kind. What's good for everything is good for nothing. If you want eggs you want a food that makes eggs—does it naturally, without impairing any of the other delicate organs of the hen. You want eggs of good quality—not weak, watery, infertile eggs. A hen is simply a machine. Supply her with the required materials and she'll lay eggs. The quality and quantity depends on the kinds of materials she is furnished to work with.

NO.
4

Midland Poultry Food

is the greatest egg and feather producing food known. It is positively without a rival. A trial will convince you that egg production can be controlled to a remarkable degree. No. 4 makes eggs, good eggs, plenty of them and does it naturally, not by force; and it goes just one step farther—only one—it fits birds for exhibition safely and quickly, sending them in at standard weight in beautiful feather. Sold by dealers everywhere or sent direct from factory. Write for book "The Science of Poultry Feeding," it tells what Midland Foods are for and how to feed them to make the most money; also ask for book, "Poultry Fattening Perfected," they are free but worth many dollars to poultrymen.

MIDLAND POULTRY FOOD CO.,
Dept. A, Kansas City, Mo., U. S. A.

Crescent Poultry Farm, Frank Foy, Proprietor, Des Moines, Iowa

"Money in Poultry" is the title of our new 84 page thoroughly revised and illustrated book which tells how to make it; also how to feed, breed and grow and market your poultry for best results. Plans for houses; diseases, and cures; how to kill lice and mites. This book probably gives more reliable information about the poultry business drawn from actual experience, than any book of the kind published. It contains many illustrations; tells all about raising poultry for profit; feeding for eggs, broiler raising, artificial incubation and contains many valuable and interesting articles. Illustrates and describes the largest pure-bred poultry farm in the country. It also describes and illustrates 30 leading varieties of pure-bred fowls, and the Frank Foy Incubators and Brooders, and quotes extremely low prices on fowls, eggs, incubators and brooders. Mailed to any address for four cents in stamps. Address

FRANK FOY, : : Box B, : : DES MOINES, IOWA

SHOEMAKER'S BOOK ON POULTRY

and ALMANAC for 1906 contains 224 pages, with many fine colored plates of fowls true to life. It tells all about chickens, their care, diseases and remedies. All about INCUBATORS and how to operate them. All about poultry houses and how to build them. It's really an encyclopedia of chickendom, and no one can afford to be without it. Price only 15c. C. C. SHOEMAKER, Box 473, FREEPORT, ILL.

GREIDER'S FINE CATALOGUE

of Standard bred poultry for 1906, printed in beautiful color, contains fine Chromes, illustrations and describes 60 varieties. Gives reasonable prices for stock and eggs, tells all about poultry, their diseases, lice, etc. This book only 10 cents. B. H. GREIDER, RHEEMS, PA.

Two Eggs in place of ONE

AND right in the WINTER TIME too, when EGGS are 30c to 40c a dozen—But more often it's THREE or FOUR Eggs in place of one, if you use

PURINA POULTRY FEEDS

Because they are prepared according to Nature's Laws, from the HEN'S STAND-POINT, and have been TESTED by feeding until perfect—until you can depend on them for RESULTS from EVERY HEN, EVERY TIME.

Feed of the same chemical analysis as Eggs won't make Eggs. Any more than Ground Leather will grow big crops, though chemically rich in Nitrogen.

No need to make expensive PERSONAL experiments any more—when every egg you should get and don't get is that much money right out of your pocket.

For Purina Feeds have been TESTED FOR YOU—prove our claims at OUR EXPENSE.

If the RESULTS don't come, just tie up the bag and write us, and we'll return every penny of your money, and tell you what to do with the unused feed. You are not out a cent in making the trial, for we will supply you through your dealer or direct FREIGHT PREPAID and the feed used will cost you nothing.

This is the Money Back Line—Ask for particulars about our Free Test Plan. Write today. Purina Mills, B St., St. Louis, Mo.

Pacific Coast orders filled by Acme Mills Co., Portland, Ore. Canadian orders by The Tillson Co., Ltd., Tillsonburg, Ont.

NORTH BALTIMORE, OHIO.

The North Baltimore Poultry Association will hold their annual show February 16-20, 1906. Chas. McClave, judge; G. B. Smith, secretary.

SALT LAKE CITY, UTAH.

The eight annual exhibition of the Utah State Poultry Association will be held January 17-20, 1906. F. H. Shellabarger, judge; Thos. J. Fanning, secretary.

MONTEZUMA, IOWA.

The Paweshiek County Poultry Association will hold their first annual show December 19-22. A. L. Pedrick, judge; E. E. Bond, secretary.

THE 1906 NEBRASKA STATE SHOW.

The Nebraska State Poultry show will be held as usual in Lincoln, Neb., at the University Armory, January 15-20, 1906. Premium lists may be had from Luther P. Ludden, secretary. The past year the fanciers of this state have been working very harmoniously together, and this coming year's show bids fair to eclipse anything that the State Association has ever held. The past seasons many exhibitors from Iowa, Missouri, Nebraska, and Kansas availed themselves of the opportunities this show affords for exhibiting and selling stock in this country. Lincoln is known as one of the best selling shows in the west. The association prides itself on the benefit it is receiving from the state annually, and on the method which is used to satisfy all exhibitors as regards the payment of their premium money before the show is closed. This show has never been held once without paying all its premiums before the birds were taken from the exhibition hall. Fanciers living in southeastern Iowa, northern and eastern Kansas, South Dakota, Colorado, Missouri, and Nebraska can avail themselves of a lot of free publicity if they will only show their birds at Lincoln. Our premiums are very liberal and the superintendent, Mr. E. E. Day is known as one of the best in the west. He has successfully handled more than one big show. Last year he handled the Nebraska state show for us and we were so well pleased with him

that we appointed him superintendent again this year. He takes extra good care of the birds and sees that they are quickly and properly returned when the show is out. He gives them every advantage as regards position and location in the show room when they arrive, and in this way tries to give every exhibitor a square deal. He is ably assisted by a half dozen care takers who clean out the coops and feed and water regularly. Why not send your birds to Lincoln? Do not fail to remember our dates and be sure to get the premium list from the secretary.

A. D. BURHANS,
Superintendent Press.

IOWA FALLS, IOWA.

At Iowa Falls, Iowa, December 18-22, the Northwestern Fanciers' Association will hold its first annual show. A. B. Shaner has been engaged and all may expect fair treatment. A large exhibit is expected, as the management has secured a liberal donation of specials, besides the cash prizes offered. Send your name to Geo. A. Adams, secretary, for premium list.

BUTLER, PA.

The Butler County Poultry and Pet Stock Association will hold its second annual exhibition January 24-27, 1906. H. B. Arble, secretary, Butler, Pa.

MONETT, MO.

The Peirce City and Monett Poultry Association will hold an exhibition November 27, 1905. Thos. Carlin, secretary, Peirce City, Mo.

PRINCETON, ILL.

The fanciers of Princeton, Ill., have organized a poultry association called the Bureau County Poultry Association, and their first annual show will be held at Princeton, Ill., December 13-16, with F. H. Shellabarger and J. M. Rapp, judges. The secretary is Frank R. Bryant. A few years ago, poultry shows were held in Princeton and were widely and favorably known. They hope in the future to gain the same prestige. As this is a new organization and late in getting started, we trust that exhibitors will pay especial attention to this and give it the best of their patronage.

MORE EGGS

TRY THIS BONE CUTTER

LESS FEED

What's the use of keeping poultry and only making half as much from it as you ought? Increase your egg yield—cut down your feed bills—double your poultry profits. There's just one way to do it. Feed the food that makes eggs. Your hens need animal food—fresh cut green bone supplies it in the best form. Get this open hopper

HUMPHREY Green Bone and Vegetable Cutter

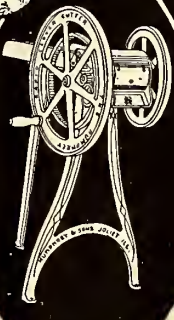

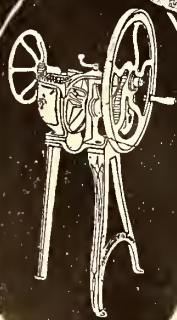

You want a bone cutter because it will double your profits. You want the Humphrey because it turns more easily, cuts more rapidly, and makes better feed than any other. It's so very simple—only three working parts—that there is no waste friction and no trouble to clean. Open hopper—always ready when you are. Turns with one hand. No springs to get out of order. No screws or split nuts to wear out. We'll give you a

FREE TRIAL IF YOU WANT IT.

HUMPHREY RAPID CLOVER CUTTER

cuts alfalfa and clover for poultry into one-eighth inch lengths. No long pieces. Cuts more rapidly and shorter than any other. Double edged knives. You ought to have one. Send to-day for free book of Poultry Helps. You will be interested and it will help you make money. Address

HUMPHREY, White St. Factory, JOLIET, ILL.

THE BIG SHOW AT ADRIAN, MICH.

The Lenawee County Poultry, Pigeon and Pet Stock Association will be one of the best points for breeders to make in their list of shows. Commencing the first week in January, just when the May hatched are showing up best, with judges, who will pass out the ribbons to the best birds, regardless of who is the owner. Valuable premiums will be given, including a silver water pitcher and goblet, nine silver cups, 125 specials from \$1.00 up to \$20.00, and several hundred cash prizes, to say nothing of several hundred other prizes offered to competitors. The show room will accommodate 1,200 birds, with separate room for dogs, cats, etc.

This association has 130 members, who are working hard to make it the best and largest show to be held in Michigan. Premiums will be paid when ribbons are up. They want exhibitors to attend, and in Adrian, they will find prizes and ribbons all right.

The 60-page premium list is now ready and can be secured by addressing J. E. Holyoke, Secretary, Adrian, Mich.

CLEVELAND, OHIO, JANUARY 29-FEBRUARY 3.

The Cleveland, Ohio, show, January 29-February 3, under the management of the Cleveland Fanciers' Club, Incorporated, Fred E. Pile, president, and F. L. Gruehl, secretary, will beyond all question of doubt attract a very large number of the most prominent exhibiting fanciers in America. The show is being built on modern, down-to-date lines. The cooping will be something new and attractive. The prizes, both

regular and special, are very liberal. The management has the confidence of the entire fraternity. A large number of specialty clubs have offered very liberal inducements to their members to exhibit at this show, and the management has very generously met all these offerings with like offerings. No fancier can afford not to show at Cleveland. The judges engaged are Hewes, Rigg, Orr, Sites, McClave and Donkin.

CINCINNATI, JANUARY 16-19.

Cincinnati, Ohio, January 16-19, the American Poultry Association show, as it is now referred to in some quarters, promises to meet every pledge made by Secretary Foy and his associates when they were making the campaign for the annual meeting of the American Poultry Association. The tide is running toward Cincinnati. There is to be something doing at this meeting, and it is safe to say that it will be very largely attended by fanciers from every part of the country. The show management proposes to meet the demand that they put up as good a show as will be held in America this winter. They are going to do it, so they say. Messrs. Orr, Rigg, Hewes and Shepard will place the awards.

BRADFORD, PA.

The McKean County Poultry, Pet Stock and Horticultural Association will hold its next annual exhibition Jan. 29th, 1906. Keller will judge the poultry. Premium list and any other information will be gladly furnished by the corresponding secretary, E. L. Jones, Bradford, Pa.

The Difference in Profit

from a single hatch may pay the difference in cost

between an incubator of Victor quality and one of the cheap kind. Don't be fooled. There is a great difference in results. Let us send you "The Victor Book," which tells why Ertel machines make more money for their owners.

It is a question of profits with you. You owe it to your own pocket to find out what our machines can do for you, before you purchase elsewhere.

Our Victor Book begins at the beginning and tells all the facts about lumber, about copper tanks, lamps, burners, regulators, thermometers, and all the points which the man or woman who runs the machine wants to know. We tell you how we build an incubator. What you would see if you came to Quincy and spent a day in our factory. We are careful to tell the exact facts, because, with every machine we sell, we send a Bond under the seal of our Company, agreeing to take it back and refund your money if it is not in every way as we said it would be. We have built up an enormous trade by honest and fair dealing. We can't afford to make a single statement that is not so. Ask anybody in Quincy who knows us or anyone anywhere who has ever had dealings with us whether it is safe to do business with us.

Established 1867.

BALANCED RATIONS

FOR FOWLS

Did you ever stop to think what a lack of system there is in feeding fowls? What hit or miss? And yet what wonderful results have been accomplished in spite of all this. What might results be if scientific feeding was the rule instead of the exception? It's a well-known fact that no one food will answer for all purposes. The same food you feed old hens will not do for young chicks; food that makes eggs won't fatten broilers profitably.

Midland Poultry Foods

10 of them—balanced rations—every one for a specific purpose, make it possible for every poultry raiser to feed scientifically, and make more money.

Ever figure on what it means to know before hand what a certain food will do? There are many advantages in having foods for specific purposes. For instance, you feed No. 4 MIDLAND POULTRY FOOD—you get eggs, lots of them. If you don't get eggs you get nothing and the food's a failure. But suppose you fed some so-called poultry food, said to make eggs, and do all sorts of things for fowls, and you didn't get eggs, you might keep on feeding it for the other things it was GOING TO DO and waste your money and time.

We say what every one of our 10 Foods will do, and we stake our reputation on the food for that certain and single purpose—not much chance for us to do business if we fail to make good, we cannot dodge behind the other good things they may do. You do not need all ten of them. You do need some of them. Our book, "THE SCIENCE OF FEEDING," FREE will tell you which you need and how to feed, and our book, "POULTRY FATTENING PERFECTED," will show you how to make a lot of money. Write today for one or both books. MIDLAND FOODS are sold by dealers everywhere, or we will send them direct from factory.

Midland Poultry Food Co., Dept. A, Kansas City, Mo., U.S.A.

ELWOOD, IND.

The third annual show of the Elwood Poultry and Pet Stock Association will be held at Elwood, Ind., Dec. 18th to 25th, 1905. Prospects for a great show are better than ever before, and we already feel confident of great success.

S. B. Lane, of Spiceland, Ind., has been secured to judge the show this season, and this alone guarantees every exhibitor entire satisfaction.

Exhibitors will be treated with every courtesy, and their birds will receive the best of care and treatment.

Our premiums are as good as the best, and we offer a beautiful silver cup in addition to a large list of other special premiums. All premiums guaranteed and will be paid on the last day of the show.

Get in line and send some birds to Elwood, as this will be headquarters, Dec. 18th to 25th, 1905.

Premium list or other information may be had by addressing the secretary.

S. W. SWIHART, Secretary.

IOWA'S LEADING WINTER SHOW.

Webster City, Iowa, will hold the largest and best mid-winter show in the state. We have not been making much fuss about it, but every member has been doing the most that he could to make this Iowa's banner show, and we are now prepared to do it. This is the only show in the state that is different; we employ the very best judges that can be secured—the Hon. Sharpe Butterfield, of Canada, will do the scoring this time—January 1-7, 1906.

Our cash prizes are worth going after this year, and the association will pay all awards in full the last day of the show. Please drop a card to the secretary asking for catalogue, as our mailing list has been revised and you may not get one if you don't ask. This is an exceptionally strong outside show, and all exhibitors are cordially invited to be with us. Start the New Year right by

The Premier Portable Poultry Houses

FOR PRACTICAL POULTRYMEN

winning a prize in the hottest competition in the state. Don't forget, Webster city, Iowa, the first week, in January, 1906. Catalogues ready now.

FRED HAHNE,
Secretary.

Webster City, Iowa.

FAYETTE, MO.

The fourteenth annual exhibition of the Missouri State Poultry Association, to be held in Kirksville, Mo., Dec. 12 to 16, 1905, promises to be the best in the history of the organization. Gov. Folk has offered a magnificent silver loving cup to be competed for by Missouri breeders; the White Wyandotte Club will offer a silver cup; also their usual ribbons; the Ivory Soap people will offer another of their handsome silver cups for the whitest bird washed with their soap; the S. C. Buff Leghorn Club offer handsome ribbons, as does also the Blue Andalusian Club; it is expected that the Buff Rock State Cup will also be competed for at this show. Liberal premiums are offered on all varieties, and with such judges as Hewes, Rhodes and Emry, the entries should be full in all classes. Send for premium list to the secretary, H. P. Mason, Fayette, Mo.

WINFIELD, IOWA.

The Winfield Poultry and Pet Stock Association will hold its fourth annual exhibition Dec. 27th to 30th, 1905. The preceding exhibitions have been more successful than its most enthusiastic members dreamed of. And this year, besides our regular cash premiums, and the large governor's silver cup, special cash prizes for highest scoring pen and highest scoring 10 in the different varieties, and other specials. A large coru carnival in connection, will make it one of the largest shows in southeast Iowa this season. And will be a good place for breeders to come to sell and advertise. Premium lists are now ready. Send for one. A. B. Shaner, judge. Russell Canby, secretary.

THE TENTH ANNUAL CHICAGO SHOW.

It is the determination of the management of the National Fanciers' and Breeders' Association to make their exhibition, to be held the week of Jan. 22nd to 27th, both inclusive, 1906, the greatest and grandest of the series of successful Chicago shows. The most prominent of the breeders and fanciers of poultry, pigeons, cats and pet stock of all kinds have already signified their intention of being in attendance, with an entry of their finest specimens. The best incubators and brooders of the country will be shown in operation. Foods and supplies and appliances pertaining to the great industry, which this enterprise represents, will compete for the favorable attention of the crowds which will throng the vast hall.

Premium lists with classifications, rules, list of judges and apportionment of same, and all necessary information to exhibitors and patrons, will be issued about Dec. 15, 1905, while the mailing list includes 20,000 names, and it is the purpose to send to all interested, yet some may by mistake be missed.

All such and those deserving specific information should write to Fred L. Kimmey, Secretary, Room 500, No. 325 Dearborn St., Chicago, Ill.

Bateman's Black Langshans

Won at World's Fair, 2, 4 cock; 7 hen; 2 chl.; 6 pullet; 2 pen. Won more Illinois special prize money than all other exhibitors combined. Won 1, 3 cock, 4 hen, 2 cockerel, 1 pullet, 1 pen in the state. Have won largely at Chicago repeatedly. At December 1904 show, won 1, 4, 5 cocks; 1, 2 hens; 1, 2, 3, 4 cockerels; 1, 2, 4 pullets; 1, 2 pens; Silver Cup for best display. Exhibition or breeding stock for sale.

Collinsville, Illinois

HAHNE'S PRIZE WINNING LIGHT BRAHMAS

A Grand Opportunity—We have about 500 fine home grown, farm raised Light Brahmas that we are going to dispose of during the next thirty days, and to do this we will make the price right if you will only tell us what you are needing. If we have not got what you want we do not want to sell you and will notify you promptly that we can not fill the order. Our birds have appeared in the show room during the past seven years and have always taken the big end of the good premiums, no matter how hot the competition. Illustrated catalogue free. Do you appreciate farm grown stock? Be prompt if you want some of them.

FRED HAHNE, 517 Webster Street, WEBSTER CITY, IOWA

BIG PRIZES

BOYS AND GIRLS

Make Your Hens Bring You Dollars

Here is a golden opportunity for boys and girls under 17 years of age to earn big prizes and to gain a great deal of valuable experience which will help them all their lives. We want to establish a lot of records showing the very greatest possible ratio of increase in egg production by feeding hens "International Poultry Food." We want boys and girls everywhere to learn how to feed it and make their hens bring them more money. We are going to pay them well for helping us—so we are offering a

\$ 5 cash prize for the 5 hens laying the most eggs in 90 days
\$10 " " " " 10 " " " " " " " " " " " "
\$20 " " " " 20 " " " " " " " " " " " "

and ask the boys and girls to enter this contest and work to win one of these prizes. It won't cost a cent entry fee and the reward will be good pay for all the trouble. Tell your father and mother that they are invited to enter for the prizes offered to adults in this great

INTERNATIONAL Egg-Laying Contest

the object of which is to demonstrate that it is a money-making proposition to feed "International Poultry Food" and increase the quantity of eggs from each hen fed. One extra egg a month from each hen more than pays the cost of feeding this food—all the rest of the increase is clear profit, and there will be lots of extra eggs. How many is just what we propose to find out by this contest. Let every boy and girl who own five or more hens make application at once and start in to win one of these cash prizes. We'll give you all information and send record blanks and book, "Money in Poultry," etc., free. "International Poultry Food" largely increases the production of eggs. Made of powdered roots, herbs and seeds and is a conditioner of great medicinal value. It stimulates the appetite and keeps chickens healthy.

732 Eggs from 12 Hens in 61 Days

Adams, Penn.
Personally appeared before me, Miss Maggie Milliron, who, being duly sworn, states that she has 12 Hamburg hens and has received and sold 732 eggs from them during April and May by using "International Poultry Food."
[Signed] MAGGIE MILLIRON.
Before JOHN ADAMS, J. P.

Our broad \$1000 cash guarantee is printed on every package. Beware of cheap imitations and always insist on "International." Over 100,000 dealers sell it. If your dealer will not supply you write direct to us. Write today, mention this paper and we will also send free a beautiful picture in 6 colors of Fisher's \$500 Rooster. INTERNATIONAL STOCK FOOD CO.
MINNEAPOLIS, MINN., U.S.A., ALSO TORONTO, CAN.

"INTERNATIONAL LOUSE KILLER" IS A PURE WHITE POWDER - 25¢ PER BX.

ANGOLA, IND.

The Tri-State Poultry and Pet Stock Association will hold its fifth annual show in Angola, Ind., January 24 to 27, 1906. Judge S. B. Laue, who gave such excellent satisfaction last year, will officiate again this year. The association has already held four successful shows, and present indications point to a larger and better show than ever before. A large, well lighted room, courteous treatment to exhibitors, liberal cash premiums in all classes and sweepstakes are popular features of our show. Catalogues will be out early in December, and W. K. Sheffer, secretary, will be pleased to mail all interested a copy.

BRADFORD, PA.

The McKean County Poultry, Pet Stock and Horticultural Association will hold its next annual exhibition the week commencing Jan. 29, 1906. Ira C. Keller will do the judging. Premium list and any other information will be gladly furnished by the corresponding secretary, E. L. Jones, Bradford, Pa.

\$125.00 IN GOLD

Will be given as special premiums by the Northwestern Ohio Poultry and Pet Stock Association, January 10 to 13, 1906. This in addition to their regular cash premiums, the best lighted show room in the state and Chas. McClave to place the awards should bring together one of the best exhibits ever shown in the state. This association is composed of up-to-date fanciers, and with their

push, energy and good fellowship are bound to be among the leaders. They have the money in hand, and guarantee to pay all premiums in full. Send to V. Crabtree, secretary, Tiffin, Ohio, for premium list.

SCRANTON, PA.

Scranton, Pa., will hold a poultry show Jan. 15-20, 1906, at which J. H. Drevenstedt and others will judge. The entries will be limited to 1,000 birds, and will be cooped, fed and handled by Spratt's patent. The show will be up-to-date in every way, with a big list of cash specials; \$100 cup for best bird to be won three times, \$1.50 and 75-cent cash prizes, besides five beautiful and original ribbons. The hall is well lighted and on the principal avenue of this city of 120,000 people and will be of great advertising value to the exhibitors.

BUFF COCHINS AT CHICAGO SHOW.

Having learned from one of the exhibitors of Cochins at last winter's Chicago Show and a member of the American Buff Cochin Club, that buff cochins occupied a very poor position in the hall, in fact, were "relegated to benches under the gallery," I took the liberty of writing to Mr. Kimmy, the Secretary, and asking him to let me know if Buff Cochin exhibitors might expect better treatment this year. In his courteous reply he states, "I will see to it they are not neglected

this time. You may assure prospective Buff Cochin exhibitors that they will be fairly treated."

The buff cochin is undoubtedly the most handsome and attractive show fowl in existence to-day. A fine exhibit in the center of the hall, in the most prominent location would delight and attract thousands of visitors that would pass heedlessly by other varieties. With a view of securing the largest and most representative exhibit of buff cochins ever seen in Chicago or in America, I will offer a handsome silver cup to the member of the American Buff Cochin Club making the largest and best exhibit. The cup offered last year for best cock, hen, cockerel, pullet and breeding pen must be won three times before becoming the property of the winner. This will be up again for competition. It is expected that the club will offer several cash specials. Now for a rally of Buff Cochins, and more particularly of buff cochin breeders. Such a great gathering is absolutely necessary for careful and exhaustive discussion of the "ideal Cochin", and the most thorough handling of any or every buff cochin on exhibition in the presence of the club and our most experienced judges.

One exhibitor of last year has written me to the effect, "I have read your article on the 'ideal cochin' and quite endorse your remarks as to the desirability of the judges and breeders of Cochins getting together."

HOLMHURST POULTRY YARDS.

Whitby, Ont., Can.

LABORATORY SPECIALTIES

For The Poultry Raiser.

A Few Things Needed Right Now.

Cyphers Poultry Remedies are prescriptions of a leading Doctor of Medicine that have received the test of years of successful use. Like all other Cyphers Company products they are prepared with the knowledge that the **best ingredients give the best results**, and this is more particularly the case with Laboratory Products. There is danger in cheap, carelessly compounded preparations.

Let us impress upon you that back of these goods stands the good name of the Cyphers Company, the experience of an unequalled staff of workers, and several years testimony of thankful customers who think that the **best is none too good for their poultry**.

At this season many poultrymen ask: How can I bring my fowls through the winter in a healthful, thrifty, profitable condition? How can I keep them free from disease? How can I increase the egg production? How maintain their vigor and vitality?

Cyphers Laboratory Specialties

cover the case completely. The best way to tell about these things is to give you a list of our

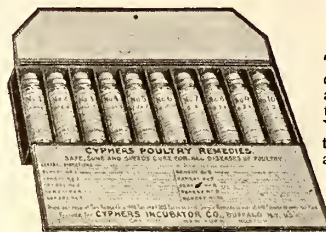

Full Nest Egg Food	Roup Cure
Fumigating Candles	Lice Paint
Save-All Egg Preservative	Anti-Fly Pest
Nodi Charcoal	Lice Powder
Ovinaphthol Lice Killing Nest Egg	
Napreol Disease Remedy and Disinfectant	
Poultry Medicine Case containing Ten	

Standard Remedies in vials sold in the case or separately, each vial containing specific remedies respectively for **catarrhal colds, bronchitis, croup, snuffles, rattling in throat, watery discharge from eyes and nostrils, eye swelling, roup, chicken pox, bumble foot, diarrhoea, cholera, canker, vent gleet, indigestion, liver disease, sour crop, constipation, limber-neck, egg bound, rheumatism, cramps, worms**

Send for our Poultry Supply Catalog. It is free and contains full description of all these goods.

Address nearest office.

Cyphers Incubator Company,
Factory and Home Offices, Buffalo, N. Y.

Cyphers Poultry Medicine Case.

Guaranteed Efficacious.

Ten standard poultry remedies in strong, light-tight case. Recommended by the highest medical authorities and used by the regular profession. Remedies are in tablet form and are given the fowls in drinking water. You may avoid a severe and costly scourge by having them on hand. Full directions on each bottle. Guaranteed perfectly safe. Will cure all the common ailments of poultry such as bronchitis, croup, roup, diarrhoea, canker, rheumatism, chicken-pox, etc. Complete set of ten remedies, in a neat cloth-covered case, sent postpaid to any address, \$3.00.

Cyphers Roup Cure.

Cure Guaranteed.

The one certain remedy for roup in all forms. Prevents and cures common colds, discharge from nostrils, "swelled head," canker, etc., **in all poultry**. Is used by dissolving in fowls' drinking water: they take their own medicine. 50c package makes twenty-five gallons of medicine. Price: small package 50c. large package \$1.00. We pay postage.

Full Nest Egg Food. 60 Feeds for 1 Cent.

The success of this tonic and conditioner has been remarkable. It increases egg production, promotes health, insures vigor in fowls and fertility of eggs. In addition to medicinal seeds, vegetable extracts and mineral salts, it contains in a highly concentrated form, the necessary animal food for egg production. Takes the place of bugs, worms and insects in the fowl's diet and the scraps and pepper "mother used to use." It builds up the fowl's system, improves the plumage and increases your profit. Price, 42 ounce carton, 25c; 25 pound pail, \$2.00.

Trade Napreol Mark.

A concentrated preventive of Disease.

A non-poisonous fluid, highly concentrated that kills germs, destroys odors and prevents disease. One gallon of Napreol makes 100 gallons of disinfectant—invaluable for use in poultry houses, stable, dog-kennels, toilets, sinks, cess-pools, etc. Guaranteed a positive cure for scaly legs, etc. Price: ½ gallon can, 85c. Gallon cans, \$1.50.

Sold by 2500 Local Dealers. Ask for it.

Branch Stores and Warehouses: 23 Barclay St., New York; 26-30 Union St., Boston; 310 6th Ave., Chicago; 329 Sansome St., San Francisco; 2325 Broadway, Kansas City; 119-125 Finsbury Pavement, London, E. C. England.

ELWOOD POULTRY ASSOCIATION.

The Elwood (Ind.) Poultry Association is growing and it is getting ready for a big show December 18-25, 1905. This will be the third show, and they are making preparations for the largest ever held. The outlook is they will by far have more entries than at any previous time. They have a good hall and a good list of specials. The premium list is now ready and can be obtained by addressing the secretary, S. W. Swihart, who will give any information desired. He is hustling for business and he has a good board to back him. They have selected S. B. Lane to place the awards, which will assure the exhibitors of fair treatment and honest awards, and would advise all that can to send their entries to the Elwood show. You will have fair and honorable treatment and be glad you attended.

S. B. JOHNSTON.

MINNESOTA STATE POULTRY ASSOCIATION.

Geo. A. Loth, Secretary, box 47. For twenty years this association has increased its educational features, until today it is one of the foremost in the world. We own the finest and most complete single cooping system in America, and pay larger cash premiums in proportion to the entry fee of any association; we have 20 silver cups to be competed for, and no association is more particular in the selection of its judges than ours.

This year we will have on poultry, Sharp Butterfield, London, Ont.; Geo. D. Holden, Owatonna, Minn.; Theo.

Hewes, Indianapolis, Ind.; D. E. Hale, Merriam Park, Minn.; Fred May on pigeons; Mrs. C. H. Davis, Chicago, on cats and pet stock, and Mrs. F. Rollo Woodruff will judge the dogs.

The business interests of the city of Minneapolis, recognizing the beneficial results accruing to the poultry industry of our state, through the educational features of our show each year, have contributed enough money, which is now on hand, to assure every cash obligation before the close of the show.

In point of show room attractiveness and as entertainers, we certainly have demonstrated our superiority over all other shows to the visiting breeders and fanciers.

We are preparing for greater things than ever, and extend a cordial invitation to all to come and win our premiums, and see America's greatest show. Premium list Dec. 1st. Entries close Jan. 15th, 1906.

GEO. A. LOTH,
Secretary.

THE AMERICAN PLYMOUTH ROCK CLUB 15TH ANNUAL MEETING AND 1905 CATALOGUE.

The fifteenth annual meeting of the American Plymouth Rock Club will be held January 3, 1906, at Madison Square Garden, New York. This will be an event extraordinary. Besides the National Club Cup, there will be thirty-eight cash specials amounting to \$450 awarded to members only.

The 1905 catalogue is out and is mailed free for 4 cents in stamps to pay postage. This is without doubt the handsomest and most valuable poultry

book ever issued. It contains the latest portraits of several well known breeders and two dozen up-to-date articles by acknowledged authorities.

The club with its 1200 members is booming things in the Barred Rock line and every breeder should own membership in the World's Largest Poultry Specialty Club. The membership fee is \$1. Write me to-day. Please have your name enrolled now and be elected at the New York meeting. H. P. SCHWAB,

Secretary, Rochester, N. Y.

P. S.—Another great boom on at Chicago. Lots of cash specials. Write Dr. Bennett, Mazon, Ill., secretary of the club special committee for particulars and to F. L. Kimmey, Chicago, Ill., for premium list with specials. H. P. S.

AMERICAN BUFF COCHIN CLUB MEETING AT CHICAGO.

The American Buff Cochin Club will hold its annual meeting at Chicago in connection with the poultry show of the National Fanciers' and Breeders' Association in the 7th Regiment Armory. The meeting will be held Wednesday afternoon at 2 o'clock, at a place to be agreed upon at the time of meeting. Buff Cochin breeders, whether members of the club or not, should make an effort to be present. The display of Buff Cochins at this show will doubtless be very fine. The president of the club, Dr. J. J. Hare, Whirby, Ont., offers a handsome silver cup for best and largest display of Buff Cochins made by a member of the club at this show. It will be remembered also that Dr. Hare offered last year a splendid cup for best cock, hen, cockerel and hen shown at

NEW ILLUSTRATED STANDARD

HOW TO GET IT

The Price of Standard is \$1.50

This price is established by American Poultry Association, and is the same no matter where purchased,

But the Special Offers below of American Poultry Journal help you to get the Standard cheaper

Send us

\$1 and one new subscriber at 50c. \$1.50 in all. 75c. and 2 new subscribers at 50c. each, \$1.75 in all. 50c. and 3 new subscribers at 50c. each, \$2 in all. Send us six new subscribers at 50c. each, \$3 in all.

This last offer enables you to get your Standard **FREE.**

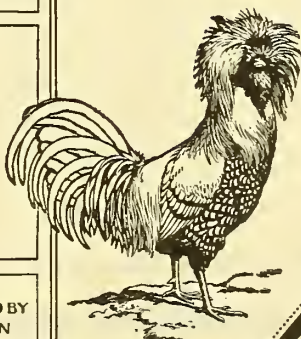

THE STANDARD IS A NECESSITY to every poultryman. It is the authority which judges go by at the poultry shows. It describes every standard variety, giving the correct shape, size, color, etc., that a perfect bird should be. With a copy of this book you can judge your own fowls. It enables you to know your best birds, which to take to shows, which to mate for best results. The book contains over 300 pages with nearly 100 illustrations. The price of it made by the American Poultry Association is \$1.50. Address

HENS TIRED?

Don't use the axe yet. They need EGGE—the LUCKY BRAND EGG BUILDER. Put EGGE with their feed daily. Watch 'em. Watch the laying nests. See the eggs grow in numbers. You'll be surprised.

Some of the hens you said were "no good" will lay twenty-two eggs a month. Why? Because EGGE is just fitted for hens. Makes their food digest better. They'll be lively, bright-eyed, more vigorous. Their flesh is delicious—their eggs good size. They're money-makers for you and the cost

but a small fraction of the profit. Your dealer sells EGGE. Our free, illustrated book tells how cheap you can feed EGGE. Write for it, tell us your hen troubles, and enclose 2 red stamps for generous sample. Prices: 25c, 50c, \$1, \$3.50 a can.

American Stock Remedy Co., Box 100, Quincy, Ill.

Chicago, this prize to be won three times before becoming absolutely the property of the winner. The cup is now in possession of Mr. T. A. Hefner, Cedar Rapids, Iowa. The American Buff Cochinchin Club offers \$5.00 in gold for best male, and \$5.00 in gold for best female shown at the club show. All prizes are to be competed for by members of the club only. Every lover of the Buff Cochinchin, the greatest of all show fowls, should join the American Buff Cochinchin Club. Send your name with \$1.00 for membership fee to Mr. Lee Potts, treasurer, Thornton, Ind.

E. W. RANKIN, Secretary.

**IT GRINDS WELL
AND
MAKES SHELL**

Because Pearl Grit is always sharp
no matter how small the particles be-
come it's a perfect grinder. Because it
contains eggshell-forming, feather-
building, sinew-strengthening materi-
als which the fowl's system assimilates
and which reinvigorate and build up
the physical organism, no other shell-
making material is needed when you
use Pearl Grit. This is

Proved by Actual Test

and by chemical analysis which shows
that it contains all the essential prop-
erties of grit and shells. We guarantee
it absolutely to take the place of grit
and shells combined. It makes strong,
healthy, prolific fowls; has no dust and
no waste. Saves labor, time and money.
At once a money saver and profit
maker. If you raise poultry, you can't
afford to be without

Pearl Grit

You will find it exactly as repre-
sented—a wholesome, clean, sharp,
nutritive grit. Meeting every require-
ment of the practical poultryman,
whose object is to secure the largest
returns for his money. A trial will
convince you. Write for prices.

INDIAN GAME CLUB.

The Cornish Indian Club of America
is working to get a large exhibit of this
noble, useful and beautiful breed for
the Chicago show. Every breeder and
fancier of this noble bird is requested
to send a string of this noble breed to
this show and attend in person. A fine
list of specials with the regular prizes
will be offered. The club will hold a
meeting Thursday, 7 p. m., during show
week. In order to further this interest
we wish to urge every member of club
and every breeder of Indians to do all
in their power to help the cause, and if
not a member of the club, join now.
Membership fees \$1. Trusting to re-
ceive your hearty support and co-opera-
tion. We remain yours fraternally,

REV. H. A. HUEY,
Secretary and Treasurer.
Casnovia, Mich.

BUFF ORPINGTON CLUB.

The National Single Comb Buff Or-
pington Club will offer handsome silver
cups valued at \$10.00 each at the follow-
ing shows: San Francisco, Cal.; Den-
ver, Colo.; Danville, Ill.; Goshen, Ind.,
and Toledo, Ohio. These cups are to be
offered on largest and best display.
Points to be figured as follows: First
prize, six points; second prize, four
points; third prize, two points. Com-
petition only open to members in states
where cup is offered.

The executive committee has decided
to hold their annual meeting at the No.
Indiana and So. Michigan Poultry,
Pigeon, Dog and Pet Stock Association,
to be held at Goshen, Ind., Jan. 1st-6th,
1906. This show has been selected for
three very important reasons: 1st. It
is centrally located; 2d. Last year this
show had over 150 entries of S. C. Buff
Orpingtons, making this the largest
entry of S. C. Buffs of any show in the
middle west. 3rd. The local association
has granted every request in the way of
specials and judges that was asked by
the club.

The Buff Orpington class will be
judged by W. C. Ellison of Pewaukee,
Wis., who is well qualified to pass on
this new breed and thoroughly under-

EVERYTHING FOR THE FOWL FAMILY

We appreciate the fact
that the practical poultry-
man and the farmer who
keeps a few hens are always
anxious to increase their profits,
and want the best foods and ap-
pliances they can get to do that.
For over sixteen years we have
been handling poultry supplies.
We have built our business on
the theory that the best is none
too good, but that it always pays
to sell the best. Our business
has grown bigger every year—
tangible evidence that we supply
high grade goods at reasonable
prices, that we deal fair and
square, and that our patrons
know the advantages of buying
everything they need from one
house. You will, too, when you
get your first order from us.
Our catalogue illustrates and
describes an immense line of

POULTRY SUPPLIES

as Cut Alfalfa, Clover Hay, Electric
Poultry Food, Mixed Grains, Chick
Foods, Crushed Oyster Shells, Beef
Scraps, Bone and Meat Preparations,
Animal Meal, Blood Meal, Ground
Charcoal, Grits of all kinds, Egg and
Stock Foods, Remedies, Condition
Powders, Lice Killers, Insect Ex-
terminators, Spray Pumps, Leg
Bands, Chicken Markers, Caponizing
Instruments, Thermometers, Egg
Testers, Lamps, Nest Eggs, Nests,
Egg Boxes and Baskets, Drinking
Fountains, Pigeon Supplies, Feed
Pans, Clover Cutters, Root Cutters,
Green Bone Cutters, Incubators and
Brooders, Poultry Houses, etc.—
there's nothing you need that we
don't have, and our catalogue will
be worth money to you. Write for it.

A BETTER LOCATION THAN YOURS

Would be in Virginia, North Carolina, South Carolina, Georgia, Florida or Alabama, or some other Southern State, and we can prove it. Write for a copy of the special Southern edition of the

SEABOARD AIR LINE MAGAZINE

which is handsomely illustrated, and contains hundreds of specific opportunities for success, it matters not what your occupation.

J. W. WHITE

General Industrial Agent, Portsmouth, Virginia.

SEABOARD AIR LINE RAILWAY

stands the true type of the Orpington fowl.

Five elegant silver cups valued at \$10.00 each will be offered by the club at this show, to be competed for by points.

The committee has also decided to offer large, handsome silver cups valued at \$25.00 each, to be given at Madison Square, New York, on the largest and best display; Cincinnati, Ohio, on the best shaped mail bird; Chicago, Ill., on the largest and best display.

All the above specials to be competed for by club members only. New members must have their application in to the secretary five days before show opens. Full particulars with latest literature concerning the club may be had by addressing the secretary, Will H. Schadt, Goshen, Ind.

THE NATIONAL TOULOUSE GOOSE CLUB.

Will hold its fourth annual meeting in Chicago, Jan. 26, 1906, 2 o'clock p. m., in the club room of the hall where the N. F. and B. A. holds its big annual show. All members and interested parties are requested to be present.

Mrs. B. F. HISLOP,
Milford, Ill. Secretary-Treasurer.

THE NATIONAL BRONZE TURKEY CLUB.

Will hold its tenth annual meeting at Chicago, Jan. 25th, 1906, at 2 o'clock p. m., in the club room of the hall where the N. F. and B. A. holds its big show. The club offers a \$25.00 silver cup at this show to the members exhibiting the best breeders' flock of seven Bronze Turkeys, the same to consist of 1 cock, 2 hens, 1 cockerel and 3 pullets. Winning decided by counting points.

Mrs. B. F. HISLOP,
Milford, Ill. Secretary-Treasurer.

TO BANTAM BREEDERS.

The International Bantam Breeders' Club will offer a state cup at the Wisconsin State Poultry Show, Oshkosh, Jan. 15 to 20, 1906. This show will be the bantam show of Wisconsin, and I call a meeting of the Wisconsin members of the International Bantam Club,

as well as any visiting members and all interested in the Bantam fancy, to be held in the club room provided by the state show on Friday, Jan. 19th, at 2 p. m. I hope for a large attendance. This is the opportunity of Wisconsin breeders of the bantam fowl to show how strong they really are.

FRED Y. PARFREY,
State Vice President.
Richland Center, Wis.

INTERNATIONAL BANTAM BREEDERS' CLUB.

For a number of reasons the officers of the International Bantam Breeders' Club have decided to postpone the annual catalogue until next spring. There are so many important announcements to be made after the winter shows, and especially after the annual meeting that it was thought best to hold the catalogue for them. In the meantime the special offer of \$1 for membership in the club until October 1, 1906, will be continued until February 1st. Every breeder of bantams should send for the club circular which explains all about the club and this offer. We now have members in Canada, England, and all sections of the United States.

FRANK W. RADFORD, secretary.
Oshkosh, Wis.

SILVER WYANDOTTE CLUB CATALOGUE.

The annual catalogue of the Silver Wyandotte Club of America, is now ready, and can be had free by addressing

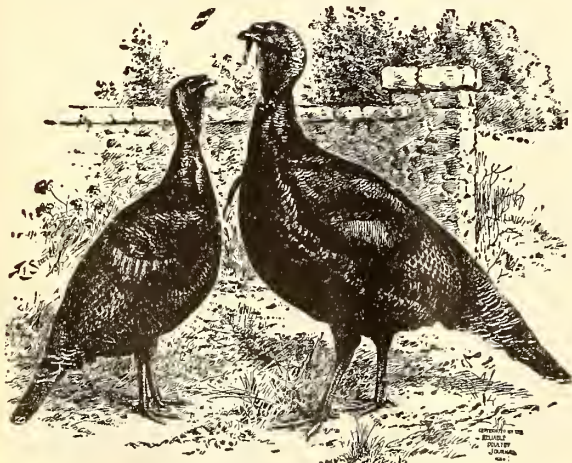

A. C. LEDUC,

BARRED PLYMOUTH ROCK BREEDERS.

"Get into line" for the next Madison Square Garden Show, 1906.

The American Plymouth Rock Club will offer \$450 in cash prizes to be awarded to members only, at the next Madison Square Garden Show, January 2-6, 1906.

This money has all been paid in to the secretary of the Committee on Funds for this show, and the prizes will be paid promptly as soon as the marked

BRONZE TURKEYS

I am happy to say I have reared this season more and better Bronze Turkeys than ever before. At

Great St. Louis World's Fair

my Turkeys won fourth Old Tom, first, second, third, sixth and seventh Young Tom, first, second, fifth and sixth Hen, first, fourth, fifth and seventh Pullet, and SILVER CUP for BEST DISPLAY. This in competition with the best Bronze Turkeys in the world, for we know there never was such a display of Bronze Turkeys as was shown at St. Louis. At

Madison Square Garden, New York, '05

I exhibited eighteen birds, winning EIGHTEEN PRIZES; two firsts, five seconds, six thirds and five fourths. What better proof can I give you as to the excellent quality of my Turkeys? I have something like

Four Hundred For Sale

Splendid breeding Toms both old and young, Pairs, Trios, Breeding Flocks and Exhibition Birds—any way to please you. Send a 2-cent stamp for Turkey Catalog.

MRS. U. R. FISHEL, Box A, HOPE, IND.

catalogues of the show are printed. This money will be divided into 38 prizes, with no prize less than \$10. In making up the list of prizes the interests of new exhibitors as well as those who have made the show in the past, have been carefully looked after. We have secured two well known judges to place the awards on the large classes that we expect to have at this show, and the judging will be done promptly.

Full list of the prizes will be printed in the Premium-list of the New York Poultry and Pigeon Ass'n, H. V. Crawford, secretary, Montclair, N. J.

The Illinois State Silver Loving Cup, value, \$25.00, given by the American Plymouth Rock Club for the best Barred Rock cock, hen, cockerel and pullet shown by club member from Illinois will be competed for at Chicago, Jan. 22nd to 27th, 1906. The Illinois state meeting will be held at the show room Wednesday, Jan. 24th, 1905, at 2:30 o'clock, for the election of state officers and the transaction of such other business as may come before it. All are cordially invited to attend.

At this show \$200.00 in cash specials will be open to competition to all club members.
DR. O. P. BENNETT,
State Secretary.

Mazon, Ill.

THE PORTLAND EXPOSITION AWARDS THE INCUBATOR PRIZE.

Incubator manufacturers have been keeping a watchful eye on the Portland Exposition as the time approached for awarding the prizes. The exposition is now closed and the expected has happened. The Petaluma walked off with the gold medal.

This really occasioned very little surprise. The Petaluma is regarded not only in the west Coast states but all over the country as an incubator of the first rank. And the company maintained an exhibit at Portland that was daily admired by thousands of visitors. It was so attractive and complete that had the matter been left to visitors on general appearances there would never have been any question as to who should have had first honors. Of course the judges had to go into other matters and consider the real merits of the machines, both incubators and brooders, and the Petaluma won out.

The Petaluma, by the way, has acquired the habit of winning gold medals. It did it at the World's Fair at Chicago, at the Pan-American at Buffalo, and at all the fairs where they have exhibited from that on down to the Lewis & Clark Exposition.

We congratulate the Petaluma Company and are glad to publish the award to our readers. They and the general public are not so much interested in the matter of the honor as in being informed how the different machines rank when they are put on trial together and judged by competent authority. We believe no question has been made, in this instance, of the incubator honors being worthily bestowed.

Klein & Anderson, of Macon, Ill., won at the Illinois State Fair recently the following: Barred Plymouth Rocks, 3d cockerel, 3d pen; Partridge Cochins, 1st and 3d cock, 1st, 2d, 3d cockerel, 1st and 2d hen, 1st and 2d pullet, 1st pen; Embden geese, 1st pair.

SO FIFTY SO

We have fifty Lt. Brahma, Partridge and Buff Cochins cockerels and cocks that must be moved. These are extra choice breeders and exhibition birds and will go at half their value. Prices \$2.50, \$5.00, \$7.50, \$10.00 and up. Send on your order or write for further particulars.

SURE HATCH, NEBRASKA.

That's what Clay Center should be
called!

Drop a letter in the mail box anywhere,
addressed just "Sure Hatch, Nebraska,"
and it will go to the Sure Hatch Incubator
Company, at Clay Center, as fast as steam
and steel can carry it.

Every railway mail clerk and every post-
office official through whose hands the let-
ter passes will know at once that its desti-
nation is Clay Center, Neb.

For the Sure Hatch Incubator Company
practically is Clay Center.

There is no other big industry located
there.

Nearly everybody in town works for the
Sure Hatch Incubator Company.

Its pay-roll keeps Clay Center going—
keeps its population happy and prosperous.
And Clay Center is proud of its famous
industry, proud of the splendid reputation
of the "Sure Hatch," proud of the men
whose genius and industry have made this
little town known and honored all over
the civilized world.

You can easily find out for yourself that
what we say is true.

If you are interested in incubators and
brooders, just drop a line to "Sure Hatch,
Nebraska," and say you would like to see
a copy of the new Sure Hatch catalogue.

You'll get it by return mail, without a
doubt.

And when it comes, you'll find it the
most interesting catalogue you ever read.

There's no other incubator catalogue like
it—none so chock full of interesting
and valuable information about incubators and
brooders, about the hatching and raising of
chicks for pleasure and profit.

Try it today—send a postal addressed
"Sure Hatch, Nebraska"—say you want
the Big Catalogue—see what happens!

THE "ORIENTAL LIMITED"

Train of the Great Northern Railway
Between St. Paul, Minneapolis
and Puget Sound Points.

This new train has been aptly named.
Travelers of this progressive age demand
the highest degree of comfort when they
are contemplating to undertake a journey,
and especially a journey of considerable
length. In the placing in service of the
"Oriental Limited," the Great Northern
railway has achieved a distinctive success
in the excellence, ease and elegance of this
regal train. If a man is making a journey
for purely business reasons, he wants com-
fort. The "Oriental Limited" lands him at
his journey's end with a pleasant memory
lingering in his mind of the comfort which
has been provided for him. All the con-
veniences of a modern, up-to-date hotel, all
the comforts of home, the privacy of a
club, are at his command. Instead dread-
ing a long journey he looks forward to it
with pleasurable anticipation. To the tour-
ist the same applies. The delightful sur-
roundings of this train, the opportunities
for enjoying the passing scenery en route
makes the "Oriental Limited" the train
that pleases.

SAND-PAPERING YOUR FACE.

You can get the hair off from your face
with sand-paper. Probably you will lose
the skin and a lot of bad language at the
same time. For the purpose of shaving,
common toilet and laundry soap is not
much better than sandpaper. The hair
comes off after a fashion, but your face is
left red, sore and irritated. For easy and
luxurious shaving you need a special soap.
Williams' Shaving Soap is made for the
face. Send to the J. B. Williams Co., Glas-
tonbury, Conn., for a free trial sample as
per their offer in another column. You
will see that there is as much difference
between real shaving soap and ordinary
shaving soap as there is between a Ken-
tucky thoroughbred and a truck horse.

The Prairie State Incubator Company,
Homer City, Pa., have just issued a very
neat 16-page catalogue on their "Prairie
State, Jr." machine. To meet the de-
mands for a medium sized incubator at a
moderate price they have perfected the
Prairie State, Jr., and will sell it on its
merits. This company is one of the old
established incubator manufacturers and
has a reputation for fair dealing, and we
have no doubt but what this new machine
will do as good work and prove as satisfac-
tory as the standard machine these people
have been putting out for many years. Send
for a copy of this catalogue and mention
AMERICAN POULTRY JOURNAL.

MICA CRYSTAL GRIT
DOES THE WORK

It is no experiment, having been
used successfully for twelve years and
is the highest grade article of its kind
in use.

Necessary proportion of mica, quartz,
iron, magnesium.

Regulates digestion by properly as-
similating the food, a process abso-
lutely necessary to health and produc-
tiveness in poultry.

Food not assimilated is food wasted.
Mica Crystal solves the problem and
makes the poultry industry profitable.

Without grit the feathered tribe
cannot be healthy or productive. This
is a well demonstrated fact in nature.
Ignorance of it has cost millions. Grit
is to fowls what teeth are to other
members of animal creation. Mica
Crystal never loses its sharpness. It
is the best.

Let us prove the truth of what we
say by filling a sample order for you.

DARLING & CO., Agents,
Chicago, Ill.

SINGLE COMB MINORCAS

BY S. A. McWILLIAMS, M. D.

This article is intended mainly to apply to Single Comb White Minorcas, while much that is herein written will apply equally well to the Black.

It is written mainly to enable the amateur to understand better, some of the requirements laid down by the American Standard of Perfection for this Breed.

It is well known that no breed, or variety, can excel them as egg producers, nor as layers of large white-shelled eggs, which often weigh as much as 6 to the pound, or nearly twice as much as Leghorn eggs.

As the comb is the first part of a Minorca male that attracts our attention, we will write of it first.

For our description, the comb consists of two parts, the spikes and the blade upon which they rest.

The comb should follow the curve of the head and neck, without touching the neck feathers. It should stand erect, without bending to either side. To do this properly it should be attached to the head by a broad, thick base.

From the sides of the comb, front or rear, there should be no growths or projections, such as warts, excrescences, side sprigs or tits, as they may disqualify.

As the front edge of the comb rises from the beak, it should be smooth and even, free from little spikes or tits.

The rear edge of the comb should not be split like a fish tail, nor should it have little spikes, projections or uneven elevations; it should be smooth and even.

The comb should be straight from the front to the rear, on top and sides, and should not be bent or twisted to either side; neither should its sides be indented or depressed or dished, with what is called a thumbmark.

Every comb is required to have 6 wedge-shaped points (neither more nor less); and to have the middle spikes the longest. All the spikes should show a gentle curve along the top, from before backwards, as if a curved line was drawn along the tips of the spikes.

The spaces between the spikes of either sex should be evenly and deeply notched like the teeth of a saw; such notches are called serrations.

The edges of each notch should be perfectly straight, as straight as the edges of the tooth of a saw.

The depth of the comb is made up of the spikes and a so-called blade, upon which they rest. The middle spikes should be of the same depth or length as the blade.

The head should be long and broad and thus provide a wide base for the comb, so that the latter can be carried erect and firmly.

The blade should be attached to the head by a broad base, so as to give a firm support for the spikes above.

The sides of the base should be straight, lengthwise and upwards, so as to be free from indentations or hollow spaces called thumb-marks.

The sides of the front of the comb in either sex should be free from ridges, indentations or twists.

The sides of the comb in either sex should be moderately rough in texture; not smooth, like the skin.

The front of the comb should rise from the beak at a point midway between the nostrils and tip of beak.

THE FEMALE MINORCA COMB.

The hen's comb is not fully developed until laying time, when no mistakes should then be made in the Standard shape of her comb.

When held erect, the shape of the comb should conform to the shape of the male comb.

It should be red, single, have six wedge shaped (not round, pencil shaped) spikes, separated by six wedge shaped, even serrations.

It is not expected that all the spikes shall be of the same length. The two middle spikes should be half the depth of the comb, and all the spikes should be evenly separated, and so curved that an imaginary line drawn from point to point of each spike would describe a nicely curved arch.

LOOP OF THE HEN'S COMB.

The loop on the front of a hen's comb should somewhat resemble the loop made in the string used to tie a person's shoe on the foot.

As the front of the comb rises from the beak, it should turn to one side, then curve over to the other side, before again curving back (together with the whole comb), to fall or droop well down, gracefully over either side of the head.

The curves should be high enough, strong enough, and wide or broad enough to throw the large, heavy comb far enough off from the side of the face to permit the hen to see perfectly in front of her.

I would suggest to the white Minorca clubs that they breed away from

USE THE CORNELL

and you will admit we have reached the ACME OF INCUBATOR PERFECTION. Our records prove it with 80%, 90% and even 100% hatches. THIS IS WHAT THE CORNELL CAN DO FOR YOU.

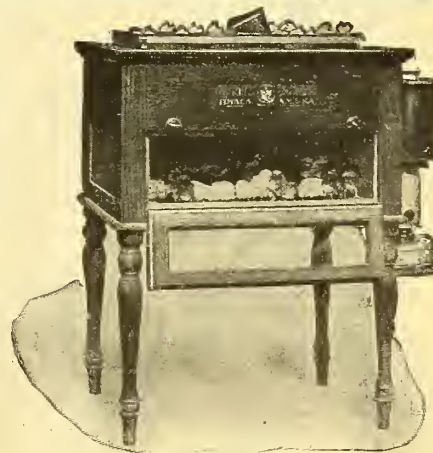

Stop and consider the increased profits derived from using DEPENDABLE CHICK MACHINERY. Decide this season to PURCHASE THE CORNELL—THE INCUBATOR OF QUALITY.

IT IS ABSOLUTELY RIGHT!

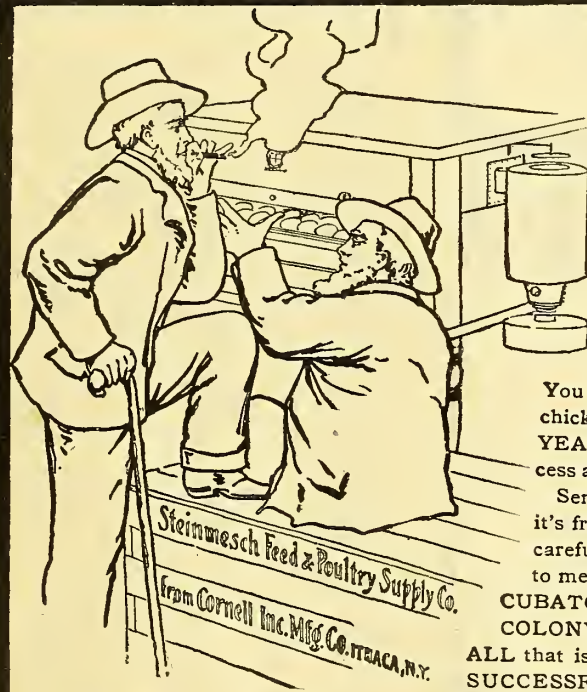

You should use PEEP-O-DAY BROODERS in which to raise your chicks. This is the only Brooder that has proven its worth by FIFTEEN YEARS of continued success and merit.

Send for our catalogue—it's free—and ascertain how carefully we have prepared to meet your wants in INCUBATORS, BROODERS, COLONY HOUSES, etc., and ALL that is NEEDED BY THE SUCCESSFUL POULTRYMAN.

If your dealer does not sell Cornell Goods, we send you direct from our factory subject to ninety days approval.

"THE CORNELL"

"I told you so
"It's packed right!
"It's made right!
"It does it's work right; it's the Incubator of quality."

**YOUR NEIGHBOR'S CHICKENS**

Look over the fence today and compare your chickens with your neighbor's. Purchase a package of **Tonic Poultry Food** and look over the fence in a week. There will be a mighty big difference in your favor between your hens and your neighbor's. It is a rapid conditioner for fowls. It is made especially to promote active digestion and assimilation. The egg-building ingredients in **TONIC POULTRY FOOD** are selected especially to immediately act upon the sensitive egg-forming organs and work with benefit to the whole structure of the hen's body. It contains the elements that make flesh, egg and bone.

TONIC POULTRY FOOD

is not injurious, but is vegetable and bone and makes fowls larger, promotes the rapid development of young chicks and helps to prevent and cure poultry diseases. Experienced poultrymen testify that it is a preventive of chicken cholera, roup, gapes, etc. **TONIC POULTRY FOOD** increases the winter percentage of eggs. Hens that usually lay from 12 to 15 eggs per month will increase the number to about 15 to 24. Cost per package 25c.

Tell us your problems—we will gladly instruct you promptly how to get finer flavored fowls and more eggs. At the same time we will send our free 48 page catalog. Write today. Address Dept. 10. Ask your dealer for Tonic Poultry Food. If he hasn't it, send to us. Souvenir calendar free. Agents wanted. Look for our Trade Mark on every package.

Johnson says to tell you that "Old Trusty" is the best, and he can prove it by his

40, 60 and 90 Days Free Test.

Here's the idea: Send for "Old Trusty." Run it through one hatch. Take 40 days to do it. If not certain of results, take more time—60 or 90 days, if necessary. After a fair and square trial, if "Old Trusty" fails to do what Johnson

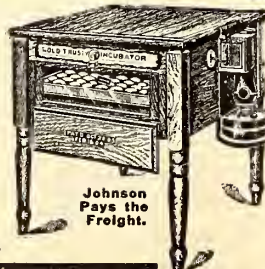

claims, don't keep it and cuss it, but ship the machine back, and you'll get your money—quick!

"OLD TRUSTY"

always hatches a high per cent, because it is built right to do the work. It's got 'em all beat on economical use of oil, rapid circulation of warm water, great heating surface in proportion to volume of water, and even distribution of heat to all parts of egg chamber. Deeper boiler and lamp improvements show 20% economy in oil over last year—35% over any other machine.

Johnson's New Incubator Book

proves why "Old Trusty" is the best hatcher on earth and tells how he knocked the spots out of high prices. Don't fail to read it. Over 100 pages of practical, common-sense stuff written by Johnson, himself, to help you chicken raisers out of your troubles. 300 illustrations that would tingle the blood of any poultry lover. Book is worth \$1.00. Free to you if you write for it—"Incubator Johnson"—care of

M. M. JOHNSON, CO.,**Clay Center, Nebraska.**

Johnson Pays the Freight.

the loop at the front of the Minorca hen's comb.

It causes to appear in the front of the male and female combs so many unsightly ridges that do not pay to breed out.

To remove the defect, borders on double mating and becomes too expensive to pay, although I have birds that are perfect in this section.

I would suggest that the standard for the front of a Leghorn comb be adopted, which says that the front edge of a Leghorn comb shall rise up straight, including the first spike, before curving over the face.

The edge of the front of the comb and of the rear of the comb in either sex should be slightly curved upwards, but without tit-like projections or elevations, or double spikes, or depressions, or slits of any kind.

Neither side of the comb in either sex should be hollow, or concave, or dished (so-called thumb mark), causing its opposite side to become convex, like the under side of a round dish.

S. C. WHITE MINORCAS.

In the white Minorcas the beak should be white, stout and fairly long.

In them the eyes should be orange red in color, full, bright, sparkling and expressive.

The face should be bright red in color without folds or wrinkles. Be on the lookout for white spees below or around the eyes, extending toward the ear lobes. If the face is pale in health, that face is likely to turn white. Avoid such.

The ear lobes should be pure white in color, of the shape of an almond shell or kernel, broad, flat, smooth, free from wrinkles or elevated folds.

They should be of fine texture, like that of a white kid glove, prominent and projecting beyond the surface of the face.

The wattles should be dark red in color, long, rounded at the ends and free from wrinkles or projecting folds.

We have an imported yearling male whose comb and wattles are large and in proper proportion. His weight approaches nine pounds; his comb is six inches long, straight as an arrow and its height is 3½ inches; his wattles are perfect, without a fold, crease or wrinkle and measures in length 4½ inches, in width three inches. They are thin, long and pendulous and well rounded at the extremities.

The neck should be long and nicely arched, with abundant hackle flowing well over the shoulders.

The breast should be full, round and prominent.

The keel or breast bone should be straight, not curved, crooked or twisted.

The body should be deep and long, and broad at the shoulders.

The back should be broad, flat, long and sloping evenly to the tail.

The tail should be full, broad, not pinched or close, long, and carried so low as to form an angle of 40 degrees above a line horizontal with the floor. In the male this angle applies to the tail feathers under the sickles, and not to the sickle feathers. These tail feathers should not stand erect, but be carried considerably behind a perpendicular, about half way between a vertical and a horizontal line.

If these tail feathers incline upward toward the back, so as to pass in front of a vertical line, then such tail is called a squirrel tail and the bird is disqualified for the show room.

The two long, prominent top feathers on a male bird's tail are called sickles, from their resemblance to an old-fashioned sickle cutting hook.

These two feathers should be long and well curved.

The color of the white Minorca feathers, clear down to the skin, should be white; not pure white like the snow, but as free as possible from creamy color of the quills, or brassy color of the plumage.

There should be no black feathers anywhere; nor should there be black or gray spots, or gray streaks, called ticking, anywhere on the webs of the feathers.

Look well and carefully for tiny little feathers or down on the legs and between the webs on the toes, as they disqualify.

The legs should be white or pinkish white, of medium length and stout.

The toes should be four in number, perfectly straight, not curved to either side, and well spread apart.

Weight of white Minorca pullets is placed at 5½ pounds and cockerels 6½ pounds, before they are one year old. The weight of hens is placed at 6½ pounds and cock birds at 8 pounds, after they are one year old.

Perfection in size, shape, color and carriage (in one) is not attainable in man or beast, neither can they be obtained in fowl.

Such birds as I have partially described are today worth \$100 apiece.

Man or fowl may be good, very good, in some sections of their make up, but never perfect in all.

In the show room every perfect bird is valued at 100 points. None ever reach it.

The judge cuts for some of the defects he finds in certain sections as follows:

In the Minorca combs he cuts and deducts ½ point, from the 100 points, for each spike on the comb that is more or less than the Standard requirement of 6 points.

For a thumb mark he cuts one point, for any bending of the comb one point, an absent sickle is cut one point, one point for the absence of a tail feather, one point for brassiness in each and every section, the same for creaminess of the quills in each section, one point for gray specs or ticks in each section, for white specs in the face one point, for down between the toes one point, crooked toes one point, crooked keel or breast bone one point, for absence of a tail or wing feather one point, eyes not reddish in color one point, red in the ear lobes covering less than one-third of the surface is one point, etc, etc. If more than ¼ of the surface of an earlobe is red it disqualifies.

The judge has the right to cut more or less severely than the above scale if he thinks best.

The latest 1905 Standard of Perfection lays down the rules that the judge should follow:

Black P. Rocks

Twelve years of scientific matings have produced a new variety, jet black, true Plymouth Rock shape. Scorings from Illinois and Indiana State Shows, 91 to 95 points. A desirable amount of stock for sale. Write your wants. Satisfaction guaranteed.

J. W. CREIGHTON - POTOMAC, ILL.
Sole Breeder and Originator.

RING'S WHITE ROCKS AND WYANDOTTES

Will put you to the front in any branch of the poultry business, as they have done with many others. They won **fourteen first prizes** last winter at Chicago, Detroit and Lansing. On five entries of White Rocks I won **four firsts at Chicago**, a record never excelled by any breeder of the variety at this show. The experience which enables me to breed stock of this quality is at your command in selecting show birds of winning quality, and breeding stock that will produce them from my flock of 1000. Snow birds up to weight. First-class breeders at reasonable prices. Send for free catalogue.

WING PIANOS

Are Sold Direct From the Factory, and in No Other Way

You Save from \$75 to \$200

When you buy a Wing Piano, you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many still do—at retail—you pay the retail dealer's store rent and other expenses. You pay his profit and the commission or salary of the agents or salesmen he employs—all these on top of what the dealer himself has to pay to the manufacturer. The retail profit on a piano is from \$75 to \$200. Isn't this worth saving?

SENT ON TRIAL

Anywhere We Pay Freight No Money in Advance

We will place a Wing Piano in any home in the United States on trial, without asking for any advance payment or deposit. We pay the freight and all other charges in advance. There is nothing to be paid either before the piano is sent or when it is received. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing, and are under no more obligation to keep the piano than if you were examining it at our factory. There can be absolutely no risk or expense to you.

Do not imagine that it is impossible for us to do as we say. Our system is so perfect that we can without any trouble deliver a piano in the smallest town in any part of the United States just as easily as we can in New York City, and with absolutely no trouble or annoyance to you, and without anything being paid in advance or on arrival either for freight or any other expense. We take old pianos and organs in exchange. A guarantee for 12 years against any defect in tone, action, workmanship or material is given with every Wing Piano.

Small, Easy Monthly Payments

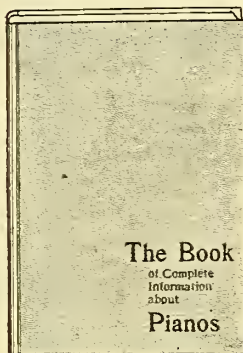

In 37 years over 40,000 Wing Pianos have been manufactured and sold. They are recommended by seven governors of States, by musical colleges and schools, by prominent orchestra leaders, music teachers and musicians. Thousands of these pianos are in your own State, some of them undoubtedly in your very neighborhood. Our catalogue contains names and addresses.

Mandolin, Guitar, Harp, Zither, Banjo—The tones of any or all of these instruments may be reproduced perfectly by an ordinary player on the piano by means of our Instrumental Attachment. This improvement is patented by us and cannot be had in any other piano. WING ORGANS are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

You Need This Book

If You Intend to Buy a Piano—No Matter What Make

A book—not a catalogue—that gives you all the information possessed by experts. It tells about the different materials used in the different parts of a piano; the way the different parts are put together, what causes pianos to get out of order and in fact is a complete encyclopedia. It makes the selection of a piano easy. If read carefully, it will make you a judge of tone, action, workmanship and finish. It tells you how to test a piano and how to tell good from bad. It is absolutely the only book of its kind ever published. It contains 156 large pages and hundreds of illustrations, all devoted to piano construction. Its name is "The Book of Complete Information About Pianos." We send it free to anyone wishing to buy a piano. All you have to do is to send us your name and address.

The Book of Complete Information about Pianos

Send a Postal To-day while you think of it, just giving your name and address or send us the attached coupon and the valuable book of information, also full particulars about the WING PIANO, with prices, terms of payment, etc., will be sent to you promptly by mail.

THE COMING OF THE TRAP NEST.

This is an age of progress. Old methods, old ways are constantly giving way to the new. The rural mail delivery; the rural telephones; the inter-urban; the automobile; the wireless telegraphy;—all are living witnesses to the progressive age in which we live. In whatever direction we turn, whatever profession we may enter, there we find the mark of the hand of progress, and woe to that person, whatever his calling, who does not recognize this progress and keep abreast of the times.

The poultry industry is not falling behind in the procession, by any means. The number and quality of the poultry journals; the long list of great poultry shows; the army of men and women engaged in poultry breeding; the great amount of poultry advertising; the vast number and kinds of poultry appliances;—all give testimony to the greatness and progress of the poultry industry. Though increasing at such a rapid rate, the supply of poultry and poultry products does not keep pace with the demand. Prices are steadily on the increase, and herein is the poultry breeders' greatest encouragement. The writer has heard his grandfather tell of selling eggs at 2c per dozen here in Illinois. Compare with this the present market prices of poultry and eggs and the breeders prices of \$1 per egg and \$1,000 per bird.

It is the purpose of this article to call attention to the trap nest as a vital need of the 20th century poultryman.

Every new method or new invention must pass through a period of criticism or probation and be thor-

oughly tested in its workings and results before it is accepted by the general public. The trap nest has been in practical use for several years. It has already passed through that period and is now being accepted by the breeders and the press as an essential to poultry breeding and is just entering upon a period of great usefulness and popularity. Each succeeding issue of the poultry journals contain more trap nest items; we see them on exhibition at our great poultry shows and the breeder is fast recognizing them as essential to success.

Why does the trap nest hold such an important place in the poultry world? The whole secret of its value is told in these words, "*It shows which hen laid the egg*". It shows just what each hen is doing. Perhaps a few hens of a flock lay most of the eggs. It picks out the 300 egg hen, the 200 egg, the 100 egg, the 50 egg, and the drone. It makes it possible to build up a good laying strain in a very short time. Feeding the drones is one of the greatest leaks with the poultryman.

It picks out the winter layers. A hen may lay well in the spring and summer, but stop when winter comes. With the trap nest a good strain of winter layers may be built up.

It enables one to get acquainted with each individual hen. The frequent handling, in removing the hen from the nest, tames her and it is the tame hen that is the paying hen. By frequent handling, the breeder will know when anything goes wrong with the hen, and remedy it.

It prevents egg-eating as the egg-eater is easily detected and killed.

The frequent handling and removing from the nest discourages broodiness.

It picks out the hen that lays the white egg, the brown egg, the yellow egg, the infertile egg. It may be that two or three hens of a flock lay most of the infertile eggs as has been proven by the trap nest.

It picks out the hen that raises the best chicks. Not always the highest scoring hen raises the winning chicks. With the trap nest a breeder can study the results of his matings with each hen. He may have a pen of ten hens and all the advantages of a pen of one hen. The trap nest is the only practical way that a breeder can pedigree his stock. The day is surely coming when poultry will be pedigreed as is other thoroughbred stock.

While most breeders prefer the incubator to the sitting hen, the trap nest comes as a boon to him who has the care of sitting hens. They may be placed in a building or yard away from the laying hens, removed once a day for feed and water, and when they return to the nest, they shut themselves in and the other hens out, so they cannot crowd on and break the eggs.

Trap nests have come to stay. They have been tested and their value demonstrated. The progressive breeder is welcoming them with delight as a most valuable aid in improving his flock, and the time is not far distant when he, who does not use them, will have very little demand for his stock.

F. W. MANN CO., Box 56, Milford, Mass.

farmer, to protect his grain and poultry from being destroyed by rats. Their work of destroying and clearing out rats is much more effective than that of a rat dog or cat, as ferrets can enter the rat holes, kill and chase out the rats.

To hunt rats, liberate the ferrets where the rats are working. They will soon enter the rat holes. Be ready with clubs to kill the rats which escape from the ferrets. After the ferrets have hunted an hour or two, pick them up and put them back in their pen. Give them a few such hunts and the rats will all leave.

Ferrets make fine pets. They become as playful as a kitten and can be carried in your pocket for chasing out rabbits.

They are easily cared for. A box three feet by four feet put in a dry place makes a good home for a pair of them. Bread and milk is a good food for them. They eat almost anything a cat or a dog will eat.

Ferrets are very prolific, usually raising two litters of young each year. These litters range in numbers from five to twelve.

There is a ready demand for these little animals and they bring from \$2 to \$3.50 each according to their age and the season of the year.

SAMUEL FARNSWORTH.

IS THE STANDARD ABSOLUTELY CORRECT.

I noticed in the JOURNAL'S issue of November, an article entitled "Before They Begin to Knock the Standard," by Mr. E. L. C. Morse. Now, my father was a pure blood man in his day and raised blooded Dorkings in the sixties. I am in the business and grew up with it, and can remember of many birthdays that the most prized present was a pair or trio of some full blooded fowls; so, I think, I am qualified to say a word or two in regard to Mr. Morse's article.

In the first place, is the business of raising poultry for profit, or for the show room alone? I believe 19 out of 20 will answer "for profit, of course," and the twentieth will say, "for both." Then, by following the last answer, you get into an argument as to whether the show-room should interfere with the market or not, and in all the cases that I have argued this question I got the answer, "The standard should be changed to meet the utility of the breed as the breed changes." Again, how many people would raise chickens to show for points alone, if there was no profit beyond the satisfaction of having a certain breed or kind perfect?

Now, I will state my own case. I have been raising, among other breeds, some light Brahmas for market and I got a freak hen a few years ago that weighed 11 pounds, but was nicely shaped and feathered. I bred her to a cock that was somewhat overweight, and produced some chicks that weighed a trifle over standard. I then started in to breed for early maturity, keeping the size, also. I have at present two pens of Light Brahmas, one of standard and one of my own, and my own are in shape and coloring of feathers up to the standard as much as any other pen, excepting size, but they will mature two and, in some cases, three weeks earlier than the

show pen, and weigh from a pound to two pounds more. I believe I can expect, with reason, to put a fowl on the market in two years that will mature as quick as a Plymouth Rock, and weigh from five to six pounds heavier. I think I am wrong. I do not believe in all breeds being bred to a larger size, for I think that the Mediterranean breeds would lose their egg laying capacity if so bred.

F. B. E. TAYLOR.

FAKED BIRDS IN THE SHOW ROOM.

BY REV. C. E. PETERSEN.

We have noticed of late that faking birds for exhibition is being advocated by some writers for our different poultry journals, and such articles given prominent place, instead of being kept out, as any such practice cannot be advocated, and certainly can only be detrimental to the breeding of fine poultry, and will make the thoughtful breeder and purchaser suspicious of show birds in general, and foster the idea in the mind of the amateur breeder that he who fakes best wins the most, which is not, by any means, true of the average fancier and exhibitor, who, generally speaking, are sportsmen enough to find no pleasure in the winnings of a bird that he knows stands a hypocrite in front of the judge, and for breeding purposes is valueless, because of some hidden fault or blemish in the blood.

Any such practices should and must be discouraged by any honest breeder, and no excuse offered can make the practice of faking right.

We have a standard and birds should measure up to the requirements there-

of, and if the requirements are such that they cannot be accomplished, then the standard should call for requirements that can be accomplished by the breeder.

There may be requirements for some breeds in the standard hard to accomplish, but not impossible, or even nearly so, as year after year, we can find high class exhibition specimens in the yards of our noted breeders up to standard requirements, and at a time of the year when these same birds were not fitted for exhibition. And let it here be said that fitting for exhibition is one thing and faking is another.

We well know that the standard calls for the birds to be shown in their natural condition, and that some breeders construe that so as to make it mean that even fitting would not be allowed, if the words were interpreted in their literal meaning, but that certainly is not so.

Take, for instance, a white bird. Now, we all know that for show purposes it must be cleaned and washed, so as to make it appear as it ought to appear before the judge. Is it natural to wash a fowl in soap and water? Does the fowl, in its natural state, resort to those means?

To this, I answer yes, as, when left to themselves, in a state of nature, they, like all other birds, manufacture their own soap out of grease, dust and alkali, and the rain does the rest, but when in the usual confinement, subject to conditions that can only make a dirty and unsightly plumage, the breeder steps in and does the washing so as to put that bird into a natural condition of cleanliness that is fitting.

But, if, on the other hand, this same bird should show a very pale leg color, where the standard calls for "bright yellow," and the owner, to help out

this defect, uses any preparation that will give the leg the color called for by the standard, that is not fitting, but that is faking.

Now, if a leg can be bred "bright yellow," then I say breed it so, and if that cannot be accomplished then strike it out, that is all.

We know that in old white plumaged birds the leg will not continue in its pristine yellow beauty, and, therefore, due allowance should, and generally is, made, by the judge.

Again, the standard calls for white plumage, with no black in any section, and if black feathers are found the bird will be disqualified, and rightly so. Now, a specimen might have a speck of black in the plumage, and otherwise be a splendid bird, the temptation comes, pluck it out, and undoubtedly this is done quite often, but it is faking, and not fitting. Such a bird might be used in the breeding yard to good advantage—though I doubt its value even there—but it is not fit for an honest exhibitor to show if he removes the disqualification. O! yes, I know well enough what some of the white plumaged bird breeders will say—that those beautiful whitest of the white birds will show the black specks in the plumage, and, therefore, the breeder takes it for granted that they are a necessity; yes, and they will continue to be a necessity as long as breeding from them is continued, and the same may be said of a good many more varieties where the skill of the owner is greater in faking than in breeding.

Absolutely nothing but rigid selection will perfect our different breeds, and as long as faking in the show room is advocated openly and tolerated by judges we are a long way behind in the much desired object of breeding true to requirements.

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. **STOCK FOR SALE both OLD AND YOUNG.** Illustrated circular free

DES PLAINES, ILL.

GONE HOME TO ROOST.

An announcement of more than ordinary interest to White Plymouth Rock breeders is that of D. T. Roots, Connerville, Ind., and U. R. Fishel, Hope, Ind.

Mr. Roots, of the May R. Poultry Plant, on October 8, 1905, sold to Mr. U. R. Fishel, Hope, Ind., his entire stock of White Plymouth Rocks, including his Pan-American, Cleveland, Chicago, Cincinnati, Indianapolis and St. Louis World's Fair winners. Mr. Roots, for a long time, has been a successful White Plymouth Rock breeder and an advertiser in AMERICAN POULTRY JOURNAL.

The heading of this article, "Gone Home to Roost," explains the situation very nicely in a few words, for Mr. Root's foundation stock of White Plymouth Rocks was originally purchased of Mr. Fishel and by Mr. Fishel's purchase of Mr. Roots' business this stock and strain is simply going back home to Mr. Fishel. It is a significant fact that Mr. Roots has been very successful in winning prizes on the stock that he originally purchased of Mr. Fishel. The sale consists of 4,000 birds, which added to Mr. Fishel's "Best in the World" gives him, without doubt, the largest and best flock of White Plymouth Rocks in the world.

In making this sale Mr. Roots recommends Mr. Fishel to all his old customers and to all who are in need of White Plymouth Rocks. His own dealing with Mr. Fishel and the fact that he has spent more money with him than any one man puts him in a position to know that he more than pleases his customers. In view of these facts, both Mr. Roots' ad in this issue and Mr. Fishel's ad will be especially good reading to all White Plymouth Rock breeders.

It is not out of place at this time to again note the great success of U. R. Fishel, who is known wherever White Plymouth Rocks are bred and in fact to all breeders of poultry in the country. He has a 120-acre farm devoted to this one breed, and with the addition of Mr. Roots' stock he now has 10,000 birds for his customers to select from. It is really only a few years since Mr. Fishel started in this business, but he has built up one of the largest and most complete poultry farms there is in the world, and his success is certainly a

stimulant and encouragement to those who are earnest in their endeavor to develop the poultry business and to place it on a high plane of business enterprise. His success is especially an encouragement to the beginner who may purchase from him, for no business of this magnitude could be built up to the point of success that it has attained without good business management and a conscientious and well defined plan of giving the best that can be had for the money.

Mr. Fishel's new 48-page catalogue is now ready and any reader of AMERICAN POULTRY JOURNAL sending three two-cent stamps will receive a copy of same by addressing U. R. Fishel, Box A, Hope, Ind.

WHITE LEGHORN CHICKENS.

A flock of pure bred poultry is always an object of particularly fascinating interest alike to the fancier and the amateur. A visitor to any of our great poultry shows is always delighted in seeing large numbers of splendid specimens of the various breeds which are on exhibition. We do not always realize the great amount of painstaking labor and the time which has been spent to bring these splendidly feathered beauties to such a degree of perfection. The prize winners, who carry off the blue ribbons in these contests do so because of the fact that they are the result of very careful breeding for many generations.

Poultry breeding has been developed along scientific lines to such an extent that our modern fancy and utilitarian breeds are the richest types of development in their respective classes.

Among the prominent breeders of this country who have become widely known for the excellency of their stock is Mr. S. E. Smith, of Norwich, N. Y. His specialty is Single Comb White Leghorns, and the product of his poultry yards are famous prize winners at all the leading shows where they are exhibited.

Single Comb White Leghorns are a favorite breed both among fanciers and market poultrymen. The birds not only have a showy appearance but are among the best producers of eggs and their flesh is fine flavored and excellent for table use. It is safe to say there are no better specimens of this breed to be found anywhere than those bred by Mr. S. E. Smith. Anyone

desiring to obtain either birds or eggs will do well to correspond with him. His address is Norwich, Chenango county, New York.

WAR ON INSECTS.

Although fly time is past, the necessity for exercising constant vigilance against the spread of vermin is still important. Mr. D. B. Smith, of Utica, N. Y., manufactures a line of sprayers which greatly facilitate a successful warfare against all such pests. His machine for spraying whitewash is certainly worth the attention of anyone who has use for such an article around poultry houses or other buildings. It provides a convenient and rapid method of applying the wash to every part of the structure in a most thorough and efficient manner. Anyone who is looking for a time and labor saver will certainly find it worth while to investigate this machine and to become familiar with its use.

Those who have used the Standard Fly & Lice Killer will appreciate the value of the Lightning Whitewash Sprayer, as it is called. Both of these machines are most convenient and useful appliances.

The Lightning Whitewash Sprayer can also be used for washing wagons, windows, etc. As it has considerable force and sprays twenty feet high, it may be used for spraying trees. The machine is nicely painted and has a neat and attractive appearance. Kindly mention this paper when answering Mr. Smith's advertisement, which will be found on page —.

A few years ago the plan of selling goods direct to the user at wholesale prices, freight charges prepaid, was not thought of. One of the first large concerns to adopt this plan that we can now think of was the Coiled Spring Fence Company, of Winchester, Ind. Ten years ago they started with a small capital, small factory and small business. Now they employ fifty-two people in their office, 150 people in the fence factory and 200 people in their wire mill. They sell fence on thirty days' trial, freight charges prepaid. It can be returned if not satisfactory. They say they can save anyone money on fence. It would be well for all fence users to write for their free catalogue, which fully describes their line and manner of doing business.

A Rare Opportunity for Fanciers

Desiring to devote more time and space to the development and perfection of my strains of Leghorns I have decided to offer for sale my entire flocks of

Partridge Wyandottes

Silver Penciled Wyandottes

Including all breeding pens, pairs, trios and single birds—reserving none; and if either variety is sold to one purchaser will sell also the name and good will of the **Cornell-Brackenbury-Wyckoff Strains**. Sale will include all of my **World's Fair prize winners**, all recent winners at Madison Square Garden, New York State Fair, Trenton Inter-State Fair and Hagerstown, 1905 Shows. These birds have a **world wide reputation** back of them.

I prefer to sell the flocks intact and will not consider offers for less than entire flock of either variety before Dec. 20, 1905. After that date, if flocks are not sold, will sell single birds, pairs, pens, trios or any combination. No better opportunity was ever offered to the fancier for obtaining a national reputation in poultry from the outset.

E. G. WYCKOFF

Box 106 C, Ithaca, N. Y.

**AT THE GREAT EASTERN SHOW,
NEW YORK CITY, NOV. 13-17,
1905.**

At this show White & Goodacre, of Watchung, N. J., the Orpington specialists, made a grand record on their birds, winning on their American-bred birds the following: 1st and 2d on S. C. Buff pens; 1st on R. C. Buff cock; 1st hen any other variety; 1st pullet any other variety; 1st and 2d S. C. Black pens; 1st S. C. White cock; 1st cockerel any other variety; 1st pen any other variety, and a number of specials.

These people are in a position to give their patrons and intending purchasers the best that is to be had in Orpingtons. They have a large number of very fine Buff cockerels now ready to ship, and as they send out only the best and at very reasonable prices, considering quality, our readers should correspond with them and get one of their handsome catalogues, which is free if you mention AMERICAN POULTRY JOURNAL. Their ad will be found elsewhere in this issue.

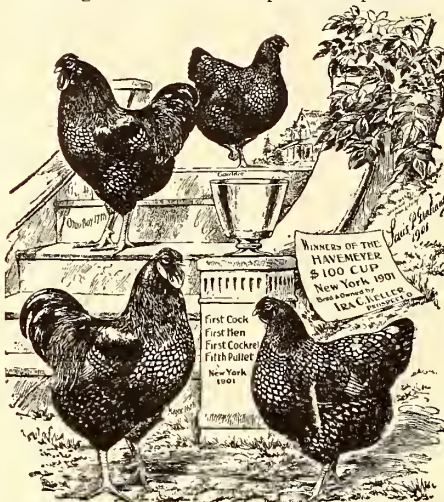

OLD INDIAN FASHIONS.

The American Indians used to grind their corn by pounding it between two stones. This work fell to the women. An up-to-date farmer would laugh at such an old-fashioned mill—would not have its primitive methods on his farm. Indians had no way of skimming their milk except to let it stand in something until what cream would rise came to the top. The women did the skimming as well as the milking. Of course, they lost sometimes as much as half the cream by such an unscientific method.

Some of the very farmers and dairymen who would laugh at an Indian mill are skimming their milk—and losing half their cream—just as the Indians did. Modern methods of skimming are as far ahead of the old method as modern mills are ahead of Indian grinding stones. The up-to-date skimming machine is the Sharples Tubular Cream Separator. It often doubles your dairy profits—skims the milk as soon as drawn from the cow—leaves fresh warm skim milk for young stock—requires that only the cream be put away. In use from

Maine to California—and far ahead of pans or cans. Ask the Sharples Separator Company for their plainly written, fully illustrated catalogue No. R. 205. Address them at West Chester, Pa., or Chicago, Ill., or Toronto, Can. They have large offices at each place.

Darling & Co. of Chicago, Ill., with a branch house at Long Island City, N. Y., are sending out their new poultry supply catalogue. This is a splendid specimen

Four Golden Wyandottes bred and owned by Ira C. Keller, Prospect, Ohio, that won the \$100 Havemeyer cup at Madison Square Garden for the four best Wyandottes in the show, all varieties. Also winning first cock, first hen, first cockerel and fifth pullet.

of printers' art as well as being a most complete catalogue of almost every possible want of the poultry raiser.

It is, no doubt, well known that Darling & Co. is one of Chicago's largest business houses, and when these people

take hold of any enterprise no money or pains is spared to give to their customers the best there is at the lowest possible price. For that reason the AMERICAN POULTRY JOURNAL readers will find this new poultry supply catalogue one of the most complete and attractive that has ever been sent out. Every possible want of the poultryman is supplied and the arrangement of the catalogue is such and it is so well illustrated with every poultry appliance that the buyer can quickly and intelligently make up an order for supplies, securing all that he needs with the least possible effort and at prices that make it of especial advantage to trade with these people.

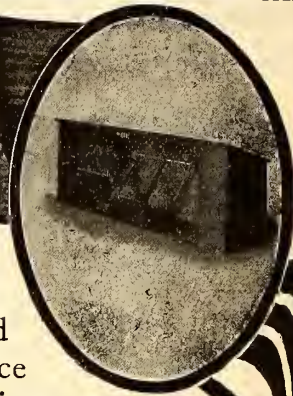

Geo. M. Kline of Downers Grove, Ill., has some White Wyandottes that are correctly bred, and are ideal in shape and color and absolutely white. Mr. Kline has bred these for good layers, and stock of his breeding has scored 96, having won at Chicago, Minneapolis, Naperville, Rockford, Princeton, Downers Grove and elsewhere since 1896. This excellence has come about through intelligent study of this variety by Mr. Kline for thirteen years.

In ordering stock from Mr. Kline he asks that you describe plainly what you desire and he knows that the price will be satisfactory, and that you will get full value received. He has now for sale several cockerels, but only a few females. Special egg orders should be booked now for future delivery, as the price is cheaper now than it will be later on, and his eggs are sold with a positive guarantee.

Mr. Kline is selling out his Bradley Barred Rocks, and has some especially fine cockerels, some of them having scored over 93 last year.

Mrs. A. J. Colvin, of Pearl, Ill., has for sale some excellent Barred Plymouth Rocks sired and grand-sired from first prize pen, and males at Madison Square Garden and Boston.

She is also having great success with her Bronze Turkeys, sired by Tom, weighing 40 pounds and a 45-pound grand-sire. She will be glad to correspond with any American Poultry Journal readers in regard to prices for both Barred Plymouth Rocks and Bronze Turkeys.

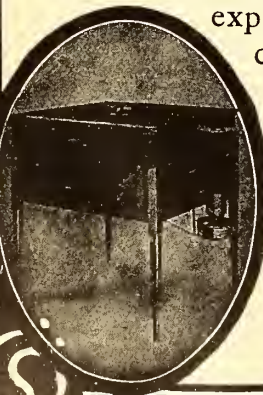

Can I help you to mature your plans for next season's poultry work? Is your laying stock properly housed to remain healthy, and are your feeding methods such as to produce profitable results? Are you going to rear any winter

Broilers or Roasters? There is money in this if handled right. I can tell you of methods that will produce profitable results. Simple methods that the beginner can follow with success, and methods that may help you—the experienced breeder. If at all in doubt on any point in poultry culture, tell me your plans and let me advise with you. If you contemplate the purchase of an incubator or brooder, do not fail to investigate the merits of the MODEL. They are high-class machines for practical work, and are guaranteed to give satisfaction. Catalog mailed upon request.

301 Henry Street, Buffalo, N. Y.

A COMBINED COOKER AND WATER HEATER

for practical poultrymen. Breeders everywhere recognize that cooked food makes quicker, earlier growth and larger size. This cooker is

\$5

A MONEY SAVER

It's built to give lasting satisfaction. Has No. 14 heavy galvanized steel boiler on cast iron base, burns either wood or coal—all parts separately cast. 20 gals. \$5; 35 gals. \$8; 50 gals. \$10; 100 gals. \$12. Send for our new, free catalog of cookers and other poultry supplies and appliances at money-saving prices.

Reliable Incubator & Brooder Co., Box A 1, Quincy, Ill.

\$4.88

By selling Gem Incubators and Brooders direct from our factory to you we save you the agent's big profits. That's why we can sell you the best incubator built—the

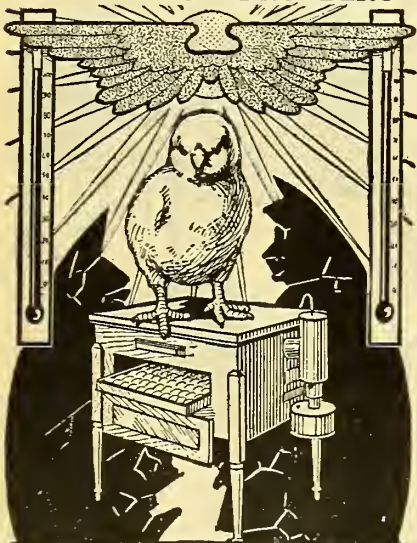

GEM INCUBATOR

for from \$4.88 up. You know what the GEM is—it's a proven hatcher, well built and guaranteed. Has a Removable Chick Tray and Nursery and many other desirable features not found in any other. Our catalog will save you some money if you are going to buy an incubator. Write for it today.

Gem Incubator Co., Box B, Trotwood, O.

The Mandy Lee INCUBATORS AND BROODERS

Almost all incubators hatch well sometimes—when outside conditions are favorable. But that's the trouble. Ideal hatching conditions seldom exist, which explains why one hatch is satisfactory and the next a failure. In the

"Mandy Lee"

all this is changed. Heat, ventilation and moisture—the three essentials to a successful hatch—all work together in harmonious combination, and are under PERFECT and SEPARATE control of the OPERATOR ALL THE TIME. You can make favorable conditions in The "Mandy Lee" when outside conditions are UNFAVORABLE. That's why it's the "perfect" hatcher any time or any place, and peculiarly adapted for success in the South.

New catalog tells how and why. Write for it today. New sizes, new prices. Our DIRECT CONTRACT HEAT CHICK Brooder was a winner from the start. It's "all there but the cluck."

Geo. H. Lee Co.,

1191 Harney St., Omaha, Neb.

A GREAT SALE OF BUFF LEGHORNS.

DILLSBURG, PA., Nov. 17, 1905.

This is to certify that we have sold to H. S. Smith, of Panawawa, Wash., 200 Buff Leghorns, the cream of our flock, including every St. Louis World's Fair winner we had or sold to anyone. Besides these, in yearling birds we sold him cocks and hens far better in quality than the World's Fair winners, and in cockerels and pullets by far the best lot we ever owned. Our honest opinion is that Mr. Smith now owns the most valuable flock of Buff Leghorns in the world, and as we believe that Mr. Smith is a man of honesty and integrity, we would refer all our customers to him.

ATG. D. ARNOLD.

Mrs. U. R. Fishel, Box A, Hope, Ind., resumes her Bronze turkey advertising in this issue. Mrs. Fishel writes that she has reared this season more and better Bronze turkeys than ever before.

At the great St. Louis World's Fair, her turkeys won 4th Old Tom; 1st, 2nd, 3rd, 6th and 7th Young Tom, 1st, 2nd, 5th and 6th Hen, 1st, 4th, 5th and 7th Pullet, and Silver Cup for best display in competition with the best Bronze Turkeys in the world. There never was such a display of Bronze Turkeys as was shown at St. Louis.

At Madison Square Garden, New York, 1905 she exhibited eighteen birds winning eighteen prizes: 2 firsts, 5 seconds, 6 thirds and 5 fourths. These winnings are undeniable proof regarding the excellent quality of her turkeys.

She has something like four hundred for sale, including splendid breeding Toms, both old and young, pairs, trios, breeding flocks and exhibition birds. If you send a 2-cent stamp to the above address, she will send her Turkey Catalogue.

Ira C. Keller of Prospect, Ohio, writes that he has the finest lot of young and old birds to spare this season that he has ever offered. His White Wyandottes are white with neat small combs, good legs, splendid shape and bay eyes, and he has the size. His Golden Wyandottes are wonderful in lacing that meets the new Standard, large oval lacing and wonderful color. He recently exported three consignments of Golden and White Wyandottes to Australia and two to New Zealand. His birds are of rare quality and sell at long prices.

Wilber Bros., of Petros, Tenn., won at the Alabama State Fair Poultry Show, October 21-26, 1905, as follows: Single Comb White Leghorns—1st cockerel, 2nd pullet, 2nd hen and 1st pen; F. J. Marshall, judge. The judging was by comparison and the new Standard used. The competition included exhibits from Alabama, Georgia, Mississippi, Kentucky, North Carolina, Tennessee and Ohio.

J. A. Leland, of Springfield, Ill., writes us that he is making a special offer of good strong Rose Comb White Leghorn cockerels for sale at about half their value to move quickly, as he needs the room for his pullets. He has just sold the first prize cockerel at the Illinois State Fair to an old customer at Pontiac, Ill.

B. M. Billings, of Oberlin, Ohio, breeder of White and Golden Wyandottes and Rhode Island Reds, writes that he has the finest lot of young stock as to quality that he ever raised. He has now, November 1st, cockerels up to weight and fit to win in strong competition.

At Lorain County Fair, held at Elyria, Ohio, he won every first on Rose and Single Comb Rhode Island Reds and first cockerel Golden Wyandotte and first pullet and second hen White Wyandottes.

J. A. Leland, of Springfield, Ill., won at the Illinois State Fair, 1905, on his Rose Comb White Leghorns as follows: 1st, 3rd cockerel, 3rd pullet, 3rd hen, 2nd pen, in strong competition.

Burton J. Holt of Pleasantville, Iowa, will on Jan. 1, 1906, take entire management of the Hunky-Dory Poultry Farm at Pella, Iowa, in which he also has an interest. They will breed White Plymouth Rocks exclusively.

Clement & Fike's White Wyandottes are gaining prestige not only in this country, but are gaining widespread reputation in foreign countries, having recently sold a high grade pen to a noted foreign prince.

40 BREEDS Fine, pure bred chickens, ducks, geese and turkeys, northern raised, hardy and very beautiful. Largest poultry farm in the Northwest. Fowls, eggs and incubators at low prices. Send 4c. for fine 70-page, 11th annual poultry book. R. F. NEUBERT, Box 84, Mankato, Minnesota.

LIGHTNING WHITEWASH SPRAYER NO. 28 Whitewash your poultry houses and stables easily, rapidly, with the "Lightning" Whitewash Sprayer. Kills lice and vermin. Can't clog. Also for spraying trees, washing wagons, etc. Double action pump. Sprays 30 ft. high. Has 3/4 in. heavy valves. All brass, \$3.50; Galvanized Iron, \$2.50. Cash with order. Exp. paid. Agents wanted. D. B. SMITH & CO., UTICA, N. Y.

300 BUFF ROCKS

I have that many choice "Nuggets" for sale this season, as I will not show this year. If you want winners or breeders I can fill the order. Largest winner at World's Fair, also State Cup winner. Satisfaction guaranteed.

THE PRACTICAL TRAP NEST.

This nest is manufactured by the Wiseacres Poultry Farm, Croton-on-Hudson, N. Y. It is simple and cheap, and as the name implies, practical. By the use of trap nests you are enabled to keep an accurate record of the number of eggs each hen lays and also to tell the exact breeding of each specimen. Trap nests are coming into universal use and any of our readers who are contemplating purchasing trap nests should write Wiseacres Poultry Farm, Croton-on-Hudson, N. Y., for circular and prices.

The International Stock Food Company is coming to the front this year with an incubator and brooder that is bound to attract the attention of every practical poultryman in the country. For years it has been considered to be an impossibility to construct a square or oblong incubator and have an equal temperature in the corners, sides, ends and center, the same being taken from flat trays. The manager of their poultry supply department, Mr. N. C. Sprague, has been experimenting for the last ten years for overcoming the difficulties experienced by every other manufacturer. It now seems that success has crowned his efforts, for he has succeeded in building a hot-air machine that, under severe tests, proves that the temperature problem has been solved.

Mr. Sprague is not satisfied in telling of his achievements, but he demonstrates to interested people the fact that his claims are well founded. Together with overcoming the unequal heat problem, he has also gone quite deeply into the question of proper ventilation. The International Stock Food Company has issued a very valuable catalogue describing Jewel Incubators and Brooders, in

which will be found a very interesting and easily understood discussion on the question of ventilation.

This firm has a world-wide reputation for doing things right, and we confidently expect to see their line of incubators and brooders force themselves right to the front. The principles involved are of the greatest importance to every practical poultryman. Mr. Sprague's thorough knowledge of the subject of artificial incubation places him in a position for solving the questions that have been trying and perplexing in years past. We understand that Mr. Sprague has a few more surprises in store for the public, and our readers may expect to hear from his work almost any time. Experienced incubator operators are bound to appreciate the value of the new discoveries that will from time to time come from Mr. Sprague's work rooms. The International Stock Food Company carries a very large line of supplies, and our readers should have their catalogue. When writing for it, be sure to mention this paper.

Questions and Answers

Questions asked by subscribers will be answered in this department.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your next issue how to select Barred Plymouth Rock breeders for a cockerel mating, for pullet mating, also how to mate to produce both cockerel and pullets of good quality.

W. F. A.

Reelsville, Ind.

Answer:—We cannot answer questions of this character in this department as it would take too much space. Articles explaining these points are published from time to time.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you kindly answer in your "Question and Answer Department" the following: I am going to move during the winter from a flat to a house where I will have about 25 by 50 feet of ground to keep poultry. Which breed will do best on a small piece of ground like that? How many can be kept profitably on such a plot?

Does a difference in color in the Wyandotte make any difference in their laying quality?

R. D. H. D.

Hackensack, N. J.

Answer:—Any of the American class,

such as Rocks, Wyandottes, etc. About 50 fowls will be enough on this amount of space. The color of plumage has nothing to do with the laying qualities.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—As I am a reader of your valuable journal, would like to know the standard weight of W. & B. Minorcas, also R. I. Reds. I have raised a few of these varieties this year but do not know the standard weights of them. A. E. W.

Minneapolis, Minn.

Answer:—Minorcas—cock, 9 lbs.; hen, 7½ lbs.; cockerel, 7½ lbs.; pullet, 6½ lbs. R. I. Reds—cock, 8½ lbs.; hen, 6½ lbs.; cockerel, 7½ lbs.; pullet, 5 lbs. For S. C. White and Rose comb Black Minorcas, the weight is one pound less.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I would like to have your opinion in "Questions and Answers" to the following:

I had a nice 5-months old W. Wyandotte pullet seemingly in good health, and one morning shortly after leaving the roost she appeared to stumble in her

haste to reach the feed-trough, and apparently lost control of her legs. At noon she was still lying in the sun and when I went to catch and examine her she floundered around and turned a complete somersault. I gave her a dose of castor oil, but she didn't improve, so I used the axe on her. A post mortem revealed all the organs in splendid condition, but at the top of the heart were 8 or 10 small clots of dark blood, each about the size and shape of a kernel of wheat and hardened. What was the disease, and what the cause.

J. J. F.

Ypsilanti, Mich.

Answer:—The fowl had evidently been injured in some way, which caused the blood clots around the heart and which brought on the condition you describe.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following questions in your next issue: 1. I killed a hen a short time ago and found eggs in her about as big as a pea and smaller. How many weeks before she would lay if I had not killed her? 2. As I am going to keep full-blooded stock is this the time to kill the mongrels?

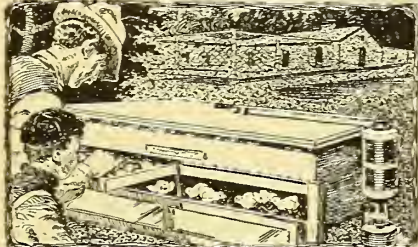

Plattsburgh, N. Y.

E. M. C.

Answer:—It is impossible to tell how long before she would lay. She might lay in two weeks and maybe not for two months. Much would depend on feed and care given. 2. Yes.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Would you please publish in your next issue what this trouble can be: I have two S. C. B. Minorca pullets that have eruptions on their heads right at the base of the comb and on the base

THE

American Incubator

is the hatcher you want because it is built to hatch more and stronger chicks than any other machine made. We have no fine spun theories to tell you about, no marvelous inventions—nothing but simple, practical hatching features. Your one aim is

PROFITABLE RESULTS

and we guarantee that you can get these results quicker, easier and with more certainty with an American Incubator than any other machine.

Because it keeps the eggs that are put into it just at the right temperature all the time, day and night, week after week. It can do that because it has the best lamp and heating system ever devised. It has five thicknesses of wall so that no heat can escape and it has an automatic regulator that really does regulate. It has the only ventilating system that supplies the egg chamber with fresh air constantly without cooling the eggs.

Sold at Lowest Prices on 90 DAYS FREE TRIAL

because we know that it will more than fulfill our claims. Construction, material and workmanship, all illustrated and described in our

LARGE FREE CATALOGUE.

Sent postpaid on request. It is full of just the information you need to succeed. It lists our complete line of poultry supplies.

AMERICAN INCUBATOR COMPANY,
10 Mrs. St., Freeport, Illinois.

To Raise Chicks for Profit

get right down to a business basis at the start and buy the incubator that will give you the best returns for your money.

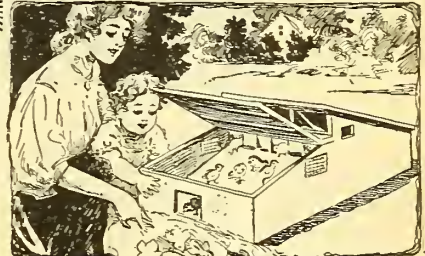

Don't be influenced by theory, don't consider appearances, don't look to anything but Results. The all important thing is to get the machine that you can control, that you can depend upon in the way of keeping the temperature in the egg chamber at exactly the correct point, not too hot or too cold. And see that ample provision has been made for thorough ventilation along natural, common sense lines.

You can't fail to succeed if your machine is right in these two features.

The same principles apply to brooders, only more. In a brooder you've got to consider roominess and cleanliness as well as heat and ventilation.

Read the description of the American Incubators and Brooders on either side of this column. Notice the experience that has been put into them. Above all things, notice the guarantee that goes with them, which is backed by the great factory and all the capital of the manufacturers. That protects you against loss, disappointment, discouragement. Now, from a businesslike standpoint, looking at it from a dollars and cents point of view: can you afford to speculate or experiment when an absolute certainty like this offer comes your way? We leave it to your good judgment.

Send for the book which will put you on the right track regarding all poultry matters. It is sent free, postpaid, to all those interested.

The American Brooder

Raising the chicks you hatch is where the big end of the profit lies. Put them in an American Brooder and raise them all. It is guaranteed to raise a larger per cent of strong, vigorous chicks than any other brooder and you can be the judge.

Sold on 90 DAYS TRIAL,

and if it is not perfectly heated, regulated, ventilated, roomy, convenient and economical of fuel, send it back and get your money. It is heated by hot air, the only natural, safe way and the heat circulates from the top down to the chicks as nature intended. No crowding, no tramping. Two compartments—a hatching and exercising room. Opens from the top, easy to clean and proof against dampness and vermin.

American Incubators and Brooders grew out of 29 years of practical experience in hatching and raising thoroughbred poultry. We are still in the poultry business, operating the largest thoroughbred poultry plant in the country.

Send for free catalog of incubators, brooders and thoroughbred lowls and eggs, illustrating and describing everything the poultry raiser needs at very lowest prices.

AMERICAN INCUBATOR COMPANY,

of the comb, also on eyelids. Inclosed drawing will show where the eruptions are located. The lower end of the wattle is swollen and looks rough and puckered. Their faces are also swelling. Their eyes are watery and their combs and faces are losing color. Hoping this is sufficient explanation for an answer, I remain,

Milwaukee, Wis. M. F. A.

Answer:—Chicken pox. Read answer to H. O. C. in this issue.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I would thank you to answer the following questions in your next

too small or too narrow perches, which compel the fowls to grasp them tightly in order to maintain their position. This firm grasp continued night after night affects the circulation of the part of the foot that comes in contact with the perch. More or less irritation and inflammation is set up and results in swelling and thickening of the skin. This same condition may be produced by birds jumping from high perches onto a hard floor. The perches should be broad and flat and should be placed at a proper height from the floor. The affected birds should be treated by paring off the thick-

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please tell me in your next issue of journal what is the matter with my chickens, the cause and remedy. Have always prided ourselves on our flock being free from disease and lice, but within last week or so there has appeared among our half-grown chicks (no old ones have it) a disease which we have never seen or heard of before and cannot find any one so far who can help us out. It seems to start either in front or back of eye, with a hard, dry scab appearing lump about the size of a pea, and in one or two days' time will be

Ira C. Keller's (Prospect, Ohio) first prize White Wyandotte breeding pen at New York.

issue. I recently purchased a trio of S. C. Black Minorcas, all of which have a large corn on the bottom of their heel. What is the cause of this and what should be done to remove these corns and how long will it take? Would this affliction bar these birds from a show room? What is an effective remedy for sore head?

Marshall, Tex.

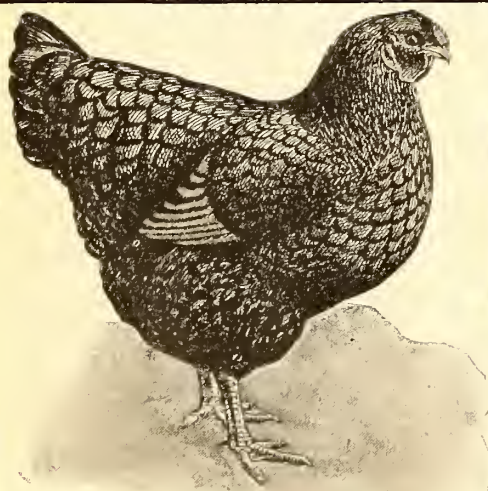

J. S. M.

Answer:—Corns are usually caused by

ened epidermis, without causing bleeding, and applying boric acid ointment or painting the part with tincture of iodine. This would not bar them from a show, but the judge would probably cut them pretty heavily. The application of sulphur ointment twice a day will generally effect a cure in sore head in a short time, and is considered one of the best and cheapest remedies.

swelled out as large as half the size of the head, the eye bursting and the opening being the outlet of a thick, dry sort of pus; does not run out, just seems to grow out of eye opening.

We take all we see get it and grease them with carbolated vaseline and keep them from the other chickens. They get well in a few days but only have one eye. Those we have noticed in the first stages

COMING EVENTS!

If you want to be among the winners at the leading shows and feel sure you have the kind that will win, let me have your order.

I have succeeded in raising more good birds this season than ever before, and I can furnish winners for any kind of company, also line-bred breeding birds that will produce high-class youngsters. I have for sale something over 2000 Silver, Golden and White Wyandottes, G. S. and S. S. Bantams. No use to look for better, they don't grow them. If you only knew just how many of the BIG SHOW winners came from my yards each season you would then be convinced that

JONES, THE WYANDOTTE MAN

furnishes the foundation of more good flocks than any breeder IN THE WORLD. That is why my STRAIN is conceded

THE STRONGEST BLOOD LINES ON EARTH

No use for me to try to tell you here how many times they have won and at how many national shows. It would take half the pages of this journal, but send four cents in stamps for my handsome 36-page catalogue, printed in colors and containing many half-tones of the best Wyandottes that ever lived; full of valuable information on feed, care and how to mate for best results; a book worthy a place in any library. Don't fail to get a copy.

Imported and American Bred Scotch Collie Dogs

R. F. D. 5, PADUCAH, KY., U. S. A.

and have used vaseline on would not have the swelling, but in two or three days the hard dry scab would come off. This does not affect their eating in the least, as they eat quite heartily. Our chickens have a run of 75 by 150 feet. Have a warm dry place to roost which we clean every week and fumigate quite often.

We feed corn, whole and cracked, oats, wheat and barley, and a hot mash three or four times a week made from peelings and scraps from table cooked and thickened with bran. What is the matter with them and what causes it, as I want to remove the cause if possible.

Morgan Park, Ill. A. J. M.

Answer:—Your fowls have chicken-pox, which is further aggravated by the fowls getting a severe cold. When fowls get in the condition you describe it is better to cut their heads off. Chicken-pox itself is easily cured. Place the afflicted birds in a warm dry room and wash the affected parts with warm, soapy water until the crusts become soft and can be removed without causing the blood to flow, after which dry thoroughly with a soft piece of flannel; then apply carbolated vaseline or sulphur ointment. Two or three treatments of this character usually effect a cure. In order to thoroughly stamp out this disease you should disinfect your yards and houses with a 10 per cent solution of carbolic acid.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Our chickens are sick; and as we have tried almost every remedy we have heard of, and still they are sick, I will ask you for your opinion and advice. The disease commenced in August 3 years ago and we have had it later each year since. It lasts about two months. This year, about three weeks ago it commenced. They have colds in nostrils and eyes—white, ropy stuff, smells bad; eyes swell; knots on head, sometimes; then they have yellow sores in corner of mouth, in throat and windpipe; then they have sores the size of a pea on comb, gills and head, rather dry and hard. Of the first two they often get over, but canker seldom. When we first had it our chickens roosted in open sheds and house of boards and lots of cracks. Those that have it once never have had it again; we have tried to keep everything sanitary about the place.

Please advise us as to cause and remedy. H. M. H.

Norman, Okla.

Answer:—The hatchet is the only remedy we can recommend for your fowls. You have kept on year after year breeding from diseased fowls and have weakened the constitution of your flock to such an extent that the least change in the atmosphere causes them to take cold and this rapidly develops into roup and kindred diseases. Our advice is to market every fowl that does not show signs of disease and to kill and burn

First cockerel and first pullet, Detroit, 1905. Bred and owned by H. H. & E. M. Coburn, Memphis, Mich.

all those that are diseased. Then thoroughly clean and disinfect all your houses and runs and then procure entirely new blood and start all over.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you kindly answer these questions in your next issue and oblige? I have some early hatched Leghorn Pullets that have been laying for two months, and the last week I have been working around their house until noon every day, and the second or third day they quit laying. I only get one or two eggs now. Do you think my disturbing them was the cause for their stopping

and do you think they will start again this winter? I have noticed one of these same pullets pass four worms 3 or 4 inches in length, about the size of a knitting needle and white. What is the cause of this and is there a remedy for it? I consider these pullets have had the best of cars. J. B.

Waukegan, Ill.

Answer:—We do not think that your working around the house caused the pullets to stop laying, although if you had occasion to move them from one pen to another that would probably stop them for a few days. They will probably start laying again in a short time. Worms are usually caused by the feeding of too much meat. A few drops of turpentine usually cleans worms out in short order.

Editor AMERICAN POULTRY JOURNAL.

Dear Editor:—Will you please inform me through your Question and Answer columns the color of Partridge Cochins when first hatched? Are they brown all over, or do they have two stripes of brown on back same as Brown Leghorns? R. H. A.

Belchertown, Mass.

Answer:—When hatched Partridge Cochins resemble Brown Leghorns, except they are of a lighter shade.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in next issue of AMERICAN POULTRY JOURNAL—1. Which make the best broilers, White Wyandottes or White Plymouth Rocks? 2. I would like a rat proof floor in my poultry house. Which would you advise, cement or boards? F. A. M.

Du Bois, Pa.

Answer:—1. There is very little to choose between the two breeds. 2. Cement is the only rat-proof floor obtainable.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer these few questions in your next issue: 1. What is the cause of hens making a piping noise, and they also make a noise as if it was hard to breathe, and sometimes they run away from their feed. 2. Does milk have the effect to keep them loose, and is milk sour or sweet as good as beef scraps where they are out and have plenty of grass and grit? 3. What is

A JEWEL

THE FIRST OF ITS KIND

For the first time in the history of Incubator building has it been possible to build a square machine with FLAT TRAYS and have an equal temperature in the CORNERS, ENDS, SIDES and CENTER.

THE JEWEL DOES THE TRICK.

Ventilation under the control of the operator every moment. Safe and perfect regulation. Improved nursery and every convenience necessary to do successful work.

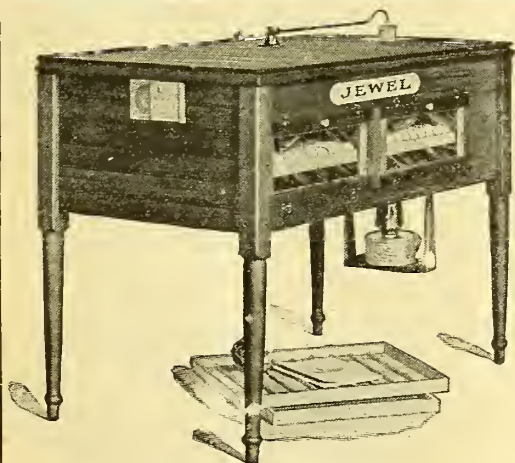

THE JEWEL IS THE GREATEST TRIUMPH IN INCUBATOR BUILDING.

The most successful and easiest operated machine known. The Jewel hatches big, strong, vigorous chicks, the kind that delights the poultryman's eye.

50 GOOD HENS

are better than 100 of "fair average." In every 100 there are many only average and some very poor layers. Why keep them? It's feed and care wasted. Put good layers in their place. Just as easy to have all profit makers.

The Walter Hogan System

is to the poultry business what the Babcock Milk Tester is to the dairy. You can select every good layer and detect every poor one. Choose cocks that will breed good layers. A perfect system of selection and breeding evolved through many years study and experiment. Any one can apply it to his own profit in his own business. No cost if you find it not satisfactory. Write for particulars.

THE WALTER HOGAN COMPANY, 17 Nat'l Bank Bldg., Fergus Falls, Minn.

the cause when their combs turn purple and they die? Is there any remedy? 4. Do we feed right? We have 100 chickens and fowl. We feed for morning 3 quarts of oats and wheat mixed; at noon we give the chicks two quarts of food, as a mash, but not to the hens; at night we give them all corn. Twice a week we give the hens a little over a quart of food in the morning. Is that enough to help them lay, as they are about through molting? 5. How much should a Wyandotte cockerel and pullet weigh each, for show purposes? T. M. W.

West Scarborough, Me.

Answer:—1. A cold. Give each bird a teaspoonful of lard and kerosene twice a day for three or four days. 2. Milk should not produce this effect. Milk is splendid for fowls, but for best results beef scraps should also be fed. 3. This is usually liver trouble. Give one of Carter's Little Liver Pills once a day for three days. If taken in time this usually effects a cure. 4. Unless your fowls have free range where they can pick up considerable feed, you do not feed enough. For 100 head you should feed at least 8 quarts, and for best results fowls should be fed three times a day. We have got good results from the following: In the morning, feed boiled oats, mixed to dry crumbly state with bran and clover meal or alfalfa meal; also add beef scraps or beef meal. At noon whole wheat, scattered in the litter; at night, corn, oats and wheat mixed, unless the weather is very cold, when we give them a full feed of whole corn. 5. Cockerel, 7½ lbs.; pullet, 5½ lbs.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your next issue the following question: I had a Barred Plymouth Rock hen that had a hard bunch in the bowels; did not sit in a natural position, but sat tipped back. I killed her and on opening found the bunch was the gizzard, which had got out of place. Will you kindly explain, if possible, cause and give remedy, if there is any. C. B. M.

Lyndonville, Vt.

Answer:—This was probably caused by injury of some character or by the hen becoming over-fat. There is no remedy for this trouble.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please let me know through the next issue of your poultry journal if sorghum seed and kaffir corn are good feed for hens. J. F. F.

St. Joseph, Mo.

Answer:—The two seeds are very good for fowls when fed in combination with others grains, such as wheat and oats.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following questions through the Question and Answer columns of the AMERICAN POULTRY JOURNAL. What difference is there between the Buff and the Bourbon Red Turkeys, in regard to color, markings, weight, etc. J. W. M.

Smithboro, Ill.

Answer:—Buff Turkeys and what some people call Bourbon Reds are one and the same. The Standard only recognizes the Buff Turkeys.

Editor AMERICAN POULTRY JOURNAL.

Neuralgia And Other Pain.

All pain in any disease is nerve pain, the result of a turbulent condition of the nerves.

The stabbing, lacerating, darting, burning, agonizing pain that comes from the prominent nerve branches, or sensory nerves, is neuralgia, and is the "big brother" of all the other pains.

Dr. Miles' Anti-Pain Pills rarely ever fail to relieve these pains by soothing these larger nerves, and restoring their tranquility.

Dr. Miles' Anti-Pain Pills leave no bad after-effects, and are a reliable remedy for every kind of pain, such as headache, backache, stomachache, sciatica, rheumatism and neuralgia.

They also relieve Dizziness, Sleeplessness, Nervousness, Car-Sickness, and Distress after eating.

"For many years I have been a constant sufferer from neuralgia and headache, and have never been able to obtain any relief from various headache powders and capsules, until I tried Dr. Miles' Anti-Pain Pills. They always cure my headache in five minutes time." FRED R. SWINGLEY, Cashier 1st Nat. Bank, Atkinson, Neb.

Dr. Miles' Anti-Pain Pills are sold by your druggist, who will guarantee that the first package will benefit. If it fails he will return your money. 25 doses, 25 cents. Never sold in bulk. Miles Medical Co., Elkhart, Ind

in the morning and all seemed to be enjoying their breakfast, when almost instantly and apparently without pain, or cause, one of my nicest and most promising cockerels fell over dead. As I am an amateur and a subscriber of the AMERICAN POULTRY JOURNAL, I take the liberty to ask through your Question and Answer column what caused the death of this chicken.

R. R. A.
Norwood Park, Ill.

Answer:—Cases of this kind are very rare and it is almost impossible to tell the cause. Of course, it is an affection of the heart of some character, but it is impossible for us to say what brought it about.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer through your Questions and Answers Department. We have a Barred Rock hen molting. She eats good, yet in eating it hurts her and causes her to cough. They have free range, good dry coop and scratching shed. We feed cracked corn, oats, bran mash and soaked bread. Kindly tell me what the trouble is and the remedy for it.

N. J. E.
Buffalo, N. Y.

Answer:—Your hen is evidently affected with bronchitis. There are a great many remedies for this, and we believe that the inhaling of steam is about the best. This is done by holding the head of the fowl over a kettle of boiling water and letting the fowl breathe the warm steam. A few drops of carbolic acid added to the water is recommended by some writers. The vapor from burning tar is also good. This is done by placing a hot brick in the roosting room and pouring the tar on it. The fumes from this will be inhaled by the fowls on the roost, and is very beneficial in cases of this character.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I have a B. P. R. cockerel that has sores on his head, one in corner of mouth, at base of comb, on the wattles, and on one eye. The one on the eye has healed and has grown the eyelids together. The sore seems to be in sections like a wart. Can you tell what it is, cause and cure? If I should open the eye, what could I do to prevent the lids from growing together again?

H. O. C.
Zanesville, Ohio.

Answer:—Your cockerel has chicken-pox. Wash the sores with warm, soapy water until crust is soft enough to remove without causing the blood to flow, after drying thoroughly with a soft woolen cloth, apply carbolated vaseline or sulphur ointment.

CERTIFICATE OF SALE.

This is to certify that we have sold the Silver Penciled Wyandotte cockerel, winner of first prize at Madison Square Garden, New York, 1905, to Edward Oyster, of Strawberry Ridge, Pa. Also four excellent hens of the best quality. Excellent results must come from this pen.

Prices Reasonable.

EDWIN W. STAEBLER

36 Tremont St., Cleveland, Ohio

A trio that sings success to poultry raisers. Pratts Poultry Food—Pratts Roup Cure, Pratts Lice Killer. Do you know them?

HEAT KEPT RIGHT

The HATCH-ALL just keeps up an even 103 degree heat each hour, each day, until 21 days are counted—then the shells begin to crack and a high percent of lively chicks start out to live, grow and make money for you. The

HATCH-ALL INCUBATOR

owes its success to its unique and practical ventilation and heating systems; to its triple walls; and most of all to its "no-worry" regulator, which keeps the heat in the boiler at an even blood-heat average. 12 oz. copper boiler can't rust or leak. The easily removed chick trays make cleaning easy. Write us now, get our free catalogue, and learn how to lay up chicken money.

HEBRON INCUBATOR COMPANY
Box 10, Hebron, Neb.

C. S. NEWSOM, Athens, Ohio,

Has the honor of solving the "Dead in the Shell" problem. Wonderful. Write.

AMERICAN BREEDERS' ASSOCIATION.

Breeders are naturally divided into four classes: the breeders of horses, the breeders of other domestic animals, the breeders of poultry, and the breeders of poultry, and the breeders of poultry. Now, I am a knocker, I suppose, according to Mr. Morse's article, but I have the facts to show for what I say and am open to conviction if the readers of plants. The one object of all is the highest degree of excellence. Each class has particular points of excellence for which it works. The laws of heredity are the same for all, but each studies chiefly those which are involved in its own sphere, to the neglect of others which might greatly aid it.

All breeders may again be divided into two general classes, the scientists, and practical men—the men whose mode of life and point of view are those of the scholar, and those who, by force of mind and muscle and the knowledge of a few facts obtained in the field, strive for concrete results. In this division too, each class has a knowledge of facts which the other has not.

For some time the American Association of Agricultural Colleges and Experiment Stations has had in view the idea of bringing all these classes together so that each might have the benefit of the knowledge and experience of all the others. Accordingly, on Dec. 29, 1903, pursuant to a call issued by it, forty or fifty gentlemen, interested in the improvement of plants and animals, met in St. Louis to organize an association of plant and animal breeders. Thus was formed the American Breeders Association, with the following officers: President, Hon. James Wilson, secretary of agriculture, Washington, D. C.; vice-president, Hon. L. H. Kerrick, Bloomington, Ill.; secretary, Prof. W. M. Hays, assistant secretary of agriculture, Washington, D. C.; treasurer, Prof. Oscar Erf, Manhattan, Kansas.

The second meeting was held at Champaign, Ill., February 1, 2 and 3, 1905. The sessions were held in Morrow Hall in the Agricultural Building of the University of Illinois.

At both of these meetings there were given a number of interesting and instructive addresses by leaders in the different branches of breeding. The report of these two meetings is given in a very neat cloth bound book of 144 pages, 6x9 inches, and the book itself is well worth the annual membership fee.

In the classified list of over 700 charter members, there appears the names of only 17 poultry breeders. My object in writing this is that in the next annual report the list may be much enlarged. We cannot afford to stay out. Send your name and address, state your line of breeding, and enclose one dollar, to W. M. Hays, Secretary American Breeders Association, Washington, D. C. C. G. POLLOCK, Blair, Neb.

Little Gem HATCHERIES
Cost only 30c each, and over 60,000 successful poultry raisers are now using them. This girl hatched 1769 chicks in them last year and raised 151. Interesting catalogue free. F. GRUNDY, Poultry Expert, Morrisonville, Ill.

THIS MODEL POULTRY PLANT
operated by the Columbia School of Poultry Culture, Waterville, N. Y., is covered with Paroid Roofing. Here is what they say about it:
"We are sending you photograph of our buildings covered with your Paroid Roofing. This material is giving us excellent satisfaction and we are very glad to extend to you the privilege of using the illustration."

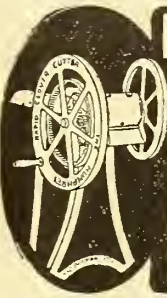

PAROID ROOFING

has no equal as a durable, economical roofing. Used by thousands of poultrymen and farmers for roofing and siding all classes of buildings. Any one can lay it (roofing kit free.) Slate color—contains no tar, does not crack or run—does not taint rain water—keeps buildings warm and dry—resists fire, water, heat, cold and gases.

Send for Free Samples and name of nearest dealer and investigate for yourself. For two 2c stamps we'll send new book of poultry house plans.

F. W. BIRD & SON, (Established 1817.)

Originators of complete roofing kit, fixtures for applying in every roll.
East Walpole, Mass. Chicago, Ill.

For Big Poultry Results

Feed cut clover or alfalfa—the cheapest and most productive poultry food for winter feeding. Great for all poultry—especially ducks. Don't buy so-called "clover-meals"—half dirt and dust. Cut it yourself with a new

HUMPHREY Rapid Clover CUTTER.

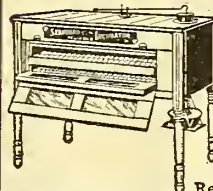

Cuts finer, more rapidly and more easily than any other. Fine enough for young chicks—no pieces over 1/8 inch. Double knives, strong and durable. Unlike any other.

Send to-day for "Poultry Helps," Humphrey's new book of Poultry Specialties. It's free and it's all right. Address
HUMPHREY, New Street Factory, Joliet, Illinois.

Built Right-Works Right

The 1906 Standard Reliable Incubator is the product of nearly a quarter century of successful incubator building. The principles of its construction have been successfully demonstrated beyond question. They are in accord with the most advanced scientific and practical ideas and the most direct and simple application of the laws of successful incubation

The 1906 Reliable Incubator

has many features you ought to know about. The double heating system which, besides being more economical and using one-third less oil for heating, preserves absolutely uniform temperature and supplies perfect ventilation. There are no draughts, no hot spots, no cold air but a steady even degree of heat that produces successful hatches every time. Remember our positive guarantee goes with every Reliable incubator. If it doesn't do as we say we'll refund your money—we know it's reliable because it's right. Send for free catalog. Pure bred poultry and eggs from Reliable Farm. Shipped everywhere. Get prices. Reliable Incubator and Brooder Co. Box A 1, Quincy, Ill., U.S.A.

PRUSSIAN POULTRY FOOD

A 25c package makes 750 feeds. If you once try it, you'll never be without it.

A Noted Poultry Authority Testifies.

Prussian Poultry Food is a good thing as our hens are looking so well and they continue to lay. I have heard several good words for Prussian Poultry Food while on my Institute Tour. People say that it keeps the fowls well.—IDA TILSON, of the Minnesota Institute Corps, West Salem, Wis.

HEALTHY FOWLS, HEAVY LAYERS,

industrious hens, rapid growth of chicks, are the results of feeding Prussian Poultry Food. It keeps things going in the poultry business. "Poultry Profits," a perfect guide to poultrymen and owners of live stock, mailed free if you write what stock you own and where you saw this offer.

Pkgs. 25c and 50c; Pails, 25 lbs. \$3.50.

For Lice, Mites, and vermin use Prussian Lice Killer (liquid), 50c and \$1.00, or Prussian Lice Powder, 25c and 50c.

Prussian Remedy Co., Dept. A St. Paul, Minn.

If you are looking for a brooder that is a success from the start, that will enable you to have enough of them to properly care for your chicks, and will not cramp your purse, that is easy to clean, and one that applies the heat direct to the backs of the chicks. Send for free catalogue to the

PERFECT BROODER SHOP - - - CELORON, NEW YORK

System in Poultry Practice BY JAMES Shackleton.

30 Chapters, 147 Pages, One Dollar, Postpaid.

May 1, 1905. Sales of this book since Sep. 1, 1904—eight months—are larger than for preceding 18 months. It is meant to appeal to common sense and evidently succeeds, for increase is chiefly in places where it has gone before. California always took more than any other state, and now takes more than any other three. Canada has many and now takes more than any state but California. Even Australia takes many. This book has been sold in every state of the Union, except two southern states, and Alaska. In Canada, Newfoundland, P. E. Island, New Brunswick, Nova Scotia, Quebec, Ontario, Manitoba, Assinibola, Alberta, British Columbia and Vancouver Island. In Cuba, Hawaii, Philippines. In England, Belgium, Germany, Australia, New Zealand and China. It is meant to be of equal value in every climate, for whatever purpose fowls are kept, and evidently is so regarded. Sales are increasing rapidly everywhere. Enthusiastic testimonials are plentiful.

The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON, Box A 12, Milburn, New Jersey

HOUDANS!

Rigg's HOUDANS have been line-bred since 1874. It is a thoroughly established strain, unapproached in size, style and finish. Acknowledged by all breeders to be the standard of Houdan excellence in America.

Large of size, extremely vigorous and wonderful egg producers. Have won more prizes in the show room than all other strains combined. Exhibition and breeding stock at prices representing their value. A positive guarantee given in each case.

WHITE WYANDOTTES

The demand for White Wyandottes has been so heavy that at this early date we are sold out of surplus stock. The breeding stock we have retained for the coming season are White Wyandottes as White Wyandottes should be.

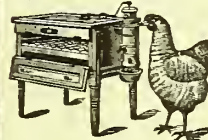

THOS. F. RIGG IOWA FALLS, IOWA

START A BUSINESS OF YOUR OWN

The only way to start a business is to scratch right around and start it. Make a business for yourself by raising poultry. You can start without even the semblance of a chick on the premises and in a few weeks have the place swarming with them. Raising broilers for early market is one of the most profitable sources of revenue for the poultryman. Even if you have only a small patch of ground you can add to your income. Some have made an excellent start by hatching their first crop in the cellar during the cold months of February and March.

THE Wooden Hen

\$12.80

and a setting of 200 eggs will start you, and the first hatch will pay all expenses if sold for broilers, or will form the basis of a large poultry farm. The Wooden Hen is the best known low-priced incubator on the market, and is guaranteed to hatch every fertile egg. This hatcher will put you in the way of making money in poultry raising, either as a side line or as a permanent business. The Wooden Hen is the peer of any hatcher at the price, and is better than dozens of high priced incubators.

It Will Hatch Every Fertile Egg

Begin to-day by writing for free catalogue and full information regarding the growing of incubator chicks for market.

CEO. H. STAHL, Quincy, Ill.

EGGS FOR INCUBATORS.

If you are in need of any eggs for broilers let me supply you. I can furnish you eggs from the following breeds at \$4 per hundred. Buff or White Wyandottes, Barred or White P. Rocks. All pure bred and vigorous stock. You know as well as I do that the above are without doubt the best breeds for broilers. Write for prices on young stock.

F. W. OWENS RICHWOOD, OHIO

TRAP NESTS

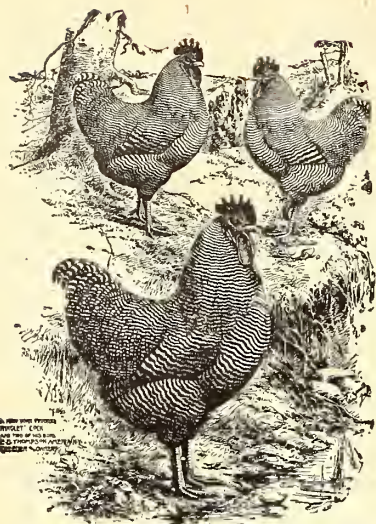

Show which Hen laid the Egg

1900 The "Ideal" is King. 1906

Cost small. No freight. Circular will interest. Write to "the originator of practical trapnesting."

F. O. WELLCOME
York St.,
Yarmouth, Maine.

THE IDEAL

A "Ringlet" 1st Prize New York Cock and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation, Madison Square Garden, New York, January, 1903.

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

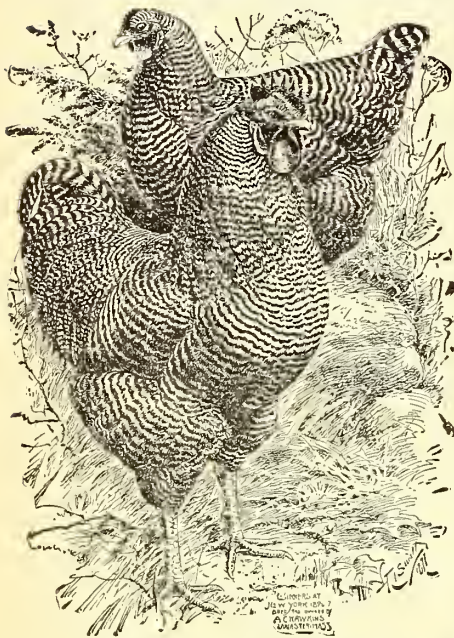

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 87 prizes. 36 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

E. B. THOMPSON, Lock Box 510, Amenia, Dutchess Co., N. Y.

Winners at New York, from Life.

HAWKINS'

ROYAL BLUE STRAIN

PLYMOUTH ROCKS

BARRED, WHITE AND BUFF.

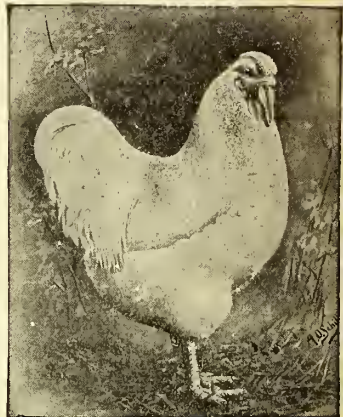

WYANDOTTES, Silver White and Buff.

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others.

My matings this season are the best I ever owned.

At New York, in the largest show of Barred Rocks ever seen, 451 Birds, I won 1st, 2d, 3d and 4th Cockerels; 1st, 2d and 3d Pullets; 1st and 3d Cocks; 1st and 2d Hens; 1st and 2d Breeding Pens. My other varieties are of the same high quality. Hundreds of choice exhibition and breeding birds at honest prices. EGGS from Prize Matings: One setting, \$5.00; two settings, \$8.00; three settings, \$10.00; five settings, \$15.00. \$20.00 per 100. Catalog of America's finest Plymouth Rocks and Wyandottes free.

A. C. HAWKINS, Lock Box 25 Lancaster, Mass.

First Cockerel at New York.

Buff Wyandotte Facts

Chicago, 1902—1st cockerel, 5th pullet, 4th pen, two specials.

Nunda, 1902—1st cock, 2d cockerel, 2d, 3d hen, 2d, 3d pullet, 2d, 3d pen, \$35 gold sweepstakes.

Chicago, 1903—2d pullet, 4th hen, 4th cock, 4th cockerel, 3d pen, five specials.

Indianapolis, 1903—1st cock, 1st cockerel, 1st, 2d pullet, 1st, 2d hen, 1st pen, 3 specials.

Chicago, Dec., 1903—1st cock, 1st, 3d, 4th hens, 1st pen, \$25 cup display.

St. Louis World's Fair—On 8 entries we beat the "World's Best," winning 1st, 2d cock, 3d hen, 6th chl., 6th pen. A remarkable victory.

Chicago, Dec., 1904—Five 1sts, four 2ds, three 3ds, three 4th, one 5th, \$25 cup display.

Chicago, Jan., 1905—1st, 5th cock, 1st hen, 1st pullet, 3d 4th cockerel 1st pen, American Buff Wyandotte Club cup display, and special best colored female. We were selected from the thousands breeding Buff Wyandottes as having the best, to make the only exhibit at World's Fair, St. Louis, and our stock was shown there during the entire exposition.

WE HAVE PROVED OUR STRAIN BEST. We are not going to exhibit this season, but give our entire time and attention to preparing our stock for sale. We shall condition a large number of show birds, and can supply specimens fit to win anywhere. Breeding hens mated to produce high-class stock our specialty. We solicit your inquiry and are always pleased to quote prices.
